TERMS AND CONDITIONS OF SALE

PRICES:

- All prices are quoted in U.S. dollars, F.O.B. Kalispell, Montana and are subject to change without notice. The invoiced price per plant depends upon the number of plants ordered of a species and size on an individual order and delivered in one shipment to the same location. See Page 3 for specific pricing instructions.
- A two percent discount on plant material is offered to those with established credit who pay in full within 10 days of the invoice date (this does not apply to purchases made with credit cards).
- All payments go toward **interest, freight, then the oldest** invoices remaining (in that order).
- Special handling is charged at cost; **see Cancellation and Restocking Fees on Page 3.**
- Glacier Nursery, LLC, charges freight on behalf of our carriers. A minimum freight charge of \$275.00 will apply to orders we deliver through our carriers. Freight on deliveries will be computed on each individual truck and will be based on the volume of each customer and reflect rates at the time of shipment. Discounts are not offered on freight and all payments are applied toward freight first.
- Volume Rebate is offered on the amount of the purchases made during the calendar year; see Rebate/Discount Schedule on Page 4.
- Interest of 1.5 percent per month equaling an annual rate of 18 percent (or the maximum allowable rate) will be charged on all accounts past 30 days. We appreciate your prompt payment.
- Prices in this catalog are effective for plants delivered after January 1, 2023.

TERMS:

- Customers should anticipate paying in advance, a week prior to shipment, until payment terms are established with completion of a credit application.
- Terms of 30 days net, from date of invoice, are extended to customers with established credit.
- Nursery stock travels at purchaser's risk and expense. Our responsibility ceases upon delivery to the carrier.
- Glacier Nursery, LLC, retains a vendor's interest in all goods until such goods have been paid for in full.
- Any legal actions by Glacier Nursery, LLC, shall be initiated in the jurisdiction of our choice. Glacier Nursery, LLC, will be entitled to all costs incurred enforcing this agreement, including attorney fees.
- A 50 percent deposit is required to hold stock for shipment or pickup after July 1, 2023. Trees held for pickup after July 1, 2023 with a deposit will be invoiced at the size they are at the time of delivery, not necessarily the size at which they were acknowledged. Deposits for plants held are applied to specific orders and will not be applied to any other orders, or to the account as a whole. Cancellation of the order will result in forfeiture of the deposit.
- We require a valid Montana State Nursery License to purchase plants. Available from Montana Department of Agriculture.

CLAIMS:

- Any claim regarding incorrect counts, breakage, or stock quality must be made in writing within 10 days of delivery of plants. Claims of stock viability for spring delivered material must be made no later than May 31, 2023. Claims for losses of goods while in transit must be filed with the carrier, not with Glacier Nursery, LLC. We will of course assist you, if necessary, in filing your claim with the carrier.
- We cannot be responsible for the results secured in transplanting.
- Credits for nursery stock will be issued as replacement plants. Those situations where replacement plants are impractical will be subject to receiving replacement plants the following year.

GUARANTEE: We accept orders subject to crop conditions and with the understanding that we may cancel a portion of the order should injury befall our stock from causes beyond our control such as frost, hail, windstorms, drought, or other weather conditions, errors in count, disease and insect injury, or other natural causes. We warrant, to the extent of the purchase price only, that nursery stock sold is in good healthy condition when leaving our nursery, is true to name, and as described within recognized tolerances. Seller gives no further or other warranty, expressed or implied, and will under no circumstances be liable for more than the invoice value at the time of purchase. This warranty is not transferable and is void if payment is not made in full when due for the full contract price of all nursery stock shipped.

ORDERS, PICKUP INFORMATION, AND PAYMENTS

PLANT PRICING: All prices are quoted in U.S. dollars, F.O.B. Kalispell, Montana and are subject to change without notice. The invoiced price per plant depends upon the number of plants delivered of a species and size on an individual order and delivered in one shipment to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing.

ORDERS: Orders are placed with a scheduled ship date at the direction of the customer. The customer is responsible for informing us in writing of changes to the ship date. If the shipment or pick up of an order is delayed 30 days or more past the scheduled ship date, we will attempt to contact those with orders in excess of \$1000 to reschedule. Orders totaling less than \$1000 will be automatically cancelled. Failure to respond to our request for a revised ship date will result in cancellation of the order. Orders with a ship date extended beyond July 1, 2023 will require a deposit.

PICKUP ORDERS: **A MINIMUM ORDER OF \$200 IS REQUIRED FOR A CUSTOMER PICKUP. Orders that do not total \$200 or more will be subject to a \$25 surcharge.** Customers picking up orders should arrive properly equipped with suitable tarps and rope to transport the stock. Failure to properly secure and cover your plants will nullify any guarantee of stock viability. **We require at least 24 hours advance notice so we may have the order assembled and ready for pick up.**

CANCELLATION AND RESTOCKING FEE: Plants that are readied and staged for shipping or pickup and subsequently cancelled less than 24 hours before scheduled pickup or delivery, or picked up by the customer and later returned will be assessed a 20 percent restocking fee. We begin covering our plants for winter during the third full week of October. Plants that are covered are unavailable for delivery or pickup.

CREDIT CARD PURCHASES: Customers with prepayment terms as well as those with established credit may use a Visa, MasterCard, or Discover Card to purchase plants at Glacier Nursery, LLC. For customers with prepayment terms who choose to pay with a credit card, payment is expected within one day of pickup or receipt of delivery; payments made after that time will be subject to a 2.5 percent service charge. For customers with established credit, credit card payments must be made within 10 days of invoice; credit card payments made after 10 days will be subject to an additional 2.5 percent service charge. Payments made with credit cards **are not eligible** for the two percent discount for payment within 10 days.

DISCOUNT FOR PROMPT PAYMENT: A two percent discount is offered on plant material to those customers with established credit and credit applications on file who pay in full within 10 days of the invoice date. All payments go toward the **oldest** invoices remaining. **Payments made with credit cards are not eligible for the two percent discount for payment within 10 days.**

ELECTRONIC PAYMENTS: Checks may be mailed or sent via text message and are electronically deposited the day they are received. We can also accept credit card information or an account and routing number for a bank account over the phone.

REBATE/DISCOUNT SCHEDULE

VOLUME REBATE PLAN: The Volume Rebate Plan has been revised for 2023 and is available to those who pay their accounts fully within 30 days of the invoice date **or** who pay **all** finance charges:

Total Volume of:	\$50,000 - 74,999	5%	\$125,000 - 149,999	8%
	\$75,000 - 99,999	6%	\$150,000 - 199,999	9%
	\$100,000 - 124,999	7%	\$200,000 and up	10%

The volume rebate will be computed on sales of plant material purchased in a calendar year. Those who do not pay in full within 30 days, do not pay all finance charges, or who make unreasonable claims will forfeit volume rebates. Rebate checks will be mailed before December 31 each year, or may be applied to your account as a credit for the following year. Volume rebate checks will not be issued for any account unpaid as of December 31, 2023.

EARLY ORDER PROGRAM WITH EXTENDED TERMS: If you find yourself ordering next year’s plants from this year’s order, consider the advantage of our Early Order Program. For all nursery stock ordered prior to September 30, 2022 and delivered between March 1, 2023 and May 15, 2023, customers will be included on the first allocation of plant material for the next season, and will receive 2022 prices for these orders. **Only orders placed by September 30, 2022 and shipped in full by May 15, 2023 will be eligible for the Early Order Program.** The previous discount based on volume will be discontinued in 2023 and beyond.

PLANT INFORMATION

ACCLIMATED PLANT MATERIAL: In many cases, climatic conditions determine the success and failure of plants in the landscape. It is our aim to offer the customer plants that have been grown in our nursery for a period of years and have thrived under severe changes of weather. Please contact us and we will be able to assist you in determining a plant’s suitability to your climate.

PICTURE TAGS: Picture tags are applied to plants bound for retail sales or per customer request. We do apply a “Grown in Montana” sticker to those plants that have been overwintered in Montana or have been spring planted and grown in the pot in which they are sold for three or more months. Our picture tags are purchased from suppliers and occasionally there is information on the tag that does not completely agree with our catalog descriptions. We may apply additional information stickers if the printed information is grossly inaccurate. We make every attempt to properly label all of our plants. If we should ever mislabel a plant, please notify us promptly and we will accept it for return and offer a full refund for the purchase price of the plant.

PLANTS PURCHASED FOR RESALE: Most of the deciduous trees, deciduous shrubs, and perennials we sell are overwintered at our nursery or have been grown in the pot in which they are sold for three months or more (two months for perennials). Most of our evergreens are grown by nurseries in our region; early spring shipments are generally overwintered here in Montana. We purchase plants for resale, paying strict attention to our sources both for plant quality and compatibility to our climate. We are more than willing to share information regarding the source of a plant purchased from Glacier Nursery, LLC. We have tried propagating almost every species we sell here at Glacier Nursery, LLC, at one time or another and have found that some species grow fine in Montana **but** are not suited for production growing in our climate, our soil types, our watering regimes, or cannot be grown profitably by us. What we have found is that our customers **expect** quality first and accept the reality that Montana may not be where their plant was originally propagated and subsequently grown. As previously stated ask us; we are more than willing to share the location of where our plants were grown.

A WORD ABOUT HOW OUR CATALOG IS CONSTRUCTED AND SHOULD BE USED

NOMENCLATURE: We use the *Manual of Woody Landscape Plants* by Dr. Michael A. Dirr (fifth edition) as our primary source for botanical and common names. For native plants we use the USDA NRCS Plant Database.

HARDINESS: We have made an attempt, based on our experience and input from other knowledgeable nursery persons, to provide information on how these many species may perform here in Montana. Our experience suggests most of Western Montana would be classed as Zone 4, while much of Eastern Montana would be Zone 3, and other parts of Montana (due to elevation and especially exposure) would be Zone 2. Glacier Nursery, LLC, is located in Zone 4. Severity of winter temperatures does not completely predict hardiness in a state susceptible to extreme temperature fluctuations. The earliest severe cold in the fall and the plants preconditioning to winter also dictate hardiness.

One qualification regarding hardiness recommendations—there are numerous microclimates, both less severe (for example, sheltered areas around homes) and more severe (exposed/barren sites), where we can see a zone of hardiness different than within the general area. Please determine the zone where the plants are to be placed and use the enclosed information to help your customers attain the optimal level of success with their planting.

DESCRIPTIONS: The descriptions and uses of plants are based on our observations and experiences and, of course, are subject to your interpretation.

SIZES: These are cultivated as an average for what these plants might be expected to achieve as mature specimens here in the Montana landscape. As such, there are plants that may be larger or smaller; consequently these sizes should be used as guidelines.

NATIVE PLANTS: Native to us means **native to North America**. See Pages 37, 68, 108, and 112 for a list of our native plants. A website that helps determine the distribution of a species is available from the USDA Natural Resources Conservation Service Plant Database: <http://www.plants.usda.gov>.

ORDERING HINTS: It is more economical to order in quantities of **5 or more** whenever possible. At the beginning of each of the four product groups in the catalog is information noting the dimensions of the pots, weight of the finished plant in those pots, and a **general description** of the size of the plant to expect at delivery.

CODE INFORMATION: To expedite ordering, use the plant codes in our inventory system that are included just beneath the plant description in this catalog. You will notice the species is the first of the three characters. The second and third characters are selected from the species and/or cultivar on all but perennials. For perennials, the second and third characters represent the common name. Multi-stem and single-stem trees and shrubs are differentiated by the suffix 3 or 1, respectively, in the three-character code.

FALL PLANTING PRECAUTIONS: Our experience suggests that extra precautions need to be taken to successfully plant in the fall in Montana. Fall planting may result in higher plant mortality than spring planting due to variable fall weather **and** the care taken at planting. All fall plantings require additional water **at planting** to settle the soil around the plants thus, eliminating air pockets and ensuring all the backfill and surrounding soils are saturated. **This needs to be repeated just before the ground freezes solid.** The following guidelines apply to the **minimum** volume of water required at each of these waterings: 10 gallons of water per caliper inch of the trees, 5 gallons of water per gallon of container.

Of additional concern, is that the plants need to be protected on the job site prior to planting. B&B material should be covered with wood chips or straw and watered. Container stock should be watered thoroughly and packed tight with the edges of the group insulated. All the plants should be stored on the ground, **not** on pallets, to avoid rapid freezing of the plants that happens when they are elevated above the ground. This will protect the plants from freezing rapidly or from drying out excessively. We would also recommend applying Wilt Pruf to all evergreens after planting to reduce the amount of moisture loss from the plant during the winter.

Any plant material that we need to special purchase for a fall planting should be in Montana by August 15 so it can acclimate to our colder climate. This will require a 50 percent deposit made on these plants by August 15 so that we can have them delivered to the nursery in a timely fashion. As in our normal policy, our plants are warranted to be alive at the time of shipment. Every fall and winter is different and the success or failure of planting in the fall depends very much on the weather: how early it freezes, how much moisture we have before it freezes, and how much snow, cold, and sunshine we have during the winter. **We cannot be responsible for plant survival after delivery and transplanting. We offer no guarantee that the plants will survive the winter and leaf out the following spring.**

HOW TO USE OUR WEBSITE

www.glaciernursery.com: To assist our customers, we have a website to help with plant purchases. To access the online availability, click on the “Wholesale Ordering” button on the homepage and enter in these general login credentials: **User Name: avail Password: gnursery**

The general login credentials only allow you to look at the current availability and price. If you want to order online, we ask you to fill out the one-time registration. To do this, login with the general login (User Name: avail Password: gnursery) and from there you will see a “Wholesale Registration” button. Complete and submit the registration forms. We will approve the registration and you will be able to start ordering online. From your account you will be able to look at current saved orders and past submitted orders.

Our availability is updated at least weekly. Our inventory numbers represent the present, not the future, so please contact us with orders that are for weeks or months in the future. Inventory is always changing, whether it is from the plants growing or orders being placed or adjusted. If you do not see what you are looking for on the availability list, feel free to give us a call, send us an email, or leave a comment in the ‘Order Comments’ box at checkout. We can let you know the status of that particular item. This is a quick and convenient way to order 24 hours a day. It is as easy as entering a number in the box to the right of the amount available and then adding it to your cart. Once you **submit** your order, you will receive an email confirmation and a call back from someone in the sales department confirming your order. We will not have a record of the plants you quoted unless you formally **submit** the order to us.

Another way to use the online ordering is for your bidding process when all you desire is an idea of what the plants will cost. Simply go through the ordering procedure and print your order out before submitting the actual order.

SUSTAINABILITY, MORE THAN A WORD TO US AT GLACIER NURSERY, LLC: Over the last 39 years we have instituted numerous cost saving procedures that also contribute to reducing our carbon footprint and allow us to operate in an environmentally friendly manner. Below are a list of the more significant procedures employed by Glacier Nursery, LLC.

- Reusing plastic pots that are returned from our customers (we pay four cents per gallon). Each year, over 60 percent of our plantings are into reused pots. Returns that are less than \$25.00 will not be credited to the account.
- Reusing all our cull and discarded plants by grinding them into compost, thus avoiding the need for topsoil and other potting media components that would need to be purchased and delivered.
- Chipping all our tree tops and eliminating plant material burning at Glacier Nursery, LLC. The chips are added to our potting mix. Diseased trees are chipped and disposed off site.
- Reusing all our runoff water from irrigation. None of our irrigation water drains off the farm; we reuse all runoff and mix the used water, after chlorine treatment, with fresh water in our irrigation system.
- Old pallets are dismantled and used as blocking on outbound shipments. Many of our outbound trucks return with the blocks that are used to stabilize the loads, reducing the need for new blocks.
- Cardboard boxes and pallets we receive with inbound plants are re-utilized as packing for outbound shipments. Used pallets and pots are made available to passersby on our highway frontage, keeping these products out of landfills.
- Pesticides and fertilizers are banded or applied on individual crops rather than broadcast applications. This reduces the quantity of pesticides and fertilizers used.
- We practice integrated pest management systems that reduce frequency of pesticide applications as well as minimizes the use of pesticides with a warning label.
- Use of electronic communication with customers for ordering, invoicing, and payments reduces paper usage and mail expenses.

SHADE, FLOWERING, AND FRUIT TREES

All plants are well branched and suited for either immediate sale in the retail yard or for planting into the landscape. Containerized plants are **established** and rooted into the media with roots to the edge of the plastic container. Potting media contains compost that helps retain moisture, nutrients, and reduces the number of plants that blow over in the wind. Below is a potting schedule guide:

- 4' trees are in #5 containers, 12" in diameter, 11" in depth; weighing ~ 25 pounds. Our most economical size. Lightly branched with four or more 12" or longer branches.
- 6' trees are in #7 containers, 14" in diameter, 11" in depth; weighing ~ 40 pounds. Generally 6' in height (species dependent) and nearing one inch caliper. Plants are not sized, therefore you pay one price for all plants of the same species in the same size container.
- 1.25" & 1.5" trees in #15 containers, 17" in diameter, 15" in depth; weighing ~ 100 pounds. 1.25" caliper and larger, trees have secondary branching and many are grown two growing seasons in the container, giving them a fuller appearance.
- #20 containers, 19" in diameter, 17" in depth; weighing ~ 140 pounds. Intended to be comparable in fullness to small B&B trees of the same size. Many are grown two growing seasons in the container.
- 1.75" & 2" and larger trees are in #25 containers, 23" in diameter, 18" in depth; weighing ~ 200 pounds. Our largest container plants, which are grown to be comparable in size and fullness to mid-range B&B trees, 2" in caliper size. Most are grown for two growing seasons in the container. Approximately half are upshifts from #15 containers and the other half are field grown transplants.

For pricing, consider both the caliper (1.25" and up) of the plant **and** size of the container it is growing in. **Container size is trade designation only.**

Generally, 1.75" to 2.25" balled and burlap trees are in 28" baskets and 2.5" to 3" trees are in 32" baskets. There are exceptions to this criteria, please inquire for specific ball sizes. A trunk protector is applied for protection during handling.

The invoiced price per plant depends upon the number of plants delivered of a species and size on an **individual** order and delivered in **one shipment** to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing.

Most of the trees are overwintered or have grown at Glacier Nursery, LLC for three months or more, though occasionally trees are purchased for resale to supplement plant availability. If you have any questions regarding the source of plants purchased from Glacier Nursery, LLC, feel free to ask, as we are more than willing to share that information with you.

5 - 24 25 - 49 50+ 1 - 4

PLANTING INSTRUCTIONS

It is imperative customers planting container trees remove the outer one inch of the root plug sides and bottom prior to planting. Cutting the root plug into a cube shape with a 12" wood pruning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

There are different guidelines for tree planting based on profession. Arborists differ from Landscape Contractors and Landscape Architects may differ from Nurserymen. Below are procedures that accommodate these differing professions. Dig the hole twice as wide as the container plug/root ball **but** only as deep as the root plug/ball. Preferably hand dig the last 3-6" so the root plug/ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom to the base of the tree trunk. Verify the top of the root plug/ball (as measured above) will be level, or slightly higher (3"), than the existing grade once placed in the hole. Trees are often killed, or have reduced vigor when planted too deep. Backfill with the native soil or a mix of one quarter to one half well blended soil amendments and native soil. Settle the soil with abundant water, mulch if desired, and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

For planting balled and burlap trees, follow the procedure outlined above. Additionally, handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment; this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters.

Abies - See Evergreens Page 70.

Acer ginnala, Amur Maple 15-20' Zone 3
Small tree or large shrub with exceptional fall color and interesting bark. Irregular habit. Useful for smaller areas, especially beneath overhead utility lines. Multi-stem plants are grown with three or more stems.

AG1	#7	SOLD OUT	
	#15	1.25"	129.00
	#25	1.75"	193.00
	#25	2"	225.00
AG3	multi-stem #1		9.50
	multi-stem #2		15.75
	multi-stem #5		25.25
	multi-stem #7	~3'	47.00
	multi-stem #15	4'	100.00
	multi-stem #15	6'	120.00
	multi-stem #25	8'	185.00
	multi-stem B&B	8'	270.00

More trees are planted too deep than too shallow. Avoid placing the container plug/root ball on disturbed soil that might allow the plant to settle from its original planting depth. For a complete description of how we recommend planting trees, see Pages 8, 9, and 38.

				5 - 24	25 - 49	50+	1 - 4	
<u>Acer glabrum</u>, Rocky Mountain Maple 20-25'								Zone 4
Native Maple with reddish colored twigs and red-tinted samaras. Yellow-orange fall color. Multi-stem form.								
AR3	multi-stem #1			11.00			13.00	
	multi-stem #5			29.25			33.25	
	multi-stem B&B	6'		105.00			112.00	
<u>NEW! Acer grandidentatum 'Schmidt'</u>, Rocky Mountain Glow Maple® 20-25'								Zone 4
Attractive small tree suited for planting location where mature tree height is limited. Selected from the Big Tooth Maple exhibiting yellow to orange-red fall color. A western 'cousin' of Sugar Maple.								
ARM	#25			225.00			232.00	
	B&B	2"		325.00			332.00	
<u>Acer negundo 'Sensation'</u>, Sensation Maple 30-40'								Zone 4
Slower and more controlled grower than the species. A uniform rounded habit with green foliage that turns to brilliant red in the fall. The bark has an attractive maroon hue in youth that adds winter interest. Seedless.								
ANS	#7			SOLD OUT				
	#15	1.25"		117.00			111.00

	5 - 24		25 - 49	50+	1 - 4
<u>Acer saccharum</u> ‘Green Mountain’, Green Mountain Sugar Maple 50-60’					Zone 3/4
Selection of Sugar Maple that does well in Montana. Thick, dark green foliage tolerates heat and wind. Fall color is an attractive yellow to orange. Large stately tree.					
AGM	#7	1” min	71.00		76.00
	#15	1.25”	129.00		135.00
	#25	1.75”	193.00		200.00
	#25	2”	225.00		232.00
<u>Acer saccharinum</u> ‘Silver Queen’, Silver Queen Silver Maple 40-50’					Zone 4
A vigorous grower. Foliage has light green surface with the underside having a silvery appearance. The foliage turns yellow in the fall. May experience tip dieback from winter.					
ASQ	#7	1” min	SOLD OUT		
	#15	1.25”	121.00		127.00
	#15	1.5”	146.00		152.00
<u>Acer tataricum</u>, Tatarian Maple 15-25’					Zone 3
Small tree or large shrub, similar to <i>Acer ginnala</i> in size and features. Dense habit, larger leaves with small lobes. Samaras have early red color followed by yellow-orange fall foliage color. As these are seedling grown, there is variation in habit, size of the lobes on the leaf, and in fall color. Tatarian Maple grows well as a single-stem and is probably a stronger growing plant, and more tolerant of alkaline soils than <i>Acer ginnala</i> . Multi-stem are grown with three or more stems.					
AT1	#7	1” min	66.00		71.00
	#15	1.25”	121.00		127.00
	#15	1.5”	146.00		152.00
<u>Acer tataricum</u> ‘GarAnn’, Hot Wings Tatarian Maple 15-20’					Zone 3
Small tree or large shrub, similar to <i>Acer ginnala</i> in size and features. Dense habit, larger leaves with small lobes. Improved selection of species and the samaras turn scarlet-red in midsummer providing an interesting contrast against the green background of leaves. Yellow-orange fall foliage color and a more uniform growth habit than species. Plant Select 2007. Excellent small tree for planting beneath utility wires and more tolerant of alkaline soils than <i>Acer ginnala</i> . Multi-stem are grown with three or more stems.

		B&B	2.5”	375.00		375.00	
<u>Aesculus glabra</u>, Ohio Buckeye 20-40’							Zone 3
Rounded habit. Early to leaf and just as early to defoliate. Yellow to orange to red fall color. Suited for large areas, but slow growing. Native to the Eastern United States.							
AGL		#7	1” min	66.00		71.00	
		B&B	1.75”	220.00		227.00	
		B&B	2”	250.00		257.00	
<u>Amelanchier laevis</u> ‘JFS-Arb’, Spring Flurry Serviceberry 25-30’							Zone 4
Medium sized tree for smaller residential lots or street tree plantings. Nice tidy habit and great abundance of short lived white flowers, clean medium green foliage, and yellow to orange fall colors.							
ASF		B&B	2”	295.00		302.00	
<u>Amelanchier laevis</u> ‘Rogers’, Lustre Allegheny Serviceberry 20-25’							Zone 4
Excellent uniform and upright habit in a small tree. Orange-red fall color. Use where a narrower, more controlled Serviceberry is desired. Grown only as a single-stem tree form.							
ALR		#7		62.00		71.00	
		#15	1.25”	139.00		145.00	
<u>Amelanchier x grandiflora</u> ‘Autumn Brilliance’, Autumn Brilliance Apple Serviceberry 20-25’							Zone 4
Great four season plant that is an improvement of the species because plants are uniform in habit. In spring stems are covered with white flowers, in summer purple-black fruit and brilliant orange-red color in fall. Winter character is fine in texture and interesting branching habit. Spreading, irregular rounded habit in youth. Multi-stem plants have three or more stems.							
AB1		#7		66.00		71.00	
		#15	1.25”	139.00		145.00	
		B&B	2”	295.00		302.00	
AB3	multi-stem	#7	~3’	57.00		62.00	
	multi-stem	#15	4’	95.00		101.00	
	multi-stem	#25	8’	185.00		192.00	
	multi-stem	B&B	8’	265.00		272.00	

More trees are planted too deep than too shallow. Avoid placing the container plug/root ball on disturbed soil that might allow the plant to settle from its original planting depth. For a complete description of how we recommend planting trees, see Pages 8, 9, and 38.

			5 - 24	25 - 49	50+	1 - 4	
<u>Betula occidentalis</u>, Water Birch or Western Birch 20-30’							Zone 3
Native Western River Birch with cherry-brown bark. Bark is slow to turn a gray/white color.							
BO3		multi-stem #1		SOLD OUT			
		multi-stem #5		28.25		32.25	
		multi-stem #7		SOLD OUT			
<u>Betula papyrifera</u>, Paper Birch 40-50’							Zone 3
Vigorous growing. Has an excellent white bark, though it is slow to turn white. One of the hardiest and longest lived Birches. Does well in varied soil types. Multi-stem has three or more stems. Native.

	B&B	2.25”	290.00		297.00			
<u>Gymnocladus dioica</u>, Kentucky Coffeetree				40-60’		Zone 4		
This dramatically coarse textured tree has few branches and takes years to fill out into an attractive specimen, but is worth the wait.								
GDI	#20	1.5”	195.00		202.00			
	B&B	2”	290.00		297.00			
<u>Hydrangea paniculata</u> ‘Limelight’, Limelight Hydrangea Single-Stem				6-8’		Zone 3		
Small tree form Hydrangea with lime-green late summer flowers. Use as an accent plant. Seed head attractive in winter.								
HL1	#7		95.00		100.00			
<u>Hydrangea paniculata</u> ‘Renhy’, Vanilla Strawberry™ Hydrangea Single-Stem				8-10’		Zone 3		
Small tree with white flowers, (vanilla), later changing to pink flowers, (strawberry), can be used as an small accent plant in the landscape. Attractive in winter with the dried flower head.								
HV1	#7		95.00		100.00			

Trees planted in irrigated turf benefit from allowing the turf to dry in September, then water the trees heavily before the ground freezes. This allows the trees to harden off for winter.

				5 - 24	25 - 49	50+	1 - 4		
<u>Maackia amurensis</u> ‘JFS-Schichtel1’, MaackNificent Maackia				20-25’					Zone 3
J. Frank Schmidt introduction. A vigorous grower with a vase shape growth habit. Green leaves with a silver pubescence and white spike-like racemes. Flowers in early summer.									
MMN	#7			71.00				76.00	
	#15			121.00				127.00	
<u>Maackia amurensis</u> ‘Summertime’, Summertime Maackia				15-20’					Zone 3
An interesting small hardy tree with green to brown bark. Leaves emerge with a unique silvery appearance and creamy white flowers in summer.									
MAS	#7			71.00				76.00	
	#15	1.25”		SOLD OUT					
It is imperative that customers planting container trees remove the outer one inch of the root plug sides and bottom prior to planting. Cutting the root plug into a cube shape with a 12” wood pruning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.									
<hr/>									
Crabapples									
<u>Malus</u> ‘Coralcole’, Coralburst Crabapple				8-10’					Zone 3
A very dense, rounded tree that is top grafted on a 42” stem. Green leaves, pink flowers and slow growing. Looks like a lollypop and adds a very distinctive look a small landscape.									
MCB	#7			66.00				71.00	
<u>Malus</u> ‘Dolgo’, Dolgo Crabapple				25-30’					Zone 2
A large, rounded, white flowering Crabapple. 1” diameter red fruit suitable for canning. Makes a very nice small shade tree and can be used beneath utility wires. Excellent hardiness. Green foliage and good disease resistance. Not an appropriate choice in high traffic areas where fallen apples could create a hazard.									
MD1	#7	1” min		58.00				63.00	
	#15	1.25”		111.00				117.00

	multi-stem #25	14’	225.00			232.00

It is imperative that customers planting container trees remove the outer one inch of the root plug sides and bottom prior to planting. Cutting the root plug into a cube shape with a 12” wood pruning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

	5 - 24	25 - 49	50+	1 - 4	
<i>Populus trichocarpa</i>, Black Cottonwood 60-75'					
Native Cottonwood. Not cottonless. Moisture tolerant, surviving in river beds. Large growing.					
PTC	#5	42.00		46.00	
	#7	SOLD OUT			
	#15	SOLD OUT			
<i>Populus x acuminata</i>, Lanceleaf Cottonwood 45-60'					
Hardy upright Cottonwood. Glossy dark green leaves and yellow fall color. Use in tough situations for instant shade as it grows very fast. This is not a seedless selection. Native.					
PAC	#7	SOLD OUT			
	#15	1.25"	111.00		117.00
	#15	1.5"	136.00		142.00
<i>Populus x canadensis 'Robusta'</i>, Robusta Poplar 45-60'					
A fast growing cottonless Cottonwood. Broad oval shape. A vigorous grower.					
PRB	#7	1" min	56.00		61.00
	#15	1.25"	111.00		117.00
	#15	1.5"	136.00		142.00
	#25	1.75"	175.00		182.00
	#25	2"	200.00		207.00
Planting Poplars and Cottonwoods should be avoided in late summer (mid-August/mid-September). Watering these selections heavily (10 gallons of water per 1" caliper) at planting, again in early October, and finally prior to freeze up will aid in a successful planting and overwintering.					

Peach

<i>Prunus x 'Contender'</i>, Standard Contender Peach (self-fruitful) 12-15'					Zone 4/5
This may be the hardest peach we can offer for the few peach growing areas of Western Montana.					
PCT	#10	SOLD OUT			

Fruiting Cherries

<i>Prunus 'Eubank'</i>, Sweet Cherry Pie Cherry (self-fruitful) 12-15'					Zone 4
Bright red sweet tasting fruit, but still a pie cherry. Sweet enough for fresh eating and great for jam, jellies and pies.					
PCP	#7	SOLD OUT			
<i>Prunus 'Evans Bali'</i>, Standard Evan's Bali Cherry (self-fruitful) 15-20'					Zone 3
Selected for good bud hardiness. Large red fruit that is one of the sweetest sour cherries.					
PBA	#7	1" min	58.00		63.00
<i>Prunus 'Lapin'</i>, Standard Lapin Sweet Fruiting Cherry (self-fruitful) 15-20'					Zone 5
Fruit is dark maroon, large and extremely juicy. This is one of the varieties commonly used in the orchards around Flathead Lake.					
PLA	#7	1" min	SOLD OUT		

	5 - 24	25 - 49	50+	1 - 4	
<i>Prunus 'Mesabi'</i>, Standard Mesabi Pie/Sweet Fruiting Cherry (self-fruitful) 10-14'					
A tree of pyramidal habit that is a self-pollinator. Fruit is similar to the <i>Prunus 'Meteor'</i> .					
PME	#7	1" min	58.00		63.00
<i>Prunus 'Meteor'</i>, Standard Meteor Pie Cherry (self-fruitful) 10-14'					
Produces large, bright red fruit that is somewhat tart. Makes good sauce or pie.					
PMT	#7	1" min	58.00		63.00
<i>Prunus 'Montmorency'</i>, Standard Montmorency Pie Fruiting Cherry (self-fruitful) 12-18'					
A vigorous grower producing large, tart red fruit. Fruit is firm and juicy and is good for pies or preserves. Most reliably hardy cherry we offer.					
PMO	#5	SOLD OUT			
	#7	1" min	58.00		63.00
	#15	1.25"	111.00		117.00

Pollination of Cherries - Eubank, Evans Bali, Lapins, Mesabi, Meteor, and Montmorency are self-fruitful, they do not require pollinators. For ideal pollination, plant two compatible varieties within 50 feet of one another.

Fruiting Plums

<i>Prunus 'Compass'</i>, Standard Compass Cherry Plum (self-sterile) 4-8'					Zone 3
Great for jams and sauces. Fruit is red in color. Clingstone. Good pollinator for other varieties.					
PCC	#7	SOLD OUT			
<i>Prunus 'Mount Royal'</i>, Standard Mount Royal Fruiting Plum (self-fruitful) 8-12'					Zone 4
Blue European Plum, good for eating right from the tree. Freestone.					
PMR	#5	SOLD OUT			
	#7		58.00		63.00
	#15	1.25"	111.00		117.00

<i>Prunus 'Pembina'</i>, Standard Pembina Fruiting Plum (self-sterile) 10-15'					Zone 3
Large, red fruit that is sweet and juicy. A good dessert plum. Clingstone.					
PPN	#7		58.00		63.00

<i>Prunus 'Pipestone'</i>, Standard Pipestone Fruiting Plum (self-sterile) 10-15'					Zone 3
A hardy plum that produces large, red, edible fruit. Ripens mid season. Good for jam and jelly. Clingstone.					
PPT	#7	SOLD OUT			

<i>Prunus 'Toka'</i>, Standard Toka Fruiting Plum (self-sterile) 15-20'					Zone 4
Good pollinator, apricot colored fruit. Clingstone. Vigorous grower.					
PTK	#7	SOLD OUT			

Pollination of Plums – Mount Royal is self fertile and does not require a pollinator. The remaining selections Compass, Pembina, Pipestone, Toka, and Waneta require a pollinator to maximize fruit production.

					5 - 24	25 - 49	50+	1 - 4		
<u>Prunus</u> ‘Waneta’, Standard Waneta Fruiting Plum (self-sterile)					10-15’					Zone 3
Large red fruit. Clingstone. Old, reliable selection.										
PWN		#7			58.00				63.00	
<u>Prunus maackii</u>, Amur Chokecherry					20-30’					Zone 2
Excellent four season small tree. Attractive early white flower, clean green foliage, black fruit that the birds enjoy and fantastic yellow fall foliage. Bark is very appealing, shiny brown to dark red, and exfoliating like Birch. Multi-stem grown with three or more stems.										
PM1		#7			58.00				63.00	
		#15	1.25”		111.00				117.00

		5 - 24	25 - 49	50+	1 - 4
<i>Pyrus ‘Summercrisp’, Semi-Dwarf Summercrisp Fruiting Pear (self-sterile)</i> 12-15’ Zone 4					
Proven hardy selection. Annual bearer produces 2½ -3” pear shaped fruit. Flowers early in May, harvest in mid August. Fruit green with a red blush. Use Parker as a pollinator.					
PSM	#7		61.00		66.00
	#15	1.25”	121.00		127.00
	#15	1.5”	136.00		142.00

<i>Pyrus ‘Ure’, Standard Ure Fruiting Pear (self-sterile)</i> 15-20’ Zone 3					
Hardy eating Pear. Greenish-yellow fruit approximately 2” in diameter. Flowers early May. Golden Spice is a good pollinator.					
PUR	#7		61.00		66.00
	#15	1.25”	SOLD OUT		

Ornamental Pears

<i>Pyrus calleryana ‘Chanticleer’, Chanticleer® Flowering Pear</i> 25-35’ Zone 5					
Narrow, pyramidal habit with white flowers in the spring. Dark green foliage in summer and reddish- purple fall color. One of the hardier selections of Callery Pear but still struggled at Glacier Nursery for many years before succumbing to winter damage. Frequently specified in Missoula plantings.					
PCH	B&B	1.75”	225.00		232.00
	B&B	2”	250.00		257.00
	B&B	2.25”	275.00		282.00
	B&B	2.5”			300.00

<i>Pyrus ussuriensis ‘Bailfrost’, Mountain Frost Pear</i> 15-25’ Zone 3					
Vigorous, upright growth habit makes for an improved Ussurian Pear selection. The clean, green, thick foliage provides a very tidy appearance in the summer.					
PUB	#7		SOLD OUT		
	#15	1.25”	SOLD OUT		

Pollination of Pears – Use two varieties.

<i>Quercus macrocarpa, Bur Oak</i> 50-70’ Zone 3					
Native to Montana, slower growing than other Oaks. Hardest Oak for Eastern Montana. Stately tree. Use in large spaces. Corky bark and branches add interest year round.					
QMA	#7		90.00		95.00
	#15	1.25”	129.00		135.00
	#15	1.5”	154.00		160.00

	#25	2”	225.00		232.00
	B&B	2.5”	325.00		325.00

At Glacier Nursery, LLC, we have found that we can improve the overwintering of tender species by stopping fertilization by the end of July, allowing the plants to be moisture stressed in September (achieving slight wilting by reducing irrigation), and abundantly watering after the first killing frost.

		5 - 24	25 - 49	50+	1 - 4
<i>Quercus x macdanielii ‘Clemons’, Heritage Oak</i> 40-50’ Zone 4					
Hybrid between <i>Q. macrocarpa</i> and <i>Q. robur</i> that has a pyramidal shape in youth and later broad rounded habit with thick green foliage. Vigorous grower.					
QMC	#10	140.00			145.00

<i>Quercus x warei ‘Long’, Regal Prince Oak</i> 40-50’ Zone 4					
Upright oval habit make this better in smaller planting areas than the larger <i>Quercus</i> . This is a hybrid of <i>Quercus robur fastigiata</i> and <i>Quercus bicolor</i> with a silvery underside of the dark green leaf. Suitable for many sites in Western Montana.					
QRP	#10		165.00		170.00

	#15	1.25”	<i>SOLD OUT</i>				
	#15	1.5”	<i>SOLD OUT</i>				
	#25	1.75”	<i>SOLD OUT</i>				
<i>Sorbus aucuparia</i>, <i>European Mountain Ash</i> 30-40’				Zone 3			
White flowers, orange fruit and an upright form describe this Mountain Ash. Robust growth rate. Multi-stem has three or more stems. Mountain Ash should not be over watered or planted on sites with poor drainage.							
SA1	#7	1” min	<i>SOLD OUT</i>				
	#15	1.25”	111.00				117.00
	#15	1.5”	136.00				142.00
	#25	1.75”	175.00				182.00
SA3	multi-stem #7		71.00				76.00
<i>Sorbus decora</i>, <i>Showy Mountain Ash</i> 20-25’				Zone 2			
Native to the Midwest and Northeastern U.S. Slow growing, red fruited Mountain Ash. Beautiful small tree useful in a small area. More resistant to sun scald, which can bother other Mountain Ash. Hardest of Mountain Ash grown at Glacier Nursery, Inc. Multi-stem forms have two or more stems. Mountain Ash should not be over watered or planted on sites with poor drainage.							
SD1	#5		48.00				52.00
	#7	1” min	61.00				66.00
	#15	1.25”	111.00				117.00
	#15	1.5”	136.00				142.00
	#25	1.75”	175.00				182.00
SD3	multi-stem #7		71.00				76.00
Mountain Ash should not be over watered, planted on sites with poor drainage, or planted deep. Planting slightly above grade (3-6”) allows excess water to drain away from the tree and is especially useful where turf watering continues late into the fall. Mountain Ash, in particular, can benefit from this practice.							
<i>Syringa meyeri</i> ‘<i>Palibin</i>’, <i>Dwarf Korean Tree Lilac</i> 3-4’				Zone 4			
Fine dwarf Lilac that is very floriferous at an early age. Fragrant violet-purple flowers and small dark green foliage. Not as vigorous or as hardy as <i>Syringa patula</i> ‘ <i>Miss Kim</i> ’ in Montana. Grafted on a 40” standard.							
SM1	#5		89.00				93.00
<i>Syringa patula</i> ‘<i>Miss Kim</i>’, <i>Miss Kim Tree Lilac</i> 4-6’				Zone 3			
Perhaps the very best of the dwarf lilacs, and a good four season plant. Fragrant pale lilac flowers in spring, dark glossy green summer foliage, burgundy fall color and an attractive winter habit. Hardy. More vigorous and adaptable in Montana than its close cousin <i>Syringa meyeri</i> ‘ <i>Palibin</i> ’. Grafted on a 40” standard.							
SK1	#5		89.00				93.00

				5 - 24	25 - 49	50+	1 - 4
<i>Syringa reticulata</i>, Japanese Tree Lilac 20-25'				Zone 3			
Attractive bark, creamy white flowers in June/July. Yellow-green fall color. Grown as both single-stem form (Ivory Silk) and a large specimen multi-stem shrub.							
SR3	multi-stem #7		57.00		62.00		
	multi-stem #15		102.00		108.00		
<i>Syringa reticulata</i> 'Ivory Silk', Ivory Silk Japanese Tree Lilac 20-25'				Zone 4			
Attractive small tree that is well suited to a small site. Large creamy white flowers in early July make this a distinctive plant in the landscape. Yellow-green fall color. Single-stem form.

	#25	2.5”	250.00	257.00
	#25	3”	275.00	282.00

A white PVC trunk protector is applied to all field grown Lindens in the fall to prevent sun scald.

More trees are planted too deep than too shallow. Avoid placing the container plug/root ball on disturbed soil that might allow the plant to settle from its original planting depth. For a complete description of how we recommend planting trees see Pages 8, 9, and 38.

	5 - 24	25 - 49	50+	1 - 4
<i>Ulmus americana</i> ‘Brandon’, Brandon Elm 60-70’ Zone 3				
Fast growing adaptable American Elm from Canada that possesses more of a compact growth habit. The coarsely toothed foliage is unique to its species. Use where Dutch Elm Disease is not a problem.				
UAB	#15	1.25”	111.00	117.00

B&B BALL SPECIFICATIONS

Caliper	Height	Ball Diameter	Approximate Wt. - Lbs
1.75"	5'	28"	425
2"	6'	28"	475
2.25"	7'	28"	550
2.5"	8'	32"	550
3"	9'	32-36"	680
3.5"	10'	32-36"	680
4"	12'	36-44"	950

The above is only a **guide**. Plant species, root mass, soil type, and especially soil moisture are contributing factors to ball size and weight in addition to tree caliper.

TREE PLANTING INSTRUCTIONS

It is imperative customers planting container trees remove the outer one inch of the root plug sides and bottom prior to planting. Cutting the root plug into a cube shape with a 12" wood pruning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

There are different guidelines for tree planting based on profession. Arborists differ from Landscape Contractors and Landscape Architects may differ from Nurserymen. Below are procedures that accommodate these differing professions. Dig the hole twice as wide as the container plug/root ball **but** only as deep as the root plug/ball. Preferably hand dig the last 3-6" so the root plug/ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom to the base of the tree trunk. Verify the top of the root plug/ball, (as measured above) will be level, or slightly higher (3"), than the existing grade once placed in the hole. Trees are often killed, or have reduced vigor when planted too deep. Backfill with the native soil or a mix of one quarter to one half well blended soil amendments and native soil. Settle the soil with abundant water, mulch if desired and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

For planting balled and burlap trees follow the procedure outlined above. Additionally, handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment; this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters.

SHRUBS

All plants are **established** and rooted into the media with roots to the edge of the plastic container. The potting media contains compost that helps retain moisture, nutrients and reduces the number of plants that blow over in the wind. All plants listed in the shrub section are multi-stem. Single-stem forms are listed in the tree section.

The invoiced price per plant depends upon the number of plants delivered of a species and size on an **individual** order and delivered in **one shipment** to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing. Below is a potting schedule guide:

9 to 12" shrubs are in #1 containers, 6" in diameter, 6" in depth; weighing ~ 6 pounds.

12 to 18" shrubs in #2 containers, 8" in diameter, 8" in depth; weighing ~ 10 pounds. Our #2 and #5 plants are listed without a height designation. Our sales staff can always provide you with information regarding plant size. Please do not hesitate to inquire about the current size of specific plant crops.

2 to 3' shrubs are in #5 containers, 10" and 12" diameter, 11" and 10" in depth; weighing ~ 25 pounds.

3 to 4' shrubs are in #7 containers (unless noted smaller), 14" in diameter, 11" in depth; weighing ~ 40 pounds. Approximately 3 to 4' in height (species dependent). Started from a transplant or a smaller size plant shifted into the larger container. A plant with many stems that provides an instant effect in the landscape.

4 to 6' shrubs are in #15 containers, 17" in diameter, 15" in depth; weighing ~ 100 pounds. Approximately 4 to 6' in height (species dependent). Many of the popular large growing shrubs are offered in a #15 container. These plants are large, full plants, that provide an instant effect in the landscape as a screen or an accent plant. Attributes of these #15 shrubs include vigorous growing plants that are well rounded and full to the base of the plant.

6 to 8' and up shrubs are in #25 containers, 23" in diameter, 18" in depth; weighing ~ 200 pounds. Approximately 6 to 8' in height (species dependent). These plants are tall, large, full plants, that provide an instant effect in the landscape as a screen or an accent plant. Attributes of these #25 shrubs include vigorous growing plants that are well rounded and full to the base of the plant.

There are exceptions to the above schedule, especially with those plants normally graded by width. Many #7 and #15 shrubs are sold with an (~) approximate height designation, **not** as an absolute measure. **Container size is trade designation only.**

Most of the shrubs are overwintered or have grown at Glacier Nursery, LLC for three months or more, though occasionally shrubs are purchased for resale to supplement plant availability. If you have any questions regarding the source of plants purchased from Glacier Nursery, LLC, feel free to ask, as we are more than willing to share that information with you.

SHRUB PLANTING INSTRUCTIONS

Disturbing the container root plug at planting will improve the vigor and longevity of the plant in the landscape. This can be accomplished by using a reciprocating saw with a wood pruning blade as we have described with tree planting. Alternative methods may include slicing the container plug across the plug and butterflying, opening the plant plug in the hole. Another method if the roots of the plug are not tightly circling is to shave down the sides of the plant plug loosening the soil and roots from the plug. These methods assist the plant in establishing into the native soil as well as avoiding circling roots that might constrict plant growth and cause a plant to fall over. Further tips for planting are covered on our website, within the Resources Tab.

Shrubs				
	5 - 24	25 - 49	50+	1 - 4
<u>Acer ginnala</u> , 'Amur Maple' - See Specimen and Container Trees, Page 9.				
<u>Acer ginnala</u> 'Bailey Compact', Bailey Compact Amur Maple 6-10'				Zone 4
Dense growing, rounded selection of species. Attains approximately one half or more the size of species. Useful as a dense screen or shrub border.				
AGC	#5	SOLD OUT		
<u>Acer glabrum</u> , Rocky Mountain Maple - See Specimen and Container Trees, Page 10.				
<u>Acer tataricum</u> 'GarAnn', Hot Wings Tatarian Maple - See Specimen and Container Trees, Page 12.				
<u>Alnus tenuifolia</u> , Thinleaf Alder 15-30'				Zone 2
Native Alder. Does well in wet areas. Upright oval habit. Suited for naturalized areas. Grown as a multi-stem.				
ATF	#1	9.50		11.50
	#5	SOLD OUT		
	#15	4'	SOLD OUT	
	#15	6'	SOLD OUT	
<u>Amelanchier alnifolia</u> 'Obelisk', First Editions® Standing Ovation Serviceberry 10-15'				Zone 2
A four foot wide variety of Serviceberry, especially well suited as a tall, narrow hedge.				
AAO	#2	20.00		23.00
	#5	31.50		35.50
<u>Amelanchier alnifolia</u> 'Regent', Regent Serviceberry 4-6'				Zone 2
A low growing, white flowering shrub that produces an excellent edible purple fruit. Also displays good fall color that ranges from yellow to maroon. Very hardy. An attractive plant for naturalization or massing. Birds enjoy the fruit and deer browse this plant as well. As a cultivar this offers uniformity of habit and size compared to species.				
ARG	#2	14.50		17.50
	#5	22.50		26.50
<u>Amelanchier alnifolia</u> , Saskatoon Serviceberry 6-10'				Zone 2
Native Serviceberry useful as a naturalizing or xeriscape plant. White flowers, yellow to orange fall color. Seedling grown, resulting in variations in habit such as width and height.				
AAL	#1	9.50		11.50
	#2	14.50		17.50
	#5	21.00		25.00
	#7	~3'	41.00	46.00
<u>Amelanchier x grandiflora</u> , 'Autumn Brilliance' - See Specimen and Container Trees, Page 14.				
<u>Amorpha canescens</u> , Leadplant 2-4'				Zone 4
More of an herbaceous perennial with a broad, rounded habit and gray-green foliage that contrasts with many other shrubs.				
ACS	#1	11.00		13.00

				Shrubs	41		
				5 - 24	25 - 49	50+	1 - 4
<u>Arctostaphylos uva-ursi</u> 'Massachusetts', Massachusetts Kinnikinick - See Perennials Page 85.							
<u>Aronia melanocarpa</u> 'Autumn Magic', Autumn Magic Black Chokeberry 3-5'							Zone 3
Fragrant white flowers in the spring give way to clusters of edible dark purple-black berries. Dark glossy leaves turn red and purple in the fall. More compact selection of the species.							
AAM	#2	15.75				18.75	
	#5	22.50				26.50	
<u>Aronia melanocarpa</u> 'Low Scape', Low Scape® Mound Aronia 1-2'							Zone 4
Low growing mounded habit. Tolerates a wide range of growing conditions.							
AME	#2	28.00				31.00	
<u>Aronia melanocarpa</u> 'Morton', Iroquois Beauty Black Chokeberry 2-3'							Zone 3
Starts with white flowers in the spring, black berries in the summer and ends in the fall with a wine-red color. Great in mass plantings. Very adaptable to both wet and dry conditions. Half sized version of <i>Aronia melanocarpa</i> var. <i>elata</i> .							
AMT	#2	15.75				18.75	
	#5	22.50				26.50	
<u>Aronia melanocarpa</u> var. <i>elata</i> , Glossy Black Chokeberry 4-8'							Zone 3
Noted for its brilliant deep maroon fall color, attractive purple-black fruit and dark green glossy foliage. A profuse suckering plant that will tolerate diverse soil types. Upright habit. Use in shrub borders or massed.							
AML	#2	14.50				17.50	
	#5	22.50				26.50	
NEW! <u>Aronia melanocarpa</u> 'Viking', Viking Black Chokeberry 5-6'							Zone 3
Large dark purple edible (tart) fruit. Attractive white flowers and red fall color that serves as a smaller shrub that will not grow large in the landscape. This selection is noteable for the large fruit that is high in antioxidants.							
AVK	#2	15.75				18.75	
<u>Artemisia cana</u> , Sagebrush 2-5'							Zone 3
Small mounding shrub, more upright than spreading. Native throughout the west. Drought tolerant.							
ACA	#1	11.00				13.00	
	#5	26.75				30.75	
<u>Artemisia tridentata</u> , Basin Big Sagebrush 4-8'							Zone 3
Silver-gray foliage, aromatic leaves and stems. Holds leaves late into season. Native plant to be used in a naturalized setting. Drought tolerant.							
ATD	#1	11.00				13.00	
	#5	SOLD OUT					
<u>Berberis thunbergii</u> 'Admiration', Admiration Barberry 12-18"							Zone 4
Orange-red foliage, throughout summer, make this unique amongst Barberries.							
BAD	#2	26.50				29.50	

42	Shrubs				
	5 - 24	25 - 49	50+	1 - 4	
<i>Berberis thunbergii</i> ‘BailErin’, First Editions® Limoncello™ Barberry 3-4’ Zone 4					
Yellow-green foliage with a red margin sets this tidy round Barberry apart from the rest. Use Limoncello flavored liquor in your mojitos as a substitute for lime juice and sugar.					
BTL	#2	26.50		29.50	
<i>Berberis thunbergii</i> ‘Concorde’, Concorde Barberry 2’ Zone 4					
Deep dark purple foliage and an upright habit distinguish this selection from the Crimson Pygmy, which is slightly larger at maturity.					
BCC	#2	26.00		23.00	
	#5	35.50		31.50	
<i>Berberis thunbergii</i> ‘Crimson Pygmy’, Crimson Pygmy Barberry 2-3’ Zone 4					
Dwarf form of Japanese Red Leaf Barberry with rounded habit. Good for foundation or hedge plantings. Use in protected locations.					
BCP	#1	10.25		12.25	
	#2	22.00	21.00	25.00	
	#5	26.75		30.75	
<i>Berberis thunbergii</i> ‘Gold Pillar’, Sunjoy Gold Pillar™ 3-4’ Zone 4					
Proven Winner selection similar to the Helmond Pillar Barberry, but with bright yellow foliage throughout the summer and showing some orange fall color.					
BGP	#2	26.50		29.50	
<i>Berberis thunbergii</i> ‘Helmond Pillar’, Helmond Pillar Japanese Barberry 4-5’ Zone 4					
Stiffly upright growing Barberry with red-purple foliage.					
BHP	#2	25.00		28.00	
<i>Berberis thunbergii</i> ‘Monlers’, Golden Nugget Dwarf Barberry 12” Zone 4					
A tidy dwarf Barberry with golden foliage. Makes a good contrast in the landscape.					
BGN	#1	11.25		13.25	
	#2	21.00		24.00	
<i>Berberis thunbergii</i> ‘Orange Rocket’, Orange Rocket Barberry 3-4’ Zone 4					
Upright Barberry with orange-red foliage color that deepens to dark red later in the summer. Can be used as a hedge plant.					
BOR	#2	23.00	22.00	26.00	
	#5	36.00		40.00	
<i>Berberis thunbergii</i> ‘Rose Glow’, Rose Glow Barberry 3’ Zone 4					
Dense, rounded habit with rose-red foliage mottled with cream colors.					
BRG	#1	10.25		12.25	
	#2	20.00	19.00	23.00	
	#5	26.75		30.75	

	5 - 24	25 - 49	50+	1 - 4	Shrubs	43
<i>Betula occidentalis</i>, Water Birch or Western Birch - See Specimen and Container Trees, Page 15.						
<i>Buxus</i> ‘Green Mountain’, Green Mountain Boxwood 4-5’ Zone 5						
A relatively fast growing, dense and upright Boxwood. Naturally cone-shaped. Use only in mild areas of Montana.						
BGM	#2	27.00		30.00		
<i>Buxus microphylla</i> ‘Wintergreen’, Wintergreen Littleleaf Boxwood 2’h Zone 4						
Hardy, slow growing evergreen with bright green summer foliage and copper-green foliage during winter.						
BWL	#2	27.00		30.00		
<i>Buxus</i> x ‘Green Velvet’, Green Velvet Boxwood 2-3’h Zone 5						
A slow growing, compact globe shaped broadleaf. It’s bright glossy-green leaves and tidy appearance create a formal aspect in the landscape. Use only in mild areas of Montana.						
BGV	#2	27.00		30.00		
	#5	44.00		48.00		
<i>Caragana arborescens</i>, Siberian Peashrub 15-20’ Zone 2						
Large growing shrub, yellow flowers, legume (so it has a pod), and small leaves that are not a nuisance in the fall. Use in shrub border, screen or windbreak. Extremely hardy and drought tolerant.						
CAR	#1	9.00	8.50	11.00		
	#2	14.50	13.50	17.50		
	#5	21.00	20.00	25.00		
	#7 ~3’	41.00		46.00		
<i>Caragana frutex</i> ‘Globosa’, Globe Caragana 2-3’ Zone 2						
Hardy, drought tolerant dwarf shrub. Slow growing rounded habit. Excellent medium green foliage in spring. Resistant to drought. Useful in xeriscape settings as a hedge or when massed.						
CFG	#2	23.00		26.00		
	#5	SOLD OUT				
<i>Caragana pygmaea</i>, Pygmy Caragana 3-4’ Zone 3						
Small light green leaves and thin twigs produce an interesting, fine textured, upright plant both in the summer and winter. Drought resistance and hardiness make this a useful plant in xeriscape plantings. Attractive small yellow flowers borne profusely. Good low growing hedge or massed planting.						
CPG	#2	20.00		23.00		
<i>Caryopteris</i> x <i>clandonensis</i>, Blue Mist Caryopteris - See Perennials Page 87.						
<i>Cercoarpus ledifolius</i>, Curl Leaf Mountain Mahogany 10-20’ Zone 4						
Drought tolerant, large native shrub with semi-evergreen foliage. Variable in size and habit.						
CCM	#1	11.00		13.00		
	#5	26.75		30.75		

		5 - 24	25 - 49	50+	1 - 4	
<u>Cercocarpus montanus</u>, Common Mountain Mahogany 4-8'						Zone 2
Native shrub with gray-green leaves. Variable in size and habit.						
CMN	#1	11.00			13.00	
	#5	26.75			30.75	
<u>Chrysothamnus nauseosus albicaulis</u>, Tall Blue Rabbitbrush 3-6'						Zone 3
Blue leafed version of species with late summer clusters of yellow flowers. Drought tolerant.						
CNB	#1	11.00	10.75		13.00	
	#5	26.75			30.75	
<u>Chrysothamnus nauseosus graveolens</u>, Tall Green Rabbitbrush 3-6'						Zone 3
Green leafed version of the species with late summer clusters of yellow flowers. Drought tolerant.						
CNG	#1	11.00	10.75		13.00	
	#5	26.75			30.75	
<u>Clethra alnifolia</u> ‘Hummingbird’, Hummingbird Summersweet 3-5'						Zone 4
Dark green foliage with attractive white flower spikes in the summer long after most shrubs have flowered.						
Tolerates shade and moist sites.						
CAA	#2	27.00			30.00	
<u>Cornus alba</u> ‘Argenteo-marginata’, European Variegated Dogwood 6-10'						Zone 3
A plant that truly stands in out in both summer and winter. Foliage is green with a creamy white margin.						
Winter stem color is a deep red making a nice contrast against snow. Use in shrub border or as an accent plant. It is quite dramatic against a dark colored backdrop.						
CAM	#2	15.75			18.75	
	#5	22.50			26.50	
<u>Cornus alba</u> ‘Bailhalo’, Ivory Halo Dogwood 5-6'						Zone 3
Similar to <i>Cornus alba</i> ‘Argenteo-marginata’, except more compact and finer texture. Slow growing. Use as an accent plant in a shrub border or massed in the landscape planting.						
CBH	#1	11.75	9.75		9.75	
	#2	20.75	16.75		17.75	
	#5	24.50	23.50		28.50	
	#7	~3'	44.00		49.00	
<u>Cornus baileyi</u>, Red Twiggged Dogwood 8-10'						Zone 3
Large growing, red stemmed Dogwood. White flowers and blue-purple fruit. Shade tolerant. Not as stoloniferous as <i>Cornus coloradensis</i> according to Dr. Dirr. Use in shrub border or for large areas. Not for confined locations.						
CSB	#1	9.00			11.00	
	#2	14.50			17.50	
	#5	21.00	20.00		25.00	
	#7	~4'	41.00		46.00	

		5 - 24	25 - 49	50+	1 - 4	
<u>Cornus sericea</u> ‘Allemans Compact’, Alleman’s Compact Dogwood 5-6'						Zone 3
Similar to the Red Osier except more compact form. Deep wine-red stem color. Excellent in mass planting.						
CAC	#2	14.50			17.50	
	#5	22.50			26.50	
<u>Cornus sericea</u> ‘Bailadeline’, First Edition Firedance Dogwood 3-4'						Zone 3
More compact selection of <i>Cornus bailey</i> . Similar in size to <i>Cornus s. ‘Isanti’</i> . Rounded habit.						
CFD	#2	24.00			27.00	
	#5	31.50			35.50	
<u>Cornus sericea</u> var. <i>coloradensis</i>, Colorado Red Osier Dogwood 8-10'						Zone 3
Native red stemmed Dogwood noted for its deep red to brownish stems. Very stoloniferous, hence, tough to confine in the landscape. White flowers and bluish-white fruit. Use in shrub borders.						
CSC	#1	9.00			11.00	
	#2	14.50			17.50	
	#5	21.00			25.00	
	#7	~4'	41.00		46.00	
	#15	~5'	80.00		86.00	
<u>Cornus sericea</u> ‘Flaviramea’, Yellow Twiggged Dogwood 6-8'						Zone 3
Yellow stem color makes this an interesting plant in the winter landscape. Green foliage during the summer. A large, rapid growing shrub for the border.						
CSF	#2	14.50			17.50	
	#5	21.00			25.00	
<u>Cornus sericea</u> ‘Isanti’, Isanti Dogwood 5-6'						Zone 3
A very desirable, dense and compact red Dogwood. Wide spreading, often as wide as tall. White flowers and white fruit. A nice addition to the landscape that can be used in the shrub border, massed as a hedge for winter effect or in a foundation planting because of its small size.						
CSI	#1	9.50			11.50	
	#2	15.75	14.75		18.75	
	#5	24.50	23.50		28.50	
<u>Cornus stolonifera</u> ‘Farrow’, Arctic Fire Dogwood 3-4'						Zone 3
A compact selection of Red Twiggged Dogwood. Similar in size to <i>Cornus s. ‘Isanti’</i> . Upright habit and less prone to sucker in the landscape.						
CFI	#2	24.00			27.00	
	#5	SOLD OUT				

Midsummer planting of *Cornus* (Dogwood), *Physocarpus*, *Potentilla*, and *Spiraea* may result in wilting due to inadequate moisture in the pot. To avoid this damage, water thoroughly in the pot and in the landscape after planting. Also, trim the tips of the plants removing 2-4 inches of the newest luscious growth.

		5 - 24	25 - 49	50+	1 - 4	
<u>Cotinus coggygria</u> ‘Royal Purple’, Royal Purple Smokebush		8-10’				Zone 5
Marginally hardy <i>Cotinus</i> that may experience winter dieback, but grows back quickly. Beige flowers in midsummer contrasts with the purple foliage. Upright habit.						
CRP	#2	31.00			34.00	
	#5	51.00			55.00	
<u>Cotoneaster apiculatus</u>, Cranberry Cotoneaster		2-3’				Zone 4
Dense mounded, low growing shrub with branches that arch over and touch the ground. Pink flowers in June, large red fruit in August/September. Hardy in protected locations.						
CAP	#2	26.00			29.00	
<u>Cotoneaster lucidus</u>, Hedge (Peking) Cotoneaster		6-10’				Zone 2
A very hardy shrub noted for its excellent maroon fall color and its persistent black fruit. Upright grower, small leaves, tolerant of shearing. Use as a hedge or shrub border.						
CLU	#1	9.00	8.50		11.00	
	#2	14.50	13.50	13.00	17.50	
	#5	21.00	20.00	19.00	25.00	
	#7 ~3’	41.00			46.00	
<u>Daphne x burkwoodii</u> ‘Carol Mackie’, Carol Mackie Daphne		2-3’				Zone 4
Dense mounded form with distinctive variegated foliage. Fragrant pink flowers in late spring. Prefers a cool, dry or well-drained site. Plant Select 1997.						
DCM	#2	35.00			38.00	
<u>Diervilla lonicera</u>, Dwarf Bush Honeysuckle		4’				Zone 3
Low growing, mounded, spreading shrub with bronze-green foliage and yellow flowers in early summer.						
DVL	#1	9.50			11.50	
	#2	15.75			18.75	
	#5	22.50			26.50	
<u>Elaeagnus commutata</u>, American Silverberry		6-8’				Zone 2
Attractive silver-gray foliage that is very unique in the landscape. Hardy. Native species through upper Great Plains and Canada.						
ECB	#1	11.00			13.00	
	#5	26.75			30.75	
<u>Euonymus alatus</u>, Winged Euonymus or Burning Bush		12-15’				Zone 4
Large dense shrub with exceptional red fall color that persists. Rounded habit with corky wings on the stem adding winter interest. Use in shrub borders, accent planting or hedges.						
EAL	#1	SOLD OUT				
	#2	15.75	14.75		18.75	
	#5	22.50	21.50		26.50	
	#7 ~3’	SOLD OUT				

		5 - 24	25 - 49	50+	1 - 4
<u>Euonymus alatus</u> ‘Compactus’, Dwarf Burning Bush 5-6’					Zone 4/5
Dwarf form of <i>Euonymus alatus</i> . Not as hardy a species.					
EAC	#1	10.50			12.50
	#2	17.75	16.75		20.75
	#5	26.75	25.75		30.75
	#7	51.00			56.00
<u>Forsythia</u> ‘Meadowlark’, Meadowlark Forsythia 8-10’					Zone 3
Flower buds hardy to -35°F make this one of the most reliable Forsythias for Northern landscapes. One of the earliest plants to flower in spring with yellow flowers appearing before the leaves. Use in shrub borders.					
FMD	#2	14.50			17.50
	#5	21.00			25.00
<u>Fothergilla gardenii</u>, Dwarf Fothergilla 3-4’					Zone 4
Slow growing rounded habit with showy white flowers in the spring, blue-green foliage in the summer turning to a vibrant red, orange and yellow in the fall. Resembles <i>Hamamelis</i> only smaller. Tolerates shade. This plant has really thrived in the landscape at Glacier Nursery, LLC, and warrants wider use in Montana.					
FGD	#2	28.00			31.00
<u>Holodiscus discolor</u>, Ocean Spray 4-6’					Zone 4
Western native similar to <i>Physocarpus</i> with a creamy white flower pinnacle that is initially held above the foliage, but later droops and remains showy even as it dries. Drought tolerant, but will grow larger with moisture.					
HDD	#5	26.75			30.75
<u>Hydrangea arborescens</u> ‘Annabelle’, Annabelle Hydrangea 3-5’					Zone 3
Shade tolerant, fast growing, herbaceous shrub. Large white flowers during summer that stand out in any landscape when few shrubs are flowering at the same time. An added bonus to this plant is that it will flower in the shade.					
HAA	#1	11.00			13.00
	#2	17.75			20.75
<u>Hydrangea macrophylla</u> ‘Bailmer’, Endless Summer Hydrangea 3-5’					Zone 4
Selection from Bailey Nursery that flowers on new and old wood all summer long. Flowers grow up to 8” in diameter with pink flowers in neutral or alkaline soils, and blue flowers in acidic soil.					
HES	#2	25.00			28.00
	#5	36.00			40.00
<u>Hydrangea macrophylla</u> ‘Twist-n-Shout’, Twist and Shout Bigleaf Hydrangea 3-5’					Zone 4
Flowering pink in the center of the corymb with pink or blue flowers on the edge of the corymb, depending on the soil type.					
HTS	#2	25.00			28.00

48	Shrubs				
	5 - 24	25 - 49	50+	1 - 4	
<i>NEW! Hydrangea paniculata ‘Bobo’</i>, Bobo Panicle Hydrangea 3’					
Half size selection of <i>Limelight</i> and <i>Berry White Hydrangea</i> .					
HPB	#2	23.00		26.00	
<i>Hydrangea paniculata ‘Limelight’</i>, Limelight Hydrangea 6-8’					
Shrub form with large lime-green late summer flowers. Tree form in tree section.					
HL3	#2	23.00		26.00	
<i>Hydrangea paniculata ‘Renba’</i>, Berry White Hydrangea 6-7’					
A hardy flowering <i>Hydrangea</i> that progresses from a white flower through shades of pink to red.					
HBW	#2	23.00		26.00	
<i>Hydrangea paniculata ‘Renhy’</i>, Vanilla Strawberry™ Hydrangea 6-8’					
Another Hydrangea selection, this one noted for its long lasting, large white flower heads that eventually turn strawberry-red in color. Tree form in tree section.					
HVS	#2	23.00		26.00	
<i>Ligustrum vulgare ‘Cheyenne’</i>, Cheyenne Privet 6-8’					
Large upright hedge. Rapid growing with multiple canes. Very dense in summer and winter. Toxic foliage and berries.					
LVC	#2	14.50		17.50	
<i>Lonicera involucrata</i>, Twinberry Honeysuckle 3-6’					
Native shrub with an upright habit. Tolerates shade. Light green leaf color and an interesting purple-black fruit.

	#5	SOLD OUT			
<i>Lonicera tatarica ‘Arnold Red’</i>, Arnold Red Honeysuckle 6-8’					
Resistant to Russian aphid. Blue-green foliage and dark red flowers. Use in shrub borders.					
LHA	#2	15.75		18.75	
<i>NEW! Lonicera ‘Honeyrose’</i>, Honeyrose Honeysuckle 8-10’					
Large growing shrub with blue green summer foliage and yellow fall color. Use in place of Arnold's Red.					
LHR	#5	21.00		25.00	
<i>Magnolia kobus var. stellata ‘Royal Star’</i>, Royal Star Magnolia 8-10’					
A hardy Japanese Magnolia with a smaller habit than the Merrill Magnolia. Pink buds emerge to fragrant white flower in early spring. Foliage is deep green turning to bronze color in the fall. Use only in mild areas of Montana.					
MGR	#5	65.00		69.00	
<i>Mahonia aquifolium</i>, Oregon Grape Holly 3-5'h, 3-6’ spread					
Broad leafed evergreen with holly-like leaves. Needs protection from winter sun and wind.					
MAQ	#5	39.00		43.00	

***Mahonia repens*, Creeping Mahonia** - See Perennials Page 96.

	5 - 24	25 - 49	50+	1 - 4	Shrubs	49
<i>Philadelphus lewisii ‘Blizzard’</i>, Blizzard Mockorange 4-5’						
A larger flowered Canadian selection of the native species. Use massed in a naturalized setting.						
PLB	#2	16.75			19.75	
	#5	24.50			28.50	
<i>Philadelphus lewisii ‘Cheyenne’</i>, Cheyenne Mockorange 6-8’						
A selection of the native Mockorange with up to 1¼” white flowers. Shade tolerant. Plant Select 2001.						
PCY	#1	SOLD OUT				
	#5	26.75			30.75	
<i>Philadelphus lewisii</i>, Lewis Mockorange 6-8’						
Native Mockorange use for naturalization. Shade tolerant.						
PLW	#1	SOLD OUT				
	#2	16.75			19.75	
	#5	26.75			30.75	
<i>Philadelphus microphyllus</i>, Littleleaf Mockorange 3-4’						
Small leafed native Mockorange that provides a fine texture in the landscape. Slow growing, rounded habit.						
PMC	#1	11.00			13.00	
<i>Philadelphus x ‘Buckley’s Quill’</i>, Buckley’s Quill Mockorange 4-6’						
Canadian selection with large (1”) double white flowers that have long narrow petals. Attractive green foliage. Slower growing than other selections and an attractive compact habit.						
PBQ	#5	SOLD OUT				
<i>Philadelphus x virginalis ‘Minnesota Snowflake’</i>, Minnesota Snowflake Mockorange 6-8’						
Hardest of the Mockoranges, having large, double white flowers 2” across that are very fragrant. Use in the shrub border or massed.						
PMN	#2	14.50			17.50	
	#5	21.00			25.00	
<i>Physocarpus monogynus</i>, Mountain Ninebark 3-4’						
Native shrub noted for attractive orange to red fall color. Will tolerate partial shade. Use in a naturalized situation.						
PCM	#1	9.00			11.00	
	#5	SOLD OUT				
<i>Physocarpus opulifolius ‘Dart’s Gold’</i>, Dart’s Gold Ninebark 3-4’						
Striking yellow foliage and an almost copper fall color makes this a true accent plant for summer and fall. Shorter growing than other Ninebarks.						
PDG	#2	15.75			18.75	
	#5	24.50			28.50	

Midsummer planting of *Cornus* (Dogwood), *Physocarpus*, *Potentilla* and *Spiraea* may result in wilting due to inadequate moisture in the pot. To avoid this damage, water thoroughly in the pot and in the landscape after planting. Also, trim the tips of the plants removing 2-4 inches of the newest luscious growth.

50

Shrubs

		5 - 24	25 - 49	50+	1 - 4
<i>Physocarpus opulifolius</i> var. <i>nanus</i>, Dwarf Ninebark 4-6' Zone 3					
Beautiful wine-red fall color saves this plant from total obscurity. Stems exfoliate, making an interesting winter character. Use in shrub borders or massed for naturalization. Shade tolerant. Similar to native species.					
PNA	#1	9.50			11.50
	#2	15.75			18.75
	#5	22.50			26.50
<i>Physocarpus opulifolius</i> 'Donna May', First Editions® Little Devil Ninebark 3-4' Zone 4					
Shorter growing burgundy foliage and pink-white flowers in the spring contrast against dark foliage make this Ninebark unique. The least hardy of the marroon-red Ninebark.					
POL	#2	26.00	25.00		29.00
	#5	34.00			38.00
<i>Physocarpus opulifolius</i> 'Monlo', Diabolo® Ninebark 8-10' Zone 3					
Robust growing, reddish-purple leafed form of species. Foliage emerges dark green and then turns reddish-purple. Use in the shrub border or as an accent plant.					
POD	#1	10.50			12.50
	#2	16.75	15.75		19.75
	#5	25.75	24.75		29.75
	#7	44.00			49.00
	#15	SOLD OUT			
<i>Physocarpus opulifolius</i> 'Seward', Summer Wine Ninebark 5-6' Zone 3					
This is a compact variety with dark crimson-red foliage. Flowers are white with a hint of pink in the summer and are very striking against the dark foliage. Ideal for small planter beds or landscapes.					
POS	#1	10.50			12.50
	#2	20.00	19.00		23.00
	#5	26.75	25.75		30.75
<i>Potentilla fruticosa</i> 'Abbotswood', Abbotswood Potentilla 2-3' Zone 2					
White flowering Potentilla with large flowers that are displayed for most of the summer. Bluish-green foliage and spreading habit. Use as facer plant or massed for mid season color.					
PFA	#1	9.00	8.50		11.00
	#2	14.50	13.50		17.50
	#5	21.00	20.00		25.00
<i>Potentilla fruticosa</i> 'Bailbrule', First Editions® Crème Brûlée™ Potentilla 3-3½' Zone 2					
Double white flowering Potentilla. Larger than Abbotswood.					
PCB	#2	15.75			18.75
<i>Potentilla fruticosa</i> 'Bailmering', First Editions® Lemon Meringue™ Potentilla 2-3' Zone 2					
Light, double yellow flowers with a compact habit.					
PLM	#2	SOLD OUT			
Potentillas can be pruned hard while dormant, removing up to half the growth. Most plants that flower on new wood perform well when trimmed. Similarly, for example, are Spiraea species.					

		5 - 24	25 - 49	50+	1 - 4	Shrubs	51
<i>Potentilla fruticosa</i> ‘Gold Drop’, Gold Drop Potentilla 2' Zone 3							
One of the shorter growing, smaller leafed Potentilla with intense yellow flowers borne all summer long. Use in mass or as a colorful facer plant.							
PGD	#2	14.50				17.50	
	#5	21.00				25.00	
<i>Potentilla fruticosa</i> ‘Goldfinger’, Goldfinger Potentilla 3' Zone 2							
Rounded compact habit with large 1½” yellow flowers covering the entire plant throughout summer. Considered one of the best selections because of the long period of flowering. Use as a facer plant or for massing of summer color.							
PGF	#1	9.00	8.50			11.00	
	#2	14.50	13.50	13.00		17.50	
	#5	21.00	20.00	19.00		25.00	
<i>Potentilla fruticosa</i> ‘Goldstar’, Goldstar Potentilla 2' Zone 2							
Low growing and spreading, wider than tall. Yellow flower similar to Goldfinger Potentilla. Large pubescent deep green foliage. One of the best of the low growing selections.							
PGS	#2	14.50				17.50	
	#5	21.00				25.00	
<i>Potentilla fruticosa</i> ‘Jackmanii’, Jackman Potentilla 3-4' Zone 2							
Large upright growing with deep yellow flowers. Largest leaf of the Potentilla we offer. Use as a facer plant or grouped in masses.							
PJK	#1	9.00				11.00	
	#2	14.50				17.50	
	#5	21.00	20.00			25.00	
<i>Potentilla fruticosa</i> ‘Katherine Dykes’, Katherine Dykes Potentilla 2-3' Zone 2							
Gray-green foliage, spreading habit and soft yellow flowers. Use as facer plant or massed. Similar to native species.							
PKD	#2	14.50	13.50			17.50	
	#5	21.00				25.00	
<i>Potentilla fruticosa</i> ‘Pink Beauty’, Pink Beauty Potentilla 2-3' Zone 3							
The best of the pink flowering selections. Holds the distinct pink color even in Montana's heat. Reasonably vigorous. Attractive, lustrous medium green foliage. Best flower color is achieved with light shade.							
PFP	#1	9.00				11.00	
	#2	14.50	13.50			17.50	
	#5	21.00				25.00	
<i>Potentilla fruticosa</i> ‘Tangerine’, Tangerine Potentilla 2-3' Zone 2							
Flowers are deep yellow in sun, almost orange in light shade. Spreading, sprawling habit. Use as a facer plant or massed for color.							
PFT	#1	9.00				11.00	
	#2	14.50				17.50	
	#5	21.00				25.00	

	5 - 24	25 - 49	50+	1 - 4	
<i>Potentilla fruticosa</i> ‘UMan’, Mango Tango Potentilla 2’					
Canadian bred, small growing Potentilla with orange and red shades over the deep yellow petals. Fades to yellow in intense sun.					
PFU	#2	14.50		17.50	
<i>Potentilla fruticosa</i> ‘Yellow Gem’, Yellow Gem Potentilla 1-2’					
A slow spreading, low growing (almost creeping), yellow flowered variety. Foliage gray and hairy.					
PYG	#2	14.50		17.50	
	#5	21.00		25.00	
<i>Potentilla fruticosa</i>, Native Yellow Potentilla 2-3’					
Irregular native Potentilla from which numerous selections have been made.					
PFR	#1	10.50		12.50	
	#5	SOLD OUT			
<i>Prunus americana</i>, American Plum 15-20’					
Widespread U.S. native. Large growing shrub excellant for wildlife habitat both as a food source and as shelter. Suitable pollinator for many fruiting plums.					
PA3	#1	10.50		12.50	
<i>Prunus besseyi</i> ‘Pawnee Buttes’, Pawnee Buttes Western Sand Cherry 1-2’					
Wide spreading, low growing version of species. Tolerant of dry soils. Use massed or as a facer plant. Plant Select 2000.					
PBP	#2	15.75		18.75	
	#5	24.50		28.50	
<i>Prunus besseyi</i>, Western Sand Cherry 5-6’					
Blue-green foliage. White flowers before leaves. Native shrub that tolerates dry conditions. Orange-red fall color. Use in shrub borders or massed.					
PBS	#2	14.50		17.50	
	#5	22.50		26.50	
<i>Prunus tenella</i>, Dwarf Russian Almond 2-5’					
Similar to <i>Prunus fruticosa</i> . Pink to red flowers. Hard, fuzzy almond-like fruit. Irregular suckering shrub.					
PTN	#1	SOLD OUT			
	#5	22.50		26.50	
<i>Prunus tomentosa</i>, Nanking Cherry 8-10’					
Fragrant white flowers. Bright red edible fruit almost 1/2” across. Yellow fall color. Provides wildlife habitat.					
PTM	#2	14.50		17.50	
	#5	SOLD OUT			
<i>Prunus x cistena</i>, Purpleleaf Sand Cherry 7-10’					
Outstanding deep maroon glossy foliage all season long makes this a widely used accent plant. Use in shrub borders and massed in large areas. Single-stem form in tree section.					
PC3	#2	SOLD OUT			
	#5	SOLD OUT			

	5 - 24	25 - 49	50+	1 - 4	
<i>Prunus virginiana</i>, Common Chokecherry - See Specimen and Container Trees, Page 29.					
<i>Prunus virginiana</i>, ‘Canada Red Chokecherry’ - See Specimen and Container Trees, Page 28.					
Blossom Blight is a common occurence on <i>Prunus</i> species in the spring. It is a fungus that begins at flowering and may continue into bud break. It can be controlled with fungicides at flowering and bud break.					
<i>Rhamnus frangula</i> ‘Ron Williams’, Fine Line® Buckthorn 4-6’					
Fine Line combines the narrow (fern) leafed selection with the columnar habit of Tallhedge.					
RFL	#2	20.00		23.00	
	#5	26.75		30.75	
<i>Rhododendron</i> ‘Lilac Lights’, Lilac Lights Azalea 3-4’					
An improved, more uniform selection of Orchid Lights Azalea with slightly smaller deep lilac flowers.					
RLI	#2	31.00		34.00	
<i>Rhododendron</i> ‘Mandarin Lights’, Mandarin Lights Azalea 4-5’					
Brilliant bright mandarin-orange flowers in early spring. Deciduous.					
RML	#2	31.00		34.00	
<i>Rhododendron</i> ‘Northern Hi-Lights’, Northern Hi-Lights Azalea 4-5’					
Cream colored flowers and burgundy fall color. Deciduous. Fragrant.					
RNH	#2	31.00		34.00	
<i>Rhododendron</i> ‘Rosy Lights’, Rosy Lights Azalea 4-5’					
Dark rosy-pink flowers late in May and early June. Deciduous.					
RRL	#2	31.00		34.00	
<i>Rhododendron</i> ‘P.J.M.’, P.J.M. Rhododendron 4-5’					
An extremely hardy Rhododendron. Masses of lavender flowers in spring. Needs moist, well drained, acidic soil. Evergreen.					
RPJ	#2	31.00		34.00	
	#5	51.00		55.00	
<i>Rhus aromatica</i> ‘Gro-low’, Gro-low Fragrant Sumac 2-3’					
Drought tolerant. Low growing, spreading Sumac (up to 6’ wide) with orange to red fall color. Great for slope stabilization. Use as a facer plant or massed.					
RGO	#2	17.75	16.75	20.75	
	#5	26.75	25.75	30.75	
<i>Rhus glabra</i>, Smooth Sumac 6-10’					
Drought tolerant Sumac with smooth glaucous stems and brilliant red fall color. A coarse grower. Best in shrub borders.					
RGA	#2	14.50		17.50	

54	Shrubs					
		5 - 24	25 - 49	50+	1 - 4	
<i>Rhus typhina</i> ‘Bailtigor’, First Editions® Tiger Eyes® Cutleaf Staghorn Sumac 6’ Zone 4						
Golden leafed form of Cutleaf Sumac that provides an interesting accent in the shrub border. A Bailey Nursery introduction.						
RTE	#2	17.75			20.75	
<i>Rhus trilobata</i>, Three Leafed Sumac 3-6’ Zone 4						
Native, drought tolerant, low growing shrub that forms a dense thicket.						
RTR	#1	9.50			11.50	
	#2	14.50			17.50	
	#5	22.50			26.50	
	#7	SOLD OUT				
<i>Rhus typhina</i>, Staghorn Sumac 10-15’ Zone 3						
Drought tolerant, hairy stem and brilliant red fall color. Best in shrub borders. Very coarse grower.						
RTY	#2	14.50			17.50	
	#5	SOLD OUT				
<i>Ribes alpinum</i>, Alpine Currant 3-5’ Zone 2						
Extremely hardy hedge plant. Glossy green foliage, adaptable to shade. Accepts shearing well and is easily shaped into formal hedges.						
RAL	#1	9.00			11.00	
	#2	14.50	13.50	13.00	17.50	
	#5	21.00	20.00	19.00	25.00	
<i>Ribes alpinum</i> ‘Green Mound’, Dwarf Alpine Currant 3-5’ Zone 3						
An excellent selection of Alpine Currant that grows wider than tall and is rounded in habit. Leafs out early, grows in sun or shade and is sterile. A nice hedge or facer plant.						
RGM	#2	20.00	19.00		23.00	
	#5	25.75	24.75		29.75	
<i>Ribes aureum</i>, Yellow Flowering Currant 6’ Zone 2						
Hardy native shrub with fragrant yellow flowers in spring and black berries in summer. Light green to pale yellow foliage.						
RAR	#1	9.50			11.50	
	#2	SOLD OUT				
	#5	25.75	24.75		29.75	
<i>Ribes cereum</i>, Wax Currant 2-4’ Zone 2						
Dense native rounded shrub with waxy gray-green leaves. Bright red marble sized fruit, in late summer.						
RCR	#1	11.00			13.00	
	#5	26.75			30.75	
Ribes (Gooseberry and Currant), Rubus (Raspberry), Vitis (Grape), Vaccinium (Blueberry), and all our small fruits are listed on Pages 111-113.						

	5 - 24	25 - 49	50+	1 - 4	55

<i>Sambucus canadensis ‘Adams’</i>, Adams Elder	8-10’					Zone 3
Large growing, green leafed Elder. White flowers in June/July and large blue-black fruit. Use in shrub border.						
SAD	#2	14.50			17.50	
<i>Sambucus nigra ‘Eva’</i>, Black Lace Elderberry	8-10’					Zone 4
Totally new selection of Elderberry. Soft pink fading to white flowers in May/June. Intense purple-black foliage is finely cut.						
SBL	#2	17.75			20.75	
<i>Sambucus racemosa ‘Sutherland Golden’</i>, Cutleaf Golden Elder	6-8’					Zone 4
Cutleaf and yellow foliage distinguish this Elder. Smaller size allows it to fit in the landscape as an accent plant.						
SRS	#1	11.00			13.00	
	#5	26.75			30.75	
<i>Shepherdia argentea</i>, Silver Buffaloberry	8-12’					Zone 2
Silvery pubescent foliage and stems with orange-red fruit. Dense impenetrable barrier when used in shrub border. Closely akin to <i>Elaeagnus</i> as it is extremely hardy, drought and salt tolerant. Use in naturalized situations.						
SAR	#2	14.50			17.50	
	#5	22.50			26.50	
	#7	~3’	41.00		46.00	
<i>Sorbaria sorbifolia</i>, Ural Falsespirea	6-8’					Zone 2
Very hardy, with leaves that resemble Mountain Ash. Large white flower heads on current season’s growth in July are very showy. Suckers profusely. Not for small areas. Use in shrub borders.						
SSR	#1	9.00			11.00	
	#2	14.50			17.50	
	#5	21.00			25.00	
	#15	~4’	80.00		86.00	

		5 - 24	25 - 49	50+	1 - 4	
<i>Sorbaria sorbifolia ‘Sem’</i>, Sem Ash Leaf Spirea	3-4’					Zone 3
Dwarf selection of species with attractive pinkish fern-like emerging foliage. Dense white flower that when dried provides fall and winter interest. Suckers profusely.						
SSA	#1	10.50			12.50	
	#2	17.75			20.75	
	#5	25.75			29.75	
<i>Spiraea betulifolia ‘Glow Girl’</i>, Glow Girl® Birchleaf Spirea	3-4’					Zone 3
Yellow leafed selection of Tor Spirea below. Lacks the attractive fall color of Tor.						
SGG	#2	19.75			22.75	
<i>Spiraea betulifolia ‘Tor’</i>, Tor Birchleaf Spirea	2-3’					Zone 3
Compact rounded habit of native species. White flowers, dark gray-green foliage that has attractive fall color of orange ranging to purple. This selection retains an irregular habit and thus serves as an excellent choice for use in the landscape, whether it be in the “cultivated” versus “native” border, or in academic terms the “interface”.						
STR	#1	9.50	9.00		11.50	
	#2	14.50	13.50	13.00	17.50	
	#5	22.50	21.50		26.50	
<i>Spiraea douglasii</i>, Pink Spirea	2-4’					Zone 3
Native, low growing decidous shrub with pink flowers that fade quickly in the summer. Irregular habit. Use massed in the landscape. A very adaptable native shrub.						
SDG	#1	9.50			11.50	
	#5	22.50			26.50	
<i>Spiraea fritschiana</i>, Fritschiana Spirea	2-3’					Zone 3
Unique large leafed Spirea with rounded habit. White flowers and yellow to orange fall color. Use massed. Retains an irregular habit and thus serves as an excellent choice for use in the landscape, whether it be in the “cultivated” versus “native” border, or in academic terms the “interface”. Fast to mature and stays at 3’ tall.						
SFR	#1	9.50			11.50	
	#2	14.50	13.50		17.50	
	#5	21.00	20.00		25.00	
<i>Spiraea ‘Goldmound’</i>, Goldmound Spirea	18-24”					Zone 4
Low growing, compact accent plant. Yellow foliage (best in full sun) and pink flowers in June/July. Use as facer plant or as a semi ground cover.						
SGM	#1	9.50			11.50	
	#2	14.50	13.50		17.50	
	#5	22.50	21.50		26.50	
<i>Spiraea japonica ‘Little Princess’</i>, Little Princess Spirea	24-30”					Zone 3
Low growing, compact shrub with light green foliage that is covered with pink flowers most of June/July. Flowers on new wood. Use as a facer plant, grouped, or even as a ground cover.						
SLP	#1	9.00	8.50		11.00	
	#2	14.50	13.50		17.50	
	#5	21.00	20.00		25.00	

		5 - 24	25 - 49	50+	1 - 4	
<i>Spiraea japonica ‘Magic Carpet’, Magic Carpet Spirea</i> 18”						Zone 4
Darker yellow foliage with red tips. The more compact habit and size distinguish this from Goldflame Spirea.						
SJC	#1	9.50	9.50		11.50	
	#2	14.50	13.50		17.50	
	#5	22.50	21.50		26.50	
<i>Spiraea japonica var. alpina, Daphne Spirea</i> 12-18”						Zone 4
Extremely compact, slow growing, pink flowering Spirea. Deep, dark green foliage. Use as a ground cover or in situations where space is limited.						
SJA	#2	14.50			17.50	
<i>Spiraea nipponica ‘Halward’s Silver’, Halward’s Silver Spirea</i> 2-3’						Zone 4
Hardier, denser, slower growing Spirea. Lighter green leaves and smaller size distinguish this from Snowmound Spirea.						
SHS	#2	14.50			17.50	
<i>Spiraea nipponica ‘Snowmound’, Snowmound Spirea</i> 3-5’						Zone 4
White flowers in May borne along stems that tend to arch. Dense and compact with blue-green foliage. Use as facer plants, massed, or as a hedge. Flowers on old wood.						
SSM	#2	14.50	13.50		17.50	
	#5	21.00			25.00	
<i>Spiraea thunbergii ‘Ogon’, Mellow Yellow Spirea</i> 3-5’						Zone 4
Among the first shrubs to flower. It is covered in white flowers in the spring with soft yellow leaves throughout the season. Some shade may prevent leaf scorching from intense summer sun.						
STO	#2	21.00			24.00	
<i>Spiraea x bumalda ‘Anthony Waterer’, Anthony Waterer Spirea</i> 3-4’						Zone 4
Flowers are deep pink to almost red, flowering during July/August. Fall leaf color almost maroon. Use as facer plant, massed or hedge. Not as hardy as <i>Spiraea x bumalda ‘Froebelii’</i> .						
SAW	#2	14.50	13.50		17.50	
	#5	22.50			26.50	
<i>Spiraea x bumalda ‘Froebelii’, Froebel Spirea</i> 3-4’						Zone 3
Pink flowering above the foliage during early summer on new wood. Clean summer foliage and deep maroon fall color create multi-season interest. Use as a facer plant or massed. Hardier than <i>Spiraea x bumalda ‘Anthony Waterer’</i> .						
SFB	#1	9.00			11.00	
	#2	14.50	13.50		17.50	
	#5	21.00	20.00		25.00	
<i>Spiraea x bumalda ‘Goldflame’, Goldflame Spirea</i> 2-3’						Zone 4
An attractive accent plant with golden-copper spring foliage. Pink flowering in summer. Fall color a rich copper-orange. A useful compact facer or accent plant. Foliage not as bright yellow as Goldmound Spirea.						
SGF	#1	9.00	8.50		11.00	
	#2	14.50	13.50	13.00	17.50	
	#5	22.50	21.50		26.50	

		5 - 24	25 - 49	50+	1 - 4	
<i>Spiraea x bumalda</i> ‘Gumball’, Gumball Spirea 2’						Zone 3
Light green foliage and a compact roundish form distinguish this from <i>Spiraea x bumalda</i> ‘Froebelii’. The Gumball doesn’t lay open the way Froebelii does, so it looks neater in the landscape throughout the year. Dense, low maintenance plant. Use in facer planting.						
SGB	#2		14.50		17.50	
	#5		21.00		25.00	
<i>Spiraea x cinerea</i> ‘Grefsheim’, Grefsheim Spirea 4-6’						Zone 4
Abundant white flowers borne in early spring on old wood make this an interesting addition to the landscape. Light gray-green foliage on cascading branches. Use in massing.						
SCG	#1		9.50		11.50	
	#2		14.50		17.50	
	#5		22.50		26.50	
<i>Spiraea x vanhouttei</i>, Bridalwreath Spirea 5-7’						Zone 3
Profusion of white flowers in spring borne along arching branches that almost touch the ground. Use in the shrub border or massed. Tough plant. Use in large areas.						
SVH	#2		14.50		17.50	
	#5		21.00		25.00	
The <i>Spriaea bumalda</i> and <i>Spriaea japonica</i> species are kept neat, compact, and tidy in the landscape by trimming hard, or all the way to the ground each spring. Most plants that flower on new wood perform well when trimmed similarly. Potentillas can be pruned hard while dormant, removing up to half the growth.						
<i>Symphoricarpos albus</i>, White Snowberry 4-6’						Zone 3
Native plant throughout North America with bluish-green foliage. Has large interesting white berries in fall. Good for soil retention on steep banks. Very durable plant. Will tolerate partial shade. Use in naturalized settings.						
SWS	#1		9.00	8.50	11.00	
	#2		14.50	13.50	17.50	
	#5		21.00	20.00	25.00	
<i>Symphoricarpos occidentalis</i>, Western Snowberry 2-4’						Zone 3
Similar to <i>Symphoricarpos albus</i> but smaller and slightly slower growing. A native to the West that will tolerate partial shade.						
SOC	#1		9.75		11.75	
	#5		SOLD OUT			
<i>Symphoricarpos x doorenbosii</i> ‘Kolmcan’, Candy Coralberry 2-3’						Zone 4
Abundant pink fruit and small size distinguish this Coralberry.						
SCC	#2		22.00		25.00	

		5 - 24	25 - 49	50+	1 - 4	
<i>Syringa</i> ‘Miss Canada’, Miss Canada Lilac 6-9’ <div>Zone 2</div> <div>Bright pink flowers mid-June. Large leaves with a more open habit than other late Lilacs. Use in large areas.</div>						
SMC	#2	16.75			19.75	
	#5	24.50			28.50	
<i>Syringa meyeri</i> ‘Palibin’, Dwarf Korean Lilac 3-4’ <div>Zone 4</div> <div>Fine dwarf Lilac that is very floriferous at an early age. Fragrant violet-purple flowers and small dark green foliage. Good for massing or facer. Not as vigorous or as hardy as <i>Syringa patula</i> ‘Miss Kim’ in Montana. Helpful hint: plant Miss Kim Lilac instead.</div>						
SMP	#2	24.00			27.00	
	#5	36.00			40.00	
<i>Syringa patula</i> ‘Miss Kim’, Miss Kim Lilac 4-6’ <div>Zone 3</div> <div>Perhaps the very best of the dwarf Lilacs and a good four season plant. Fragrant pale Lilac flowers in spring, dark glossy green summer foliage, burgundy fall color and an attractive winter habit. Hardy. Excellent for massing or hedging. More vigorous and adaptable in Montana than its close cousin <i>Syringa meyeri</i> ‘Palibin’, which has inferior cold and frost tolerance.</div>						
SMK	#1	10.50			12.50	
	#2	17.75	16.75		20.75

		5 - 24	25 - 49	50+	1 - 4	
<u>Syringa vulgaris</u>, Common Purple Lilac 12-15'						Zone 2
One of the toughest shrubs for Montana's climate, it has been used for decades in American landscapes. Purple flowers, large growing, suckers profusely. Use in shrub borders.						
SVU	#1	9.50	9.00		11.50	
	#2	16.75	15.75		19.75	
	#5	25.75	24.75		29.75	
	#7	~3'	44.00		49.00	
	#15	~4'	SOLD OUT			
<u>Syringa vulgaris</u> var. <u>alba</u>, Common White Lilac 12-15'						Zone 2
White flowered version of <i>Syringa vulgaris</i> .						
SVA	#2	16.75			19.75	
	#5	25.75			29.75	
<u>Syringa x hyacinthiflora</u> 'Pocahontas', Pocahontas Lilac 10-12'						Zone 2
A vigorous upright growing Lilac developed in Canada. Deep purple flowers in early June, before <i>Syringa vulgaris</i> selections. Use in shrub borders.						
SHP	#2	17.75			20.75	
	#5	26.75			30.75	
<u>Syringa x 'Penda'</u>, Bloomerang® Lilac 3-5'						Zone 3/4
Hybrid Lilac with recurrent single lavender flowers during the summer. If you have seen <i>Syringa meyeri</i> 'Palabin' occasionally flower in late summer then this is what you can expect from the Bloomerang in a hot, dry summer climate. Less hardy than the <i>Syringa meyeri</i> 'Palibin' which is less hardy than Miss Kim Lilac!						
SBA	#2	27.50			30.50	
<u>Syringa x prestoniae</u> 'Donald Wyman', Donald Wyman Lilac 8-10'						Zone 2
Coarse, upright growing late Lilac. Purplish-lavender flowers appear later than with the <i>Syringa vulgaris</i> . The Preston Lilacs are later flowering than the French hybrid types, but are more adaptable and quicker to establish than all other types of Lilacs. Highly recommended for Montana. Use in shrub borders.						
SDW	#2	16.75			19.75	
	#5	24.50			28.50	
	#7	~3'	44.00	42.00	49.00	
	#15	~4'	80.00		86.00	
<u>Syringa x prestoniae</u> 'James Macfarlane', James Macfarlane Lilac 8-10'						Zone 2
One of the Preston Lilacs resulting from crosses of <i>Syringa reflexa</i> and <i>Syringa villosa</i> . Extremely hardy. Single pink fragrant flowers make this a useful addition to the Lilacs suited for Montana. Upright growing.						
SJM	#2	16.75			19.75	
	#5	24.50			28.50	
	#7	~3'	44.00		49.00	
	#15	~4'	80.00		86.00	

To provide a quality and properly established plant for customers, container Lilacs and specific Viburnums are grown for a second spring. These species are immature with only one year of growth in a container and a second year makes for a more robust plant.

5 - 24	25 - 49	50+	1 - 4
--------	---------	-----	-------

Lilac Flower and Season				
Variety	Color	Type	Season	Height
Bloomerang	Lavender	Single	Mid Spring	3-5'
Charles Joly	Magenta	Double	Mid Spring	6-12'
Common Purple (vulgaris)	Purple	Single	Mid Spring	12-15'
Common White (vul. alba)	White	Single	Mid Spring	12-15'
Donald Wyman	Purple-Lavender	Single	Late Spring	8-10'
Dwarf Korean	Violet-Purple	Single	Mid Spring	3-4'
James Macfarlane	Pink	Single	Late Spring	8-10'
Ludwig Spaeth	Red-Purple	Single	Mid spring	6-12'
Miss Canada	Bright Pink	Single	Late Spring	6-9'
Miss Kim	Purple	Single	Mid Spring	4-6'
Mme. Lemoine	White	Double	Mid Spring	6-12'
Pocahontas	Deep Purple	Single	Early Spring	10-12'
President Grevy	Blue	Double	Mid Spring	6-12'
Sensation	Purple	Single	Mid Spring	8-10'

Viburnum dentatum ‘Christom’, Blue Muffin Arrowwood Viburnum 6-8’ Zone 3
Shorter growing than species and more floriferous and fruitful. Somewhat glossy foliage and very uniform habit make this superior to the species. Use in shrub border.

VBM	#2	17.75	20.75
	#5	24.50	28.50

Viburnum lantana ‘Mohican’, Mohican Wayfaring Tree 6-8’ Zone 3
Thick dark green leaves and a dense rounded compact habit make this a unique plant for the landscape. Creamy white flowers in May and orange-red fruit that later turns black. Use massed or as a screen. Improvement over species due to resistance to bacterial leaf spot.

VLM	#2	20.00	23.00
	#5	24.50	28.50
	#7	SOLD OUT	

Viburnum lentago, Nannyberry Viburnum 12-15’ Zone 2
Shade tolerant. Stiffly upright grower in youth. White flowers borne on ends of branches in spring, superb clean glossy green foliage and purple-red fall color make this a multi-season plant. Use in shrub border and specimen plantings. Single-stem form in tree section.

VL3	#5	22.50	26.50
-----	----	-------	-------

Viburnum opulus ‘Compactum’, Compact European Cranberrybush 5-6’ Zone 3
A compact and rounded form of species. White flowers and red fruit. Use massed in the landscape.

VOC	#2	SOLD OUT
	#5	SOLD OUT

5 - 24	25 - 49	50+	1 - 4
--------	---------	-----	-------

Viburnum opulus ‘Nanum’, Dwarf European Cranberrybush 2-3’ Zone 4
Very dense rounded form. Good for foundation planting or small hedge. Very little trimming required.

VON	#2	20.00	23.00
	#5	26.75	30.75

Viburnum opulus ‘Roseum’, Common Snowball Viburnum 10-12’ Zone 3
Well known for its impressive white flowers 2½-3” in diameter in May. Somewhat coarse in the landscape but noteworthy when used in the shrub border or when massed. Susceptible to aphid infestations.

VOR	#2	17.75	20.75
	#5	24.50	28.50

Viburnum trilobum ‘Bailey Compact’, Bailey Compact American Cranberrybush 5-6’ Zone 3
Very slow growing, stiffly upright and compact shrub. Another good four season plant. Some flowers, good clean foliage, fantastic reddish fall color and neat winter habit. Suitable in the shrub border, massed, hedged and in youth a good facer plant because it is so slow growing. New growth emerges with reddish tint.

VBC	#1	11.00	13.00
	#2	17.75	16.75
	#5	26.75	25.75
			30.75

Viburnum trilobum ‘Wentworth’, Wentworth American Cranberrybush 10-12’ Zone 2
Faster growing and has larger fruit than species. Large white flower heads and red fruit. Use in shrub border.

VTW	#2	17.75	20.75
	#5	25.75	29.75

Weigela florida ‘Red Prince’, Red Prince Weigela 5-6’ Zone 4
Excellent red flower midsummer. Use in shrub border or grouped in masses. Frequently suffers tip dieback after severe winters.

WRP	#2	15.75	18.75
	#5	24.50	28.50

Berberis thun. ‘Golden Nugget’ 12”	Potentilla ‘Mango Tango’ 2’	Spiraea ‘Goldmound’ 18-24”
Berberis thun. ‘Rose Glow’ 3’	Potentilla ‘Pink Beauty’ 2-3’	Spiraea j. alpina 12-18”
Buxus micro. ‘Wintergreen’ 2-3’	Potentilla ‘Tangerine’ 2-3’	Spiraea j. ‘Little Princess’ 24-30”
Buxus x ‘Green Velvet’ 2-3’	Potentilla ‘Yellow Gem’ 1-2’	Spiraea j. ‘Magic Carpet’ 18”
Caragana frutex ‘Globosa’ 2-3’	Prunus besseyi ‘Pawnee Buttes’ 1-2’	Spiraea nipp. ‘Halward’s Silver’ 2-3’
Cotoneaster apiculatus 2-3’	Rhus aromatica ‘Gro Low’ 2-3’	Spiraea x bum. ‘Goldflame’ 2-3’
Daphne x b. ‘Carol Mackie’ 2-3’	Rosa ‘Bill Reid’ 2-3’	Spiraea x bum. ‘Gumball’ 2’
Hydrangea p. ‘Bobo’ 3’	Rosa ‘Champlain’ 3’	Viburnum op. ‘Nanum’ 2-3’
Potentilla fruticosa 2-3’	Rosa ‘Morden Blush’ 2-3’	
Potentilla ‘Abbotswood’ 2-3’	Rosa ‘Morden Fireglow’ 18-36”	

Adapted Shrubs List

Selections of the native species or similar species (from other continents climatologically similar to North America) with many of the same attributes as the native selections, but with improvements such as uniformity, habit, fall color, flower, etc.

Amelanchier alnifolia selections	Prunus virginiana ‘Canada Red’
Arctostaphylos uva-ursi ‘Massachusetts’	Rhus aromatica ‘Gro-low’
Aronia selections	Rosa ‘Nearly Wild’
Cornus baileyi	Rosa rugosa
Cornus sericea selections	Salix alba ‘Vitellina’
Philadelphus lewisii ‘Cheyenne’	Salix ‘Flame’
Physocarpus opulifolius var. nanus	Sambucus canadensis selections
Potentilla fruiticosa ‘Katherine Dykes’	Sorbaria sorbifolia
Prunus besseyi ‘Pawnee Buttes’	Spiraea betulifolia ‘Tor’
Prunus tomentosa	Viburnum trilobum ‘Wentworth’

The #15 shrubs provide an excellent substitute and great value when used as a replacement for B&B shrubs. Glacier Nursery, LLC offers #15 shrubs selections in the following species: Acer, Amelanchier, Cornus, Physocarpus, Prunus, Salix, Sorbaria, Syringa and Viburnums. We have added #25 container Acer ginnala, Amelanchier x. ‘Autumn Brillance’, Prunus virginiana, and Prunus virginiana ‘Canada Red’.

EVERGREENS

Container evergreens are available throughout the season. The Evergreens are purchased from nurseries in the Northwest region. Most of April and May shipped evergreens are overwintered at Glacier Nursery, LLC. If you have any questions regarding the source of plants purchased from Glacier Nursery, LLC, feel free to ask, as we are more than willing to share that information with you.

The invoiced price per plant depends upon the number of plants delivered of a species and size on an **individual** order and delivered in **one shipment** to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing. **Container size is trade designation only.**

Please refer to Page 81 for recommendation on planting balled and burlap Evergreens.

		5 - 24	25 - 49	50+	1 - 4
<u>Abies balsamea ‘Nana’, Dwarf Balsam Fir</u> 2’h, 2-3’ spread Zone 3					
A dense, globe shaped fir with green needles. Needles are short, soft and flat. Prefers to be out of the hot sun and requires atmospheric moisture. Interesting small conifer for a partial shade location.					
ABN	#2	46.00			49.00
<u>Abies concolor, Concolor Fir</u> 25-40’h, 20-25’ spread Zone 4					
Soft bluish needles and pyramidal habit make this a standout in the landscape. Plant in a protected environment.					
ACC	B&B 4’	145.00			152.00
	B&B 6’	245.00			252.00
<u>Abies lasiocarpa, Alpine Fir</u> 30-50’h, 15-20’ spread Zone 4					
Soft green needles and upright habit make this an attractive conifer useful for naturalizing in a native landscape. Plant in a protected environment as like other Abies because it is accustomed to a high humidity environment.					
ALS	B&B 4’	215.00			222.00
	B&B 5’	255.00			262.00
	B&B 6’	315.00			322.00
	B&B 7’	415.00			422.00
	B&B 8’	515.00			522.00
<u>Juniperus chinensis ‘Monlep’, Mint Julep® Juniper</u> 4-6’h, 6-8’ spread Zone 3					
Mint-green foliage on fountain-like arching branches. A compact Pfitzer type Juniper. Use as a low shrub.					
JSG	#2	26.00			29.00
	#5	35.00			39.00
<u>NEW! Juniperus chinensis ‘Monlep’, Pompon Mint Julep Juniper</u> Zone 4					
Pompon selection is pruned to have 3-5 pom-pom shaped balls of foliage.					
JMP	#5	135.00			139.00

		5 - 24	25 - 49	50+	1 - 4
<u>Juniperus chinensis ‘Spartan’, Spartan Juniper</u> 12-15’h, 4-6’ spread Zone 4					
Narrow, dark green upright Juniper. We offer this selection this year as an upright green foliage Juniper which are in very short supply.					
JCS	#5	60.00			64.00
	#7	129.00			134.00
<u>Juniperus communis ‘Mondap’, Alpine Carpet® Juniper</u> 8”h, 3-4’ spread Zone 3					
Dark green foliage. Improved low growing version of native species. Useful for a ground hugging native look.					
JCA	#2	26.00			26.00
	#5	36.00	35.00		40.00
<u>Juniperus communis var. montana, Montana Common Juniper</u> 3-6”h, 3-6’ spread Zone 3					
Deeper green color than native species and Alpine Carpet. Very low growing.					
JCM	#2	26.00			29.00
	#5	35.00			39.00
<u>Juniperus horizontalis ‘Blue Chip’, Blue Chip Juniper</u> 6-12”h, 6-8’ spread Zone 3					
Low growing, wide spreading ground cover type of Juniper. Makes an attractive blue uniform ground cover. Remains dense in the center.					
JBC	#1	13.00			15.00
	#2	26.00	25.00		29.00
	#5	35.00	34.00		39.00
<u>Juniperus horizontalis ‘Hughes’, Hughes Juniper</u> 1-2’h, 6-8’ spread Zone 3					
Silver-blue summer foliage and blue-green in winter. Uniform and low growing. Use as a ground cover or for facer planting.					
JHH	#2	26.00			29.00
	#5	35.00			39.00
<u>Juniperus horizontalis ‘Monber’, Icee Blue® Juniper</u> 8”h, 6-8’ spread Zone 3					
Low spreading Juniper that has brilliant silver-blue foliage. An improved Wilton Blue Rug Juniper selection.					
JHM	#2	26.00	25.00		29.00
	#5	35.00			39.00
<u>Juniperus horizontalis ‘Prince of Wales’, Prince of Wales Juniper</u> 8”h, 6-10’ spread Zone 3					
Very low growing. Bright green summer foliage with bluish tinge and purplish-brown in winter. Very hardy. From Morden Experiment Station in Canada. Use as a ground cover. Maintains good density in center of plant.					
JPW	#2	28.00			31.00
	#5	38.00	37.00		42.00
Most Junipers and Arborvitae for April shipments are overwintered in unheated hoop houses covered with white plastic. Containerized Spruce and Pine are overwintered beneath plastic like our deciduous shrubbery. This allows customers to plant acclimated (dormant) container Junipers, Spruce, Pine, and Arborvitae.					

72	Evergreens				
		5 - 24	25 - 49	50+	1 - 4
<i>Juniperus horizontalis</i> ‘Youngstown’, Youngstown Andorra Juniper 12”-18”h, 6-8’ spread Zone 4					
Green foliage in summer, bronze-purple in winter. Compact, dense, low spreading Juniper. Use as a ground cover or facer plant.					
JHY	#5	35.00	34.00		39.00
<i>Juniperus sabina</i>, Savin Juniper 4-6’h, 5-10’ spread Zone 3					
Blue-green foliage. Upright, somewhat vase-shaped habit. Really takes up space in the landscape.					
JSV	#2	26.00			29.00
	#5	33.00			39.00
<i>Juniperus sabina</i> ‘Broadmoor’, Broadmoor Juniper 2-3’h, 4-6’ spread Zone 4					
Mounded center, rich green color, and a very prostrate grower. Use as a ground cover. Hardy. Use in full sun with good drainage.					
JBM	#5	35.00			39.00
<i>Juniperus sabina</i> ‘Buffalo’, Buffalo Juniper 12”h, 6-8’ spread Zone 3					
Bright green foliage. Prostrate grower. Feathery appearance. Use as a ground cover. Widely used Juniper suitable throughout Montana.					
JSB	#1	13.00			15.00
	#2	26.00	25.00		29.00
	#5	35.00	34.00		39.00
<i>Juniperus sabina</i> ‘Monard’, Moor-Dense Juniper 8-12”h, 4-6’ spread Zone 4					
A denser form of Broadmoor Juniper with bright green foliage and less pronounced mounding in the center of the plant than the afore mentioned.					
JMD	#5	35.00			39.00
<i>Juniperus sabina</i> ‘Monna’, Calgary Carpet Juniper 6-12”h, 6-8’ spread Zone 4					
Selection of Arcadia Juniper with lower spreading habit and soft green foliage.					
JCC	#2	26.00			29.00
	#5	35.00			39.00
<i>Juniperus sabina</i> ‘Scandia’, Scandia Juniper 12-18”h, 6-10’ spread Zone 3					
Low growing. Spreading. Compact. Bright green foliage.					
JSS	#2	26.00			29.00
	#5	35.00			39.00
<i>Juniperus scopulorum</i> ‘Cologreen’, Cologreen Juniper 15-20’h, 5-7’ spread Zone 3					
Upright juniper used for screening. Green foliage.					
JSC	#5	59.00			63.00
	#7	129.00			134.00

Most Junipers and Arborvitae for April shipments are overwintered in unheated hoop houses covered with white plastic. Containerized Spruce and Pine are overwintered beneath plastic like our deciduous shrubbery. This allows customers to plant acclimated (dormant) container Junipers, Spruce, Pine, and Arborvitae.

		5 - 24	25 - 49	50+	1 - 4
<i>Juniperus scopulorum</i> ‘Medora’, Medora Juniper 10-12’h, 2-4’ spread Zone 3					
Hardy, narrow form of upright Juniper. Blue-green foliage and slow growing. Needs very little trimming.					
JSM	#5	59.00			63.00
	#7	129.00			134.00
	#15	195.00			201.00
<i>Juniperus scopulorum</i> ‘Moonglow’, Moonglow Juniper 15-18’h, 6-8’ spread Zone 3					
Silver-blue foliage on this large growing upright Juniper that is used in the landscape as a screen.					
JMG	#5	60.00			64.00
	#7	129.00			134.00
<i>Juniperus scopulorum</i>, Rocky Mountain Juniper 30-40’h, 4-6’ spread Zone 3					
Native Juniper, long lived, hardy. Suitable for dry locations.					
JSO	#1	13.00			15.00
<i>Juniperus scopulorum</i> ‘Wichita Blue’, Wichita Blue Juniper 10-15’h, 4-6’ spread Zone 3					
Durable upright Juniper with silver-blue foliage. A very reliable performer in Montana.					
JWB	#5	59.00	58.00		63.00
	#10	145.00	142.00		150.00
	#15	195.00			201.00
<i>Juniperus squamata</i> ‘Blue Star’, Blue Star Juniper 2-3’h, 3-4’ spread Zone 4					
Unique looking, slow growing, dense rounded plant with rich blue foliage.					
JBS	#2	26.00			29.00
	#5	35.00			39.00
<i>Juniperus virginiana</i> ‘Blue Arrow’, Blue Arrow Juniper 12-15’h, 2’ spread Zone 4					
Bluer and tighter than Skyrocket Juniper.					
JBA	#5	59.00			63.00
	#10	155.00			160.00
	#15	195.00			201.00
<i>Juniperus virginiana</i> ‘Skyrocket’, Skyrocket Juniper 15-20’h, 3’ spread Zone 4					
Narrow, upright Juniper with silver-blue foliage.					
JVS	#5	59.00			63.00
	#7	129.00			134.00
	#15	195.00			201.00
<i>Juniperus virginiana</i> ‘Taylor’, Taylor Eastern Redcedar 20-25'h, 3’ spread Zone 3/4					
More upright and narrow compared to the species. Foliage is green-gray and will tolerate dry and alkaline sites.					
JVT	#5	59.00			63.00
	#10	155.00			160.00

				5 - 24	25 - 49	50+	1 - 4	
<i>Juniperus x pfitzeriana ‘Monsan’, Sea Of Gold® Juniper</i>				3-4’h, 4’ spread				Zone 3
Selection of Gold Coast Juniper noted for improved “eye popping” golden foliage color throughout the year.								
Use as an accent plant that draws (blinds) your eyes wherever used in the landscape.								
JOG	#2			26.00			29.00	
	#5			35.00			39.00	
<i>Larix occidentalis, Western Larch</i>				100-150’h, 25-40’ spread				Zone 3
A large deciduous conifer that grows extremely straight. Leaves are light green, turning yellow in the fall before dropping for winter. Native throughout the Northern Rocky Mountains.								
LOD	#1			<i>SOLD OUT</i>				
	#5			55.00			59.00	
<i>Microbiota decussata, Russian Arborvitae</i>				12-18”h, 4-6’ spread				Zone 2
Shade tolerant, densely branched dwarf evergreen with foliage that resembles Arborvitae. Winter color is bronze and is slow to green up in the spring.								
MRC	#2			35.00			38.00	
<i>Picea abies, Norway Spruce</i>				60-80’, 25-30’ spread				Zone 3
Tough and adaptable with green needles and a fast rate of growth.								
PAS	B&B	6’		240.00			247.00	
	B&B	8’		360.00			367.00	
<i>Picea abies ‘Little Gem’, Little Gem Norway Spruce</i>				18”h, 18” spread				Zone 3
Flat topped globe shape of dense branches. Minimal maintenance required, as it stays small and tight.								
PLG	#2			37.00			40.00	
<i>Picea abies ‘Nidiformis’, Bird’s Nest Spruce</i>				3-5’h, 4-6’ spread				Zone 3
Distinctive, slow growing dwarf plant. Use in rock garden settings or specimen use.								
PAN	#2			28.00			31.00	
	#5			39.00			43.00	
<i>Picea abies ‘Pendula’, Weeping Norway Spruce</i>				6-10’h, 5-10’ spread				Zone 2
Unique specimen having a weeping habit. Excellent accent plant. Deep dark green foliage.								
PAP	#5			100.00			104.00	
	#10	~ 5’		200.00			205.00	
<i>Picea engelmannii, Engelmann Spruce</i>				60-100’h, 20-25’ spread				Zone 3
Native, narrow, densely pyramidal tree. Use these instead of Colorado Blue Spruce where a more native look is desired.								
PEG	#1			10.50			12.50	
	B&B	5’		190.00			197.00	
	B&B	6’		240.00			247.00

	B&B	8’		360.00			367.00	

				5 - 24	25 - 49	50+	1 - 4	
<i>Picea glauca ‘Conica’, Dwarf Alberta Spruce</i>				4-6’h, 3-4’ spread				Zone 3
Slow growing, compact miniature Spruce. Bright green foliage. Use as an accent plant.								
PGC	#5			52.00			56.00	
	#7			145.00			149.00	
	#10			<i>SOLD OUT</i>				
<i>Picea glauca densata, Black Hills Spruce</i>				35-45’h, 15-20’ spread				Zone 3
Slow growing with a dense habit. Short, gray-green needles. Can be sheared.								
PBH	#5			52.00			56.00	
	#10			<i>SOLD OUT</i>				
	B&B	5’		140.00			197.00	
	B&B	6’		240.00			247.00	
	B&B	7’		290.00			297.00	
	B&B	8’		360.00			367.00	
<i>Picea glauca ‘Pendula’, Weeping White Spruce</i>				15-30’h, 5-10’ spread				Zone 3
A very formal, narrow conical shape. Unlike other weeping selections it has an upright leader, weeping branches and light gray-green needles. Use as an interesting gray-green pillar in the landscape. Plant Select 2012.								
PWS	#5			125.00			129.00	
	#10			265.00			270.00	
<i>Picea pungens glauca, Colorado Blue Spruce</i>				50-70’h, 20-30’ spread				Zone 3
Hardy, large growing Spruce. Blue-green in color, native and adaptable. Most tolerant conifer we offer for harsh climates, poor soils and moist soils. Won’t tolerate wet soils. Spruce Bud Worm susceptible.								
PPG	#1			15.00			17.00	
	#2			35.00			38.00	
	#5			49.00			53.00

	#25	295.00			302.00	
	B&B 5'	SOLD OUT				
	B&B 6'	SOLD OUT				
<i>Picea pungens ‘Globosa’, Dwarf Globe Blue Spruce</i> 6-10'h, 6-10' spread with apical & 10-12' w/o Zone 3						
Globe shaped dwarf evergreen with a flat top, dense branching and blue foliage color. Great small accent plant.						
PGB	#2	55.00			58.00	
	#5	85.00			89.00	
	#10	160.00			165.00	
<i>Picea pungens ‘Iseli Fastigiata’, Iseli Fastigiata Blue Spruce</i> 15-25'h, 4-10' spread Zone 3						
Dense, narrow, stiffly upright Colorado Blue Spruce. Useful for use as a screen, where space is limited.						
PPI	#5	85.00			89.00	
	#20	4'	245.00		252.00	
	B&B 5'	SOLD OUT				
	B&B 6'	SOLD OUT				
<i>Picea pungens ‘Lundeby’s Dwarf’, Lundeby’s Dwarf Blue Spruce</i> 2-3'h, 3-4' spread Zone 4						
Less than half the size of <i>P. pungens ‘Globosa’</i> which is popular as a small accent landscape plant.						
PLD	#2	SOLD OUT				
	#5	130.00			134.00	
<i>Picea pungens ‘Montgomery’, Montgomery Spruce</i> 6-8'h, 6' spread Zone 3						
A dwarf Spruce with silver-blue needles grafted on 30" standard. Single-stem, looks like a lollipop.						
PMD	#5	150.00			154.00	

Most Junipers and Arborvitae for April shipments are overwintered in unheated hoop houses covered with white plastic. Containerized Spruce and Pine are overwintered beneath plastic like our deciduous shrubbery. This allows customers to plant acclimated (dormant) container Junipers, Spruce, Pine, and Arborvitae.

	Evergreens				77
		5 - 24	25 - 49	50+	1 - 4
<i>Picea pungens ‘Pendula’, Weeping Colorado Blue Spruce</i> 4-20'h, 5-15' spread Zone 3					
Blue needles and weeping contorted habit distinguish this selection from <i>Picea abies ‘Pendula’</i> . More of an accent plant than Weeping Norway or White Spruce because of its blue color.					
PPP	#5	SOLD OUT			
	#10	160.00			165.00
<i>Picea pungens ‘Procumbens’, Procumbens Spreading Spruce</i> 1-2'h, 8-12' spread Zone 3					
A low growing, spreading Spruce that creeps and crawls through the landscape. Interesting blue creeping accent plant.					
PPC	#5	130.00			134.00
<i>Picea pungens ‘Sester Dwarf’, Sester Dwarf Spruce</i> 6-12'h, 4-6' spread Zone 3					
A dwarf blue needled Spruce with a very dense conical form, makes this a perfect specimen for a small landscape.					
PPS	#5	120.00			124.00
	#10	185.00			190.00
<i>Picea pungens ‘St. Mary’s Broom’, St. Mary’s Broom Blue Spruce</i> 1-3'h, 2-4' spread Zone 3					
Slow growing dwarf blue Spruce. Spreading mound or globosa habit that does not form a central leader of any sort (Iseli Nursery #3 sold as a #2).					
PBR	#2	63.00			66.00
<i>Pinus aristata, Bristlecone Pine</i> 10-20'h, 10-20' spread Zone 4					
Very slow growing, irregular habit, making it an attractive addition to a rock garden or when used as an accent plant. Dark green foliage with resin spots. Native to Southern Rockies at elevation.					
PAT	B&B 4'	195.00			202.00
	B&B 5'	275.00			282.00
	B&B 6'	345.00			352.00
	B&B 7'	425.00			432.00
<i>Pinus contorta var. latifolia, Lodgepole Pine</i> 60-80'h, 15-20' spread Zone 4					
Native Pine growing tall and narrow.					
PCL	B&B 6'	275.00			282.00
<i>Pinus flexilis ‘Vanderwolf’s Pyramid’, Vanderwolf Pine</i> 20-30'h, 10-12' spread Zone 3					
Narrow habit (10' wide) at maturity and smaller height make this a good choice for a screen where space is limited.					
PFV	B&B 5'	245.00			252.00
	B&B 6'	295.00			302.00
<i>Pinus mugo ‘Big Tuna’, Big Tuna Mugo Pine</i> 8-12'h, 5-8' spread Zone 3					
A slow growing, upright broad species that will be taller than wide. The large size and dense habit creates a focal interest in the garden. A grafted selection with predictable size.					
PBT	#5	115.00			119.00
	#10	215.00			220.00

		5 - 24	25 - 49	50+	1 - 4	
<i>Pinus mugo</i> ‘Jakobsen’, Jakobsen Mugo Pine 3-5'h, 3-5' spread Zone 3						
Globe shaped Pine that naturally has the look of a manicured bonsai.						
PMJ	#5	130.00			134.00	
	#10	250.00			255.00	
<i>Pinus mugo</i> ‘La Cabana’, La Cabana Mugo Pine 12-15'h, 10-12' spread Zone 3						
Similar in size, habit and hardiness to Tannenbaum Mugo Pine.						
PML	B&B 4'	150.00			157.00	
<i>Pinus mugo</i> ‘Mops’, Mops Mugo Pine 3-5'h, 3-5' spread Zone 3						
To eliminate the variability of seedling grown Mugo Pines, a grafted selection is grown to achieve predictable size and habit.						
PMS	#2	35.00	34.00		38.00	
	#5	68.00	67.00		72.00	
	#10	175.00			180.00	
<i>Pinus mugo pumilio</i>, Shrubby Swiss Mountain Pine 3-6'h, but as large as 8-10'h Zone 3						
Wide spreading and variable in height, usually 3' to 6', but could get as tall as 8' to 10'. Sheared plants are pruned to make them dense and full in appearance. Unsheared are grown more natural and will not be as dense as the sheared plants.						
PMP	#1	11.50			13.50	
	#2	30.00	29.00		33.00	
	#5	46.00			50.00	
PMM	unsheared #5	46.00			50.00	
	unsheared #10	95.00			100.00	
	unsheared #15	165.00			171.00	
<i>Pinus mugo rostrata</i>, Mugo Pine Rostrata 10-25'h, 5-20' spread Zone 3						
Similar to <i>Pinus mugo mughus</i> except it has a more upright, tree-like shape.						
PRO	B&B 6'	295.00			302.00	
<i>Pinus mugo</i> ‘Slowmound’, Slowmound Mugo Pine 3-4'h, 4-6' spread Zone 2						
Dense, dark green mound shape with reliable color and growth rate. Works well in confined areas.						
PSL	#2	35.00			38.00	
	#5	68.00			72.00	
<i>Pinus mugo</i> ‘Tannenbaum’, Tannenbaum Pine 12-15'h, 8-12' spread Zone 3						
Pine that is known for its winter hardiness and color. Useful in the landscape because of compact, upright and pyramidal form. A nice backdrop that stays smaller than Austrian Pine. A grafted selection with predictable size. May have branches weighted down by heavy snow.						
PTB	#20	235.00			242.00	
	B&B 3'	130.00			137.00	

		5 - 24	25 - 49	50+	1 - 4	
<i>Pinus mugo</i> ‘Valley Cushion’, Valley Cushion Mugo Pine 1-2'h, 3-4' spread Zone 3						
Very compact, low growing, wider than tall, which requires no pruning as it is extremely slow growing. Smallest of the Mugo Pine we offer (Iseli Nursery #3 sold as a #2, #6 sold as a #5).						
PVC	#2	35.00			38.00	
	#5	68.00			72.00	
<i>Pinus mugo</i> ‘White Bud’, White Bud Pine 3-5'h, 3-5' spread Zone 3						
A dwarf globe shaped selection of the species known for its resinous coating to each terminal bud, resulting in a “white bud” appearance in the winter. A grafted selection with a predictable size (Iseli Nursery #6 sold as a #5).						
PMW	#2	35.00			38.00	
	#5	68.00			72.00	
<i>Pinus nigra</i>, Austrian Pine 40-50'h, 20-30' spread Zone 4						
Long needled Pine with dark green color. Dense habit. Tolerant of adverse conditions.						
PNG	#5	50.00			54.00	
	#20	190.00			197.00

	B&B	9'			645.00
<u>Taxus x media</u> 'Densiformis', Dense Spreading Yew		4-6'h, 4-6' spread			Zone 4
Dense with dark green foliage and generally retains full color overwinter. Shade tolerant.					
TMD	#2		45.00		49.00
<u>Taxus cuspidata</u> 'Morden', Morden Upright Yew		3-4'h, 4-6' spread			Zone 3
Hardy, smaller growing Yew that does not retain a green color in the winter. Tolerates shade.					
TCM	#2		26.00		29.00
<u>Taxus x media</u> 'Tauntoni', Taunton Spreading Yew		3-4'h, 4-6' spread			Zone 3
Dense spreading Yew that does not yellow as much in winter as other varieties of Yew. Shade tolerant.					
TMT	#2		32.00		35.00
Yew is highly toxic to all animals, though some are less susceptible to the poison such as certain seed eating birds and white-tail deer. While Yew is toxic all year, it is most toxic later in the season because of toxin build up.					
<u>Thuja occidentalis</u> 'Emerald', Emerald Arborvitae		10-15'h, 3-5' spread			Zone 4
Compact, dense, pyramidal habit. Holds color throughout the winter. Very susceptible to deer browse.					
TOE	#5		45.00		49.00
	#10		110.00		115.00
<u>Thuja occidentalis</u> 'Hetz Midget', Hetz Midget Arborvitae		2'h, 2-3' spread			Zone 3
Very slow growing, dense, globe shaped form requiring no shearing.					
THM	#5		46.00		49.00
<u>Thuja occidentalis</u> 'Holmstrup', Holmstrup Arborvitae		4-5'h, 18-24" spread			Zone 3
Compact grower with bright green foliage and shorter stature than other upright Arborvitae. Susceptible to deer browse.					
THO	#5		46.00		49.00
<u>Thuja occidentalis</u> 'Little Giant', Little Giant Arborvitae		4-6'h, 4-6' spread			Zone 3
Dwarf and globe shaped Arborvitae with deep green foliage.					
TLG	#5		45.00		49.00
Most Junipers and Arborvitae for April shipments are overwintered in unheated hoop houses covered with white plastic. Containerized Spruce and Pine are overwintered beneath plastic like our deciduous shrubbery. This allows customers to plant acclimated (dormant) container Junipers, Spruce, Pine, and Arborvitae.					

<u>B&B BALL SPECIFICATIONS</u>		
<u>Height</u>	<u>Ball Diameter</u>	<u>Approximate Wt. - Lbs</u>
4'	24"	250
5'	28"	425
6'	28"	475
7'	28"	550
8'	32"	550
9'	32-36"	680
10'	32-36"	680
12'	36-44"	950

The above is only a **guide**. Plant species, root mass, soil type, and especially soil moisture are contributing factors to ball size and weight in addition to tree caliper. Height of evergreen trees is determined from the ball up to one half the length of the terminal growth, or pulling up the first full whorl beneath the leader and measuring to that height. Ball depth is approximately 70 percent of the diameter.

There are many different guidelines for planting balled and burlap trees and what follows is a procedure which accommodates those requirements: Handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Dig the hole twice as wide as the root ball **but** only as deep as the root ball. Preferably hand dig the last 3-6" so the root ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom of the ball to the point where the burlap begins angling or flaring away from the tree trunk. Verify the top of the root ball (as measured above) will be level, or slightly higher (3") than the existing grade once placed in the hole. Trees are often killed or have reduced vigor when planted too deep.

Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment, this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters. Backfill with the native soil or a mix of one quarter to one half soil amendments and native soil. Settle the soil with abundant water, mulch if desired, and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

EVERGREEN PLANTING INSTRUCTIONS

Disturbing the container root plug at planting will improve the vigor and longevity of the plant in the landscape. This can be accomplished by using a reciprocating saw with a wood pruning blade as we have described with tree planting. Alternative methods may include slicing the container plug across the plug and butterflying, opening the plant plug in the hole. Another method if the roots of the plug are not tightly circling is to shave down the sides of the plant plug loosening the soil and roots from the plug. These methods assist the plant in establishing into the native soil as well as avoiding circling roots that might constrict plant growth and cause a plant to fall over. Further tips for planting are covered on our website, within the Resources Tab.

PERENNIALS

Glacier Nursery, LLC offers a wide variety of perennials and ground covers that are suited to the Northern climate. All plants are fully established and rooted into the media, with roots to the edge of the plastic container. Potting media contains compost that retains moisture and nutrients that produce a plant ready for immediate resale or planting into the landscape. The majority of varieties come standard in #1 containers, but some ground covers are also available in 3½” cells (18 per tray), #2, or #5 containers. **Container size is trade designation only.** Perennials in the larger containers are full, mature plants, which are great for planting into landscapes where large sized, immediate impact plants are desired. In preparation for shipping, perennials that are in flower are inserted individually into a paper sleeve for protection.

The invoiced price per plant depends upon the number of plants delivered of a species and size on an **individual** order and delivered in **one shipment** to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing.

See page 109 for perennial planting instructions.

On Pages 115-118 is a chart listing flowering months, sun, and soil tolerances of the perennials Glacier Nursery, LLC offers. This will help to plan a perennial garden with full season appeal.

Most of the perennials are overwintered or have grown at Glacier Nursery, LLC for two months or more, though occasionally perennials are purchased for resale to supplement plant availability. If you have any questions regarding the source of plants purchased from Glacier Nursery, LLC, feel free to ask as we are more than willing to share that information with you.

	5 - 24	25 - 49	50+	1 - 4
<u>Achillea millefolium</u>, Common White Yarrow 12-24”h x 18-24”w, full sun Zone 3				
Native Yarrow with white to yellow-white flowers. Reportedly deer resistant. Flowers June to September.				
ACW	#1	7.00		9.00
<u>Achillea millefolium</u> ‘Summer Pastel’, Summer Pastels Yarrow 18-24”h x 18-24”w, full sun Zone 3				
A perennial that has an array of color. Flowers with a mixture of white, yellow, orange, red and purple. Foliage is a dark green, different than other <i>Achillea</i> . Excellent plant for massing. Reportedly deer resistant. Flowers June to September.				
ASY	#1	7.00	6.75	9.00
<u>Achillea x ‘Moonshine’</u>, Moonshine Yarrow 18-24”h x 18-24”w, full sun Zone 3				
Bright yellow flowers with silvery foliage. Long lasting flowers with vigorous growth. Flowers June to September. Reportedly deer resistant.				
AMY	#1	7.00	6.75	6.50 9.00
<u>Achillea x ‘Paprika’</u>, Paprika Yarrow 18-24”h x 18-24”w, full sun Zone 3				
Intense red flower clusters with small yellow centers and green foliage. Long lasting flowers. Very dramatic when massed. Flowers June to September. Reportedly deer resistant.				
APY	#1	7.00	6.75	6.50 9.00

	5 - 24	25 - 49	50+	1 - 4
<u>Achillea x ‘Terracotta’</u>, Terracotta Yarrow 18-24”h x 18-24”w, full sun Zone 4				
Pale orange colored flowers. Late July/August flower. Reportedly deer resistant.				
ATY	#1	7.00	6.75	9.00
<u>Aegopodium p. ‘Variegatum’</u>, Snow on the Mountain 10-15”h x 12-24”w, partial shade Zone 3				
Low, dense mass of white edged foliage. Spreads by underground stolons. An indestructible ground cover. Flowers in June.				
APV	3½”	3.75		4.75
	#1	7.00	6.75	6.50 9.00
<u>Ajuga reptans ‘Bronze Beauty’</u>, Bronze Beauty Ajuga 6-8”h x 12-15”w, partial to full shade Zone 3				
Strong growing perennial that forms a tight mat in spreading habit. Bronze foliage and blue flower spikes. It is an excellent ground cover with an attractive flower in June and July.				
ABB	3½”	SOLD OUT		
	#1	7.00	6.75	9.00
<u>Ajuga reptans ‘Catlin’s Giant’</u>, Catlin’s Giant Ajuga 6-10”h x 12-15”w, partial to full shade Zone 3				
A larger leaf form of <i>Ajuga</i> with 6” purple and green foliage. Creates a dense ground cover with purple flower spikes in June and July.				
ACG	#1	7.00		9.00
<u>Alcea rosea ‘Chater’s Double Hybrids Mix’</u>, Double Mix Hollyhock 72-84”h x 24-36”w, full sun Zone 3				
Tall, straight spikes of yellow, pink and maroon flowers. Flowers June through August.				
ADH	#1	8.75		10.75
<u>Alchemilla mollis ‘Thriller’</u>, Thriller Lady’s Mantle 18-24”h x 18-24”w, full to partial sun Zone 4				
Refined mounded habit. Use for edging or ground cover. Small yellow flowers atop green woolly textured leaves. Flowers June to July.				
ALM	#1	7.75		9.75
<u>Allium cernuum</u>, Nodding Onion 12-18”h x 15”w, full sun Zone 3				
Native throughout the United States with white to pink flowers and glaucous, lightly wax coated leaves. Flowers May to June.				
ANO	#1	7.00		9.00
<u>Allium lusitanicum ‘Summer Beauty’</u>, Summer Beauty Ornamental Onion 18-24”h x 15”w, full sun Zone 4				
Large pale-pink flowers, 1-2” balls atop thin green stems. Flowers May to June.				
ASO	#1	9.75		11.75
<u>Allium senescens subsp. senescens ‘Mongolian Gem’</u>, Pink Ornamental Onion 15-18” x 18”w, full sun Zone 3				
Large 2” flower balls atop 18” stems with blue-green foliage. Flowers May to June.				
AMO	#1	7.75		9.75

		5 - 24	25 - 49	50+	1 - 4
<u>Anaphalis margaritacea</u>, Pearly Everlasting		12-36"h x 12-18"w, full to partial sun			Zone 2
Tough native that thrives throughout most of North America. Flowers have white persistent bracts around a yellow center. Great for dried flowers. Narrow gray-green, almost woolly, narrow leaves. Flowers July through September.					
APE	#1	7.75			9.75
<u>Anemone sylvestris</u>, Snowdrop Anemone		12-15"h x 12-15"w, partial to full shade			Zone 4
Large 2" fragrant white flowers from May to June.					
ASD	#1	7.75	7.50	7.25	9.75
<u>Antennaria dioica</u> 'Rubra', Pink Pussytoes		4-6"h x 10-12"w, full sun			Zone 4
A furry, pink flower sits on top of a short stalk. Great for rock walls and gardens. Flowers in May/June. Adapted.					
ADR	#1	7.75			9.75
<u>Aquilegia caerulea</u>, Colorado Blue Columbine		12-36"h x 12-18"w, full to partial sun			Zone 3
Large blue flowers with white centers. Colorado state flower. Reportedly deer resistant. Flowers May/June.					
ACB	#1	7.75			9.75
<u>Aquilegia caerulea</u>, Red and White Columbine		18-24"h x 12-18"w, full to partial shade			Zone 3
Attractive foliage that is good for massing. Reportedly deer resistant. Flowers May/June.					
ARW	#1	7.75	7.50		9.75
<u>Aquilegia canadensis</u>, Columbine		18-30"h x 18-24"w, full to partial shade			Zone 3
Large red outer flowers and yellow center flowers. Reportedly deer resistant. Flowers May/June.					
ARC	#1	7.75			9.75
<u>Aquilegia chrysantha</u>, Yellow Columbine		24-36"h x 18-24"w, full to partial sun			Zone 3
Yellow flowering, adapted from a Southwest native. Reportedly deer resistant. Plant Select 2001. Flowers in May/June.					
ACY	#1	9.75	9.50		11.75
<u>Aquilegia</u> 'McKana's Giant', McKana's Giant Columbine		24-36"h x 18"w, full to partial sun			Zone 3
A variety of pastel spurred flowers in early summer. Self-sows easily and not always true to parent color. Reportedly deer resistant. Flowers May/June.					
AMG	#1	7.75	7.50		9.75
<u>Aquilegia</u> 'Origami Blue and White', Columbine		12-18"h x 12-18"w, full to partial sun			Zone 3
Large outer blue flowers with white centers and attractive foliage that is good for massing. Reportedly deer resistant. Flowers May/June.					
ABW	#1	7.75	7.50		9.75
<u>Arabis alpina</u> 'Compinkie', Compinkie Rockcress		6-9"h x 9-12"w, full to partial sun			Zone 3
Short, spreading habit. Numerous small pink flowers above delicate foliage. Compact growing plant suitable for rock gardens. Flowers in April/May. Deadhead after flowering.					
ACP	#1	7.75			9.75

Perennials					85
	5 - 24	25 - 49	50+	1 - 4	
<u>Arabis alpina</u> ‘Snow Cap’, Snow Cap Rockcress 6-9”h x 9-12”w, full to partial sun Zone 3					
Short, spreading habit. Profusion of small white flowers above delicate foliage. Compact growing plant suitable for rock gardens. Flowers April/May. Deadhead after flowering.					
ASC	#1	7.75		9.75	
<u>Arctostaphylos uva-ursi</u> ‘Massachusetts’, Massachusetts Kinnikinick 6-12”h x 24-48”w Zone 3					
Full to partial shade. This type of Kinnikinick looks similar to the native type, although this selection is slightly taller. Flowers pink in June and foliage turns from green to red-orange in the fall/winter months. Reportedly deer resistant.					
AUM	3½”	3.75		4.75

<i>Coreopsis verticillata</i> ‘Zagreb’, Threadleaf Coreopsis 12-15”h x 15-18”w, full sun Zone 3							
Bright, golden flowers on a small rounded plant. Drought tolerant. Flowers May to June.							
CVR	#1	7.75			9.75		
<i>Dianthus barbatus</i> ‘Indian Carpet’, Indian Carpet Dianthus 8-12”h x 8-12”w, full to partial sun Zone 4							
Mixed shades of red and pink. Rich green foliage. Flowers May through August.							
DIC	#1	7.00	6.75	6.50	9.00		
<i>Dianthus deltoides</i> ‘Brilliant’, Maiden Pink 6-8”h x 9-15”w, full sun Zone 3							
Spreading mats of narrow leafed foliage, producing hundreds of vivid red to fuchsia flowers in early summer.							
DMP	#1	7.00			9.00		
<i>Dianthus gratianopolitanus</i>, Bath’s Pink 3-6”h x 12-18”w, full sun Zone 4							
Pink double flowers spring through frost. Mounded gray-green foliage remains evergreen. Good for rock gardens. Flowers in June.							
DCP	#1	7.00	6.75		9.00		
<i>Dianthus gratianopolitanus</i> ‘Feuerhexe’, Firewitch Dianthus 6-8”h x 9-12”w, full sun Zone 4							
Deep raspberry-red flowers on a tight blue mound of grass-like foliage make this German cultivar a winner. Flowers May through August.							
DFW	#1	7.75	7.50	7.25	9.75		
<i>Dicentra spectabilis</i>, Pink Bleeding Heart 24-36”h x 24-36”w, partial sun to shade Zone 3							
An old fashioned favorite with the unusual pink flower shape dripping off graceful stems in the spring. Reportedly deer resistant. Flowers May/June.							
DPB	#1	7.75	7.50		9.75		
<i>Dicentra spectabilis</i> ‘Alba’, White Bleeding Heart 24-36”h x 24-36”w, partial sun to shade Zone 3							
Similar to Pink Bleeding Heart, except that flowers are white. Reportedly deer resistant. Flowers May/June.							
DWB	#1	7.75			9.75		
<i>NEW! Digitalis</i> ‘Dalmation Purple’, Dalmation Purple Foxglove 24-36”h x 12”w, full/partial sun Zone 4							
Very large lilac-purple colored flower spikes that are quite showy in the garden during June and July.							
DDP	#1	7.75			9.75		
<i>Digitalis purpurea</i> ‘Foxy’, Foxglove 24-36”h x 18”w, full to partial sun Zone 4							
A biennial that often reseeds itself. Tall flower covered spikes appear in May through July. Mixed colors include white, lavender and purple. Reportedly deer resistant.							
DFP	#1	7.75			9.75		
<i>Echinacea purpurea</i> ‘Magnus’, Purple Coneflower 24-36”h x 24”w, full sun Zone 3							
A well behaved perennial with showy purple, daisy-like flowers in late summer and into the fall. The dried seed heads also provide winter interest. Flowers August/September. Susceptible to winter kill.							
EPM	#1	7.75	7.50	7.25	9.75		

		5 - 24	25 - 49	50+	1 - 4	89
<u>Echinacea p. ‘Prairie Splendor’, Prairie Splendor Coneflower</u>	18-24”h x 18-24”w, full sun					Zone 3
Shorter growing rose-pink flowers that last longer than other selections. Flowers August through September.						
EPS	#1	7.75	7.50		9.75	
<u>Echinacea purpurea ‘White Swan’, White Swan Coneflower</u>	24-36”h x 18- 24”w, full to partial sun					Zone 3
White petals surround a greenish central disk. Flowers August/September. Susceptible to winterkill.						
EWS	#1	7.75	7.50		9.75	
<u>Echinacea pallida, Pale Purple Coneflower</u>	24-36”h x 12-18”w, full to partial sun					Zone 4
Thin flower petals and narrower foliage distinguish this from the cultivated Purple Coneflower. Native to the midwest. Can grow tall and does best in drier sites. Susceptible to winterkill.						
EPP	#1	8.75			10.75	
<u>Echinops ritro, Globe Thistle</u>	24-36”h x 15”w, full sun					Zone 4
An ornamental thistle. Round metallic-blue flower heads sitting atop rich green toothed leaves. Flowers July through September.						
ERT	#1	7.75			9.75	
<u>Erigeron speciosus ‘Azure Fairy’, Azure Fairy Fleabane</u>	15-18”h x 15-18”w, full sun					Zone 2
Aster-like flower but flowers earlier in the summer, June/July. Pale to dark blue flowers.						
EAF	#1	SOLD OUT				
<u>Eriogonum umbellatum ‘Kannah Creek’, Buckwheat</u>	6-12”h x 12-24”w, full to partial sun					Zone 3
Low growing, green foliage, with a white underside that has an excellent purple-red fall color. Yellow flowers in May/June that age to orange in color. 2007 Plant Select.						
EKC	#1	9.75			11.75	
<u>Eupatorium dubium ‘Little Joe’, Little Joe Joe-Pye Weed</u>	36-48”h x 24-36”w, full sun					Zone 3
Slightly more compact selection, which has sturdy four foot stems that hoist pink-purple flowers above almost anything else in the perennial garden. Flowers July through September.						
ELG	#1	7.75			9.75	
<u>Eupatorium maculatum ‘Gateway’, Joe Pye Weed</u>	60-72”h x 36”w, full to partial sun					Zone 3
Excellent plant for the back of borders due to the final height. Lavender flowers in July through September. Foliage is green with red stems.						
EMG	#1	7.75			9.75	
<u>Euphorbia polychroma, Cushion Euphorbia</u>	12-18”h x 18-24”w, full to partial sun					Zone 5
Soft green leaves turn brilliant red in the fall. Yellow bracts in early spring May/June.						
ECE	#1	7.25			9.25	
<u>Euphorbia polychroma ‘Bonfire’, Cushion Spurge</u>	12-18”h x 18-24”w, full to partial sun					Zone 4
Yellow bracts bloom in the spring atop an attractive mound of deep purple, red, orange and green foliage. The soft leaves deepen to burgundy red as the season progresses before turning a rich red in autumn. Excellent spreading mound in the garden.						
EPB	#1	7.75			9.75

HCS	#1	7.75		9.75	
We do not force our perennials into flower in the greenhouse. This is best for most landscapers and some retail customers because our plants are synchronized with Montana’s weather and therefore are not as vulnerable to early season frost as forced perennials or plants brought in from warmer climates.

SGD	#1	7.00				9.00	
<i>Sedum album ‘Coral Carpet’</i>, Coral Carpet Stonecrop 1-4"h x 6-12"w, full sun Zone 4							
Good rock garden plant. Changes from green to reddish in late fall/winter. Flowers June/July.							
SCT	#1	7.00				9.00	
<i>Sedum kamtschaticum</i>, Yellow Stonecrop 6-9"h, spreading mounds, full sun Zone 3							
An evergreen with dark, glossy green foliage on prostrate stems, bearing orange to yellow showy flowers in July/August.							
SVC	#1	7.00				9.00	
<i>Sedum rupestre ‘Blue Spruce’</i>, Blue Creeping Stonecrop 4-6"h x 12"w, full sun Zone 4							
Blue succulent leaves look like fat spruce needles. Yellow flowers in July/August quite showy in summer.							
SBC	#1	7.00				9.00	
<i>Sedum spurium ‘Dragon’s Blood’</i>, Dragon’s Blood Sedum 2-6"h, spreading mounds, full sun Zone 3							
Evergreen. Cold weather turns the foliage red. Stems are red year round. Pink flowers June through August.							
SDB	3½"	3.75				4.75	
	#1	7.00	6.75	6.50		9.00	
<i>Sedum x ‘Autumn Joy’</i>, Autumn Joy Sedum 12-18"h x 18-24"w, full sun Zone 3							
Foliage is light green and flowers are small and pink, creating a dome effect over the plant. Upright, spreading habit. Flowers in July through September.							
SAJ	#1	7.75	7.50			9.75	
<i>Sedum x ‘Vera Jameson’</i>, Vera Jameson Sedum 6-9"h x 9-12"w, full sun Zone 3							
Deep pink flowers August through September and blue-green foliage that turns maroon in the fall.							
SVJ	#1	7.75				9.75	

102	Perennials				
	5 - 24	25 - 49	50+	1 - 4	
<u>Sempervivum tectorum</u>, Hen & Chicks 3-6"h x 9"w, full sun to partial shade Zone 3					
Indestructible rosettes of fleshy leaves with a cactus-like appearance. Commonly used as ‘tuck-in’s’ on rock walls. The flowers are pink to red, about 1” across, appearing in July/August.					
SHC	#1	7.00		9.00	
<u>Solidago canadensis</u> ‘Crown of Rays’, Crown of Rays Goldenrod 24-30"h x 18-24"w Zone 4					
Full sun to partial shade. Sturdy, bright yellow flowering selection. Large growing. July/August flowering. Reportedly deer resistant.					
SSC	#1	SOLD OUT			
<u>Solidago</u> ‘Little Lemon’, Goldenrod 12-18"h x 12-18"w, full sun Zone 5					
Shorter growing Goldenrod with lighter yellow flowers.					
SLL	#1	SOLD OUT			
<u>Stachys lanata</u>, Lamb’s Ears 18-24"h, spreading habit, full sun to partial shade Zone 4					
Also known as <i>Stachys byzantina</i> or <i>Stachys olympica</i> , these fuzzy silver leafed specimens add visual interest to any garden border. Tiny purple flowers appear on the stalks in June/July. Reportedly deer resistant.					
SLE	#1	7.75		9.75	
<u>Tanacetum coccineum</u> ‘Robinson’s Hybrids’, Painted Daisy 24"h x 24"w, full sun to light shade Zone 4/5					
Colors range from vivid purple to some interesting variations on red, all with a yellow center. Finely cut foliage with flowers rising out of it on sturdy stems. A good cut flower. Long lasting. May/June flowering.					
TPD	#1	7.75		9.75	
<u>Thymus praecox</u> ‘Coccineus Major’, Red Creeping Thyme 1-3"h x 12-18"w, full to partial sun Zone 4					
Deep pink to rose-red flowers. Evergreen foliage that turns bronzy in the fall. June through August flowering. Reportedly deer resistant.					
TRC	3½"	3.75	3.45	4.75	
<u>Thymus praecox</u> ‘Pseudolanuginosus’, Woolly Thyme 1-3"h x 18-24"w, full to partial sun Zone 4					
Low growing, dense mat of woolly gray little leaves. Has tiny pink flowers in the spring. A good ground cover for rock pathways. Reportedly deer resistant. Flowers June through August.					
TWT	3½"	3.75	3.45	4.75	
<u>Thymus serpyllum</u>, Mother of Thyme 3-6"h x 18-24"w, full to partial sun Zone 4					
Dark green foliage and pale lavender flowers. Flowers June through August. Reportedly deer resistant.					
TMO	3½"	3.75	3.45	4.75	
<u>Tradescantia</u> ‘Concord Grape’, Spiderwort Concord Grape 18"h x 15"w, full to partial shade Zone 3					
Purple flowers June through August. Trim foliage back after flowering to promote more reflowering into August.					
TCG	#1	7.75		9.75	
In preparation for shipping, perennials in flower are inserted individually into a paper sleeve for protection.					

	5 - 24	25 - 49	50+	1 - 4	Perennials	103
<u>Trollius ledebourii</u> ‘Golden Queen’, Orange Globe Flower 24-36"h x 24"w, full sun to partial shade Zone 3						
Partial to moist locations. This plant’s exotic flowers have an unusual shape and a brilliant orange or yellow color. Flowers in May/June. Attractive foliage after flowering. A good plant to mass along the water’s edge.						
TLB	#1	7.25		9.75		
<u>Veronica liwanensis</u>, Turkish Speedwell 1-3"h x 12-18"w, full to partial sun Zone 3/4						
Small, oval, glossy leaves that tolerate light foot traffic. Blue flowers in June/July. Plant Select 1997.						
VTS	#1	7.25		9.75		
<u>Veronica spicata</u> ‘Icicle’, Icicle Speedwell 18-24"h x 18-30"w, full sun to partial shade Zone 3						
White flowering in June through September. Hardy.						
VIW	#1	7.75		9.75		
<u>Veronica spicata</u> ‘Rotfuchs’, Red Fox Speedwell 12-18"h x 12"w, full sun to partial shade Zone 3						
Deep pink flower spikes in June through September. Does best in well drained soils, as do all Speedwells.						
VRF	#1	7.75		9.75		
<u>Veronica spicata</u> ‘Royal Candles’, Royal Candles Speedwell 12-15"h x 12"w, full sun to partial shade Zone 4						
Compact selection with dark blue flower spikes in June through August.						
VRC	#1	7.75	7.50	9.75		
<u>Veronica</u> ‘Sunny Border Blue’, Sunny Border Blue Speedwell 15-24"h x 12"w Zone 4/5						
Full sun to partial shade. Adaptable to many situations. Dark blue flower spikes in June through September.						
VSB	#1	7.75		9.75		
<u>Veronica</u> x ‘Tidal Pool’, Creeping Speedwell 2-3"h x 18-30"w, full to partial sun Zone 4						
Silvery blue-green leaves make this dense, fast spreading speedwell an attractive ground cover, perfect along pathways and in rock gardens. Masses of white-eyed violet flowers cover the plant from late April to mid-May. Adaptable to many situations.						
VTP	#1	7.75	7.50	9.75		
<u>Yucca glauca</u>, Soapweed 24"h x 24-36"w, full sun Zone 4						
Good for hot dry locations in the rock garden or foundation planting. Blue-green leaves lend a spiked look to the landscape. White flowers on a tall spike in July/August. Reportedly deer resistant.						
YGA	#1	11.00	10.75	13.00		
<u>Zauschneria garrettii</u> ‘Orange Carpet’, California Fuchsia 4-6"h, 12-18"w, full sun to partial shade Zone 4						
Selected from a native stand in Idaho, this ground cover has numerous orange scarlet flowers in July/August. Plant Select 2001.						
ZOC	#1	8.75		10.75		

To maintain attractive plants throughout the selling season, the perennial program requires numerous plantings to stage the crops. Most crops have two planting dates or more. This ensures customers receive plants that are not overgrown, but rather appropriately sized throughout the entire selling season.

Vines

<u>Clematis</u>, Clematis full to partial sun				Zone 2/3
Flowering vines easily grown if their roots are in the shade and their tops are in the sun. Beautiful climbing vine for fences, rock walls and trellises. Flowers throughout the summer.				
Available in White (CXW) , Pink (CXP) , Red (CXR) and Blue (CXB) flowering selections.				
	#1	15.75		17.75
<u>Euonymus fortunei</u> ‘Coloratus’, Purple Wintercreeper 12-18”h x 24-48”w, full to partial sun				Zone 4/5
Broadleaf evergreen that mounds and will climb if given support.				
EPW	#1	11.50		13.50
<u>Humulus lupulus</u> ‘Bianca’, Bianca Ornamental Hops				Zone 3
Lemon-yellow leaves differentiate this from Nugget Hops. Prefers partial shade.				
HBH	#1	SOLD OUT		
<u>Humulus lupulus</u> ‘Cascade’, Cascade Ornamental Hops				Zone 4
Dark green foliage with a light yellow cone. Can be used for brewing beer.				
HCA	#1	11.50		13.50
<u>Humulus lupulus</u> ‘Comet’, Comet Ornamental Hops				Zone 4
Light green foliage in the spring, turning darker throughout the summer.				
HCM	#1	SOLD OUT		
<u>Humulus lupulus</u> ‘Nugget’, Nugget Ornamental Hops				Zone 3
Fast growing vine with a green maple type leaf. Produces yellow-green flowers in the spring and a papery cone-like fruit in early fall.				
HHP	#1	11.00		13.50
<u>Humulus lupulus</u> ‘Willamette’, Willamette Ornamental Hops				Zone 4
Dark green foliage with a golden cone. Can be used for brewing beer.				
HLW	#1	SOLD OUT		
<u>Hydrangea anomala petiolaris</u>, Climbing Hydrangea sun or shade				Zone 4/5
For protected locations. This vine has large, fragrant, white flowers in early July.				
HAP	#1	17.50		19.50
<u>Lathyrus latifolius</u>, Perennial Sweet Pea				Zone 3
Long lasting flowers in late spring through summer. Mixed colors of white, red and purple. Will climb or just form a viney mat.				
LSP	#1	8.75		10.75
<u>Lonicera</u> ‘Mandarin’, Mandarin Honeysuckle				Zone 3
Similar to the Dropmore Scarlet in hardiness and its vigorous growth habit. This Honeysuckle has an orange-yellow tubular flower and darker green leaves. Flowers in early summer.				
LMH	#1	14.50		16.50
Phone: (406) 755-2248		(800) 700-8566		

	5 - 24	25 - 49	50+	1 - 4
--	--------	---------	-----	-------

<u>Lonicera x brownii</u> ‘Dropmore Scarlet’, Dropmore Scarlet Honeysuckle				Zone 3
Hardy tall climbing Honeysuckle with bright orange-scarlet tubular flowers in early summer.				
LXD	#1	14.50		16.50
<u>Parthenocissus quinquefolia</u> (inserta), Virginia Creeper (Woodbine)				Zone 3
Large leafed, rapid growing vine clinging to fences and masonry. Excellent deep red-maroon fall color and blue-black fruit. Native throughout Eastern U.S.				
PQN	#1	9.75		11.75
	#2	SOLD OUT		
<u>Parthenocissus quinquefolia</u> ‘Engelmanni’, Engelman Ivy				Zone 3
Small leafed, slower growing Ivy with similar clinging features as above and also possesses a red fall color.				
PQE	#1	SOLD OUT		
<u>Vinca minor</u>, Common Periwinkle 4-6”h x 12-15”w				Zone 4
Shade tolerant plant that has small dark green leaves and flowers in April/May with large blue-purple flowers.				
VCP	#1	8.75		10.75
<u>Wisteria macrostachya</u> ‘Blue Moon’, Blue Moon Wisteria				Zone 4
Hardest selection of Wisteria. Lavender-blue flowers.				
WBM	#1	14.00		16.00

To maintain attractive plants throughout the selling season, the perennial program requires numerous plantings to stage the crops. Most crops have two planting dates or more. This ensures customers receive plants that are not overgrown, but rather appropriately sized throughout the entire selling season.

Grasses

<u>Andropogon gerardii</u>, Big Bluestem 5-8'h x 18-30”w				Zone 4
Native warm season grass that forms large clumps. Yellow to purple seed heads in the late summer/fall.				
ABL	#1	8.75		10.75
<u>Bouteloua gracilis</u>, Blue Grama Grass 18-24”h x 12-24”w				Zone 3
Native warm season grass throughout the Great Plains. Forms dense tufts, and the seed heads are unique and one sided, folding downward.				
BGB	#1	9.75		11.75
<u>Bouteloua gracilis</u> ‘Blonde Ambition’, Blonde Ambition Blue Grama 12-30”h x 24-36”w				Zone 4
Ornamental selection of the native Blue Grama Grass, noted for the showy flower display late in summer and through the fall. Warm season grass growing in dense tufts. 2011 Plant Select.				
BAB	#1	12.00		14.00

106	Grasses					Grasses	107
		5 - 24	25 - 49	50+	1 - 4		
<u>Calamagrostis brachytricha</u>, Korean Feather Reed Grass 36-48”h x 24-36”w Zone 4							
Cool season, clump forming grass. Green leaves. Open flower and seed head unlike other <i>Calamagrostis</i> .							
2009 Plant Select. Later flowering than <i>Calamagrostis x acutiflora</i> .							
CKO	#1	8.75	8.50	8.25	10.75		
<u>Calamagrostis x acutiflora</u> ‘Avalanche’, Avalanche Feather Reed Grass 36-48”h x 24-36”w Zone 4							
Variegated Feather Reed Grass with white center of leaf. Shorter than Overdam Reed Grass. Cool season.							
CAF	#1	SOLD OUT					
<u>Calamagrostis x acutiflora</u> ‘Karl Foerster’, Feather Reed Grass 36-48”h x 18-24”w Zone 4							
One of the earliest flowering <i>Calamagrostis</i> . This selection has showy seed heads in the fall. Tremendously popular.							
CKF	#1	7.75	7.50	7.25	9.75		
	#2	14.00	13.00		17.00		
	#5	19.25			23.25		
<u>Calamagrostis x acutiflora</u> ‘Overdam’, Overdam Feather Reed Grass 36-48”h x 18-24”w Zone 4							
A Variegated Feather Reed Grass with subtle white margins and green center of leaf. Seed heads have a faint pink hue. An attractive grass to enhance your garden. Cool season.							
COD	#1	8.75	8.50	8.25	10.75		
<u>Carex nebrascensis</u>, Nebraska Sedge 24-36”h x 24-36”w Zone 3							
Wetland native plant that will tolerate saturation. Green to green-blue foliage. Cool season. Spreading rhizomes.							
CNS	#1	8.75			10.75		
<u>Carex pensylvanica</u>, Pennsylvania Sedge 6-12”h x 12-24”, full sun to full shade Zone 3							
Native to Eastern North America. Cool season. Can be used as a turf grass, tolerating occasional mowing. Spreading by stolons.							
CPS	#1	8.75			10.75		
<u>Carex utriculata</u>, Beaked Sedge 36-48”h x 24-36”, full sun Zone 2							
Also known as Northwest Territory Sedge. Native to the toughest climates of North America. Tolerates saturation. Cool season.							
CBK	#1	SOLD OUT					
<u>Chasmanthium latifolium</u>, Northern Sea Oats 24-48”h x 18-24”w Zone 4							
Cool season. Clump forming. Full sun to part shade grass that has a really unique flat seed head. Useful in dried arrangements. Leaf blades are bamboo-like. Native to the Midwest and the South Eastern U.S.							
CNO	#1	12.00			14.00		
<u>Deschampsia cespitosa</u>, Tufted Hair Grass 24-36”h x 18-24”w Zone 3							
Showy, glossy green blades in dense tufts. Wide spread native. Good for naturalizing. Cool season and clump forming. Can be used for a living roof cover. Re-seeds itself freely.							
DTH	#1	7.75	7.50	7.25	9.75		

		5 - 24	25 - 49	50+	1 - 4		
<u>Deschampsia cespitosa</u> ‘Goldtau’, Gold Dew Tufted Hair Grass 12-24”h x 12-24”w Zone 3							
Shorter growing selection of species. Cool season. Clump forming.							
DGT	#1	7.75	7.50	7.25	9.75		
<u>Festuca glauca</u> ‘Boulder Blue’, Boulder Blue Fescue 6-12”h x 6-12”w Zone 3							
Deep blue metallic color all summer. Slightly more compact than Elijah Blue Fescue.							
FBB	#1	8.75	8.50		10.75		
<u>Festuca glauca</u> ‘Elijah Blue’, Blue Fescue 6-10”h x 6-10”w Zone 4							
Maintains blue color all summer. Nice tidy habit. Cool season. Clump forming.							
FBF	#1	8.75	8.50		10.75		
<u>Festuca idahoensis</u>, Idaho Fescue 12-36”h x 9-18”w Zone 3							
Fine textured, narrow blue-green leaves. Drought tolerant, wide spread prairie native. Cool season. Clump forming.							
FIF	#1	8.75	8.50		10.75		
<u>Festuca idahoensis</u> ‘Siskiyou Blue’, Idaho Blue Fescue 12-15”h x 12-15”w Zone 4							
Attractive blue foliage and shorter in height than the species. Cool season. Clump forming.							
FSB	#1	8.75	8.50		10.75		
<u>Helictotrichon sempervirens</u>, Blue Oat Grass 24-40”h x 18-24”w Zone 4							
The arching stems turn from blue to a straw color. Cool season. Clump forming. Use on well drained sites.							
HBO	#1	7.75			9.75		
	#2	SOLD OUT					
<u>Hierochloa odorata</u>, Sweetgrass 24-30”h x 18-24”w Zone 3							
Native throughout most of North America and prized for the aromatic leaves. Survives in wetlands and moist prairies. Runners.							
HSG	#1	8.75			10.75		
<u>Koeleria macrantha</u>, Prairie Junegrass 6-24”h x 6”-12”w Zone 3							
Cool season, widespread, native bunch grass. Small clusters of plants with dense spikes arising from the center.							
KPJ	#1	8.75			10.75		
<u>Leymus arenarius</u> ‘Blue Dune’, Blue Dune Lyme Grass 24-36”h x 36-48”w Zone 4							
Powder-blue leaves grow from rhizomes below ground, which can be aggressive in lighter soils. Cool season but heat tolerant. Runners.							
LBD	#1	8.75			10.75		
<u>Leymus cinereus</u>, Basin Wildrye 3-5’h x 2-3’w Zone 3							
Native to the Great Plains and Rocky Mountain regions. Can be a robust grower under ideal conditions. Cool season bunch grass.							
LGB	#1	8.75			10.75		

		5 - 24	25 - 49	50+	1 - 4	
<i>Miscanthus sinensis ‘Gracillimus’, Maiden Grass</i>		4-5'h x 2-3'w				Zone 4
Fine arching foliage with silvery-white seed heads. Leaf blades are narrow, stiff and twist slightly. Reportedly deer resistant.						
MSM	#1	8.75			10.75	
<i>Miscanthus sinensis purpurascens, Flame Grass</i>		36-48" h x 24-36" w				Zone 4
Hardy grass with wide leaves. Very shiny seed heads in the fall. All the <i>Miscanthus</i> are warm season, clump forming. Reportedly deer resistant.						
MSF	#1	8.75	8.50		10.75	
<i>Molina caerulea ‘Skyracer’, Skyracer Moor Grass</i>		24-48" h x 36-48" w				Zone 4
Fine seed heads in August on wide leaf blades. Clump forming. Cool season grass.						
MMG	#1	9.25			11.25	
<i>Panicum virgatum ‘Heavy Metal’, Heavy Metal Switch Grass</i>		36-48" h x 24-36" w				Zone 4
Upright metallic-blue leaves that form a tight sod like mat. Bright yellow fall color. Runners.						
PHM	#1	8.75	8.50		10.75	
<i>Panicum virgatum ‘Shenandoah’, Switch Grass</i>		48-60" h x 18" w				Zone 4
Green blades in the spring, changing to burgundy in late summer into the fall. Warm season and sod forming. Runners.						
PSD	#1	7.75			9.75	
<i>Pennisetum alopecuroides ‘Hameln’, Dwarf Fountain Grass</i>		18-30" h x 12-18" w				Zone 5
Dwarf selection with attractive “bushy foxtail” seed heads in fall. Dense clump. Warm season.						
PHD	#1	11.00			13.00	
<i>Phalaris arundinacea ‘Picta’, Variegated Ribbon Grass</i>		18-24" h x 24-48" w				Zone 3
Green and white vertically striped blades. Vigorous grower. Difficult to confine to small area. Cool season.						
PRG	#1	8.75			10.75	
<i>Poa glauca ‘Blue Hills’, Blue Meadow Grass</i>		9-18" h x 9-12" w				Zone 2
Attractive blue colored grass with an airy seed head tolerating the moisture of a seasonally wet meadow, yet is also drought tolerant. Cool season, clump forming.						
PGH	#1	SOLD OUT				
<i>Pseudoroegneria spicata, Bluebunch Wheatgrass</i>		18-36" h x 18-24" w				Zone 3
Also known as <i>Agropyrum spicatum</i> . Native and common in the Northern Great Plains. Cool season. Establishes quickly. Not tolerant of high moisture. Runners.						
PBW	#1	8.75			10.75	
<i>Saccharum ravennae, Plume Grass</i>		6-8' h x 3-4' w				Zone 4/5
Very tall stiff stalks that may flower in our climate, but only during long growing seasons. If it flowers, it would have large white plumes. Large 3/4" wide leaf blade. Warm season. Clump forming.						
SPS	#1	8.75			10.75	

		5 - 24	25 - 49	50+	1 - 4	
<i>Schizachyrium scoparium, Little Bluestem Grass</i>		36-48" h x 18-24" w				Zone 4
This native grass has blue-gray foliage that turns red in autumn and golden in the winter. A clump grass, which will tolerate poor infertile soil. Warm season, clump forming, and drought tolerant.						
SLB	#1	8.75	8.75	8.50	10.75	
<i>Sesleria autumnalis, Autumn Moor Grass</i>		9-15" h x 12-18" w				Zone 4
Light green foliage and silver flower heads. Cool season, clump forming grass prefers full sun but accepts light shade. Drought tolerant once established.						
SAG	#1	SOLD OUT				
<i>Sesleria caerulea, Blue Moor Grass</i>		12-18" h x 12" w				Zone 4
Blue-green leaf blades on top, dark green beneath. Cool season, clump forming, tolerating some light shade.						
SBM	#1	8.75			10.75	
<i>Sorghastrum nutans ‘Indian Steel’, Indian Steel Indian Grass</i>		4-6' h x 2-3' w				Zone 3
Warm season grass with steel-blue leaves that turn yellow in the fall. Reddish-brown flowers are a striking contrast to the blue stems. Clump forming. Native.						
SIN	#1	8.75			10.75	
<i>Spartina pectinata, Prairie Cordgrass</i>		4-6' h x 2-3' w				Zone 3
Native, warm season spreads from a tufted clump by rhizomes. Prefers moist sites, but will tolerate seasonal dryness. Plant Select 1999.						
SPR	#1	8.75			10.75	
<i>Sporobolus heterolepis, Prairie Dropseed</i>		18-30" h x 18-24" w				Zone 3
Slower clump growing, warm season, native bunchgrass. Low maintenance, drought tolerant and long lived. Seed heads form in August and give off distinct aroma. Yellow to orange fall color.						
SPD	#1	8.75	8.50		10.75	

To maintain attractive plants throughout the selling season, the perennial program requires numerous plantings to stage the crops. Most crops have two planting dates or more. This ensures customers receive plants that are not overgrown, but rather appropriately sized throughout the entire selling season.

In preparation for shipping, perennials in flower are inserted individually into a paper sleeve for protection.

PERENNIAL PLANTING INSTRUCTIONS

Disturbing the container root plug at planting will improve the vigor and longevity of the plant in the landscape. This can be accomplished by using a reciprocating saw with a wood pruning blade as we have described with tree planting. Alternative methods may include slicing the container plug across the plug and butterflying, opening the plant plug in the hole. Another method if the roots of the plug are not tightly circling is to shave down the sides of the plant plug loosening the soil and roots from the plug. These methods assist the plant in establishing into the native soil as well as avoiding circling roots that might constrict plant growth and cause a plant to fall over. Further tips for planting are covered on our website, within the Resources Tab.

Heights: (In flower)

S=Short (<12")

M=Medium (12-24")

T=Tall (>24")

Form:

Clump - Forms a single clump that thickens with time.
Small clump - Small clump that stays small over time.
Upright clump - Taller than wide clump that thickens with time.
Runners - Spread by rhizomes or stolons, sod forming and spreading.

Season:

Cool season grasses - Starts growing early in spring and performs better when temperatures are cool and has sufficient water during warm season.

Warm season grasses - Slow to start growing, especially in our climate and perform better during drought. Cut plants back to 4-6" in the spring.

AJK #1 10.25 12.25
#2 **SOLD OUT**

***Aronia melanocarpa* 'Viking'**- see page 4. This is an excellent edible.

***Fragaria*, All Star Junebearing Strawberry** Zone 4
Resistant to verticillium wilt and ripens in June.
FSA #1 7.00 9.00

***Fragaria*, Fort Laramie Everbearing Strawberry** Zone 3
White spring flowers, long runners, and sweet red fruit throughout the growing season.
FSF #1 **SOLD OUT**

***NEW! Lonicera caerulea* 'Blue Berry', Blue Berry Honeyberry** 4'h Zone 3/4
Vigorous growing Honeyberry similar to other selections. Pollinates Tundra and Borealis.
LBB #2 20.00 23.00

***Lonicera caerulea* 'Aurora', Aurora Honeyberry** 3-4'h Zone 3
Sweet fruit similar to blueberries ripens in late June to early August. Pale yellow blooms in early spring. Pollinate with Borealis or Tundra. University of Saskatchewan bred.
LCA #2 **SOLD OUT**

***Lonicera caerulea* 'Borealis', Borealis Honeyberry** 4'h Zone 3
Sweet tasting blue fruit. Pollinate with Polar Jewel. University of Saskatchewan bred.
LCB #2 22.00 25.00

***Lonicera caerulea* 'Cinderella', Cinderella Honeyberry** 3'h Zone 3
Pollinates with most other varieties. Blends in the landscape with other shrub selections. Pollinates Borealis and Tundra.
LCH #2 22.00 25.00

***Lonicera caerulea* 'Tundra', Tundra Honeyberry** 4-5'h Zone 3
Produces a high yeild of sweet tasting blue fruit. Pollinate with Polar Jewel. University of Saskatchewan bred.
LCT #2 **SOLD OUT**

***Lonicera edulis kamtschatica* 'Polar Jewel', Polar Jewel Honeyberry** 3-4'h Zone 2
Sweet and similar in flavor to blueberries. Excellent choice for pollinating other Honeyberry varieties. Use a second selection of Honeyberry to pollinate Polar Jewel.
LPJ #2 **SOLD OUT**

112	Fruits, Herbs & Vegetables				
	5 - 24	25 - 49	50+	1 - 4	
<u>Rheum</u>, Chipmans Canada Red Rhubarb 3-4'h					
Perennial. Available as an established plant for those who don't want to wait a couple of years to harvest.					Zone 3
Claimed to be one of the sweetest of the red Rhubarbs. Great for pies and sauces.					
RBB	#2	14.00		17.00	
<u>Ribes ‘Hinnomaki’</u>, Hinnomaki Red Gooseberry 3-5'h					
Fruiting variety with large red berries. Purported to have exceptional flavor.					Zone 4
RHN	#2	14.50		17.50	
<u>Ribes <i>nigrum</i> ‘Consort’</u>, Consort Black Currant 3-6'h					
Black fruit with a strong flavor that ripens late in the season, as with many of the tart small fruits.					Zone 3
RBC	#2	14.50		17.50	
<u>Ribes ‘Pixwell’</u>, Pixwell Gooseberry 3-6'h					
Very productive. Fruit turns from pale green to pink when ripe.					Zone 4
RPG	#2	SOLD OUT			
<u>Ribes ‘Red Lake’</u>, Red Lake Currant 3-6'h					
Large red berries borne in clusters on 2-3 year old wood. As with many of the tart small fruits, add lots of sugar to make great jams and jellies.					Zone 4
RRK	#2	14.50		17.50	
<u>Ribes x <i>culverwelii</i></u>, Jostaberry 4-6'h					
Fruit is a blend of flavor between a gooseberry and a black currant.					Zone 3
RJB	#2	SOLD OUT			
<u>Rubus ‘Boyne’</u>, Red Raspberry 6'h					
Excellent for canning, freezing and dessert. Red fruit.					Zone 3
RRR	#2	14.00		17.00	
<u>Rubus ‘Caroline’</u>, Caroline Raspberry 4'h					
Self-fertile improved version of Heritage Raspberry. Red fruit.					Zone 4
RCL	#2	SOLD OUT			
<u>Rubus ‘Fallgold’</u>, Fallgold Raspberry 3-4'h					
Golden colored fruit. Produces two crops a season.					Zone 3
RFG	#2	SOLD OUT			
<u>Rubus ‘Heritage’</u>, Heritage Rasberry 5-6'h					
Red medium sized fruit. Everbearing, excellent flavor fruit. Robust growing.					Zone 4
RHT	#2	14.00		17.00	
<u>Rubus ‘Killarney’</u>, Killarney Raspberry 3-4'h					
Summer bearing from Manitoba. Red fruit.					Zone 3
RKR	#2	14.00		17.00	

	Fruits, Herbs & Vegetables				113
	5 - 24	25 - 49	50+	1 - 4	
<u>Rubus ‘Royalty’</u>, Royalty Raspberry 4'h					
Cross between purple and red Raspberry. Produces a large fruit.					Zone 4
RRY	#2	14.00		17.00	
<u>Rubus ‘Souris’</u>, Souris Raspberry 3-4'h					
Introduction from Canada that is an improved red, summer bearing Raspberry. Sweeter than Boyne.					Zone 3
RSU	#2	14.00		17.00	
<u>Vaccinium ‘Chippewa’</u>, Chippewa Blueberry 30-40”h					
Upright growth habit, large dark blue fruit. Bright red fall foliage. Blueberries require a more acidic soil. This can be accomplished by altering the acidity of the water to the plant, adding sulfur to the planting mix, or top dressing with granulated sulfur. A moist, well drained soil is desired.					Zone 4
VCB	#1	18.00		20.00	
<u>Vaccinium ‘Northblue’</u>, Northblue Blueberry 36-48”h					
One of the hardiest selections. See cultural notes above.					Zone 3
VNB	#1	18.00		20.00	
<u>Vaccinium ‘Northcountry’</u>, Northcountry Blueberry 18-24”h x 24-30”w					
Partially self-fruitful. Shorter growing blueberry. See cultural notes above.					Zone 4
VNC	#1	18.00		20.00	
<u>Vitis ‘Beta’</u>, Beta Grape					
Vigorous growing, blue-black excellent fruit for juice or jelly. Noted for its cold hardiness.					Zone 3
VBT	#2	15.00		18.00	
<u>Vitis ‘Bluebell’</u>, Bluebell Grape					
More hardy than Concord but similar purple fruit color suitable for eating.					Zone 4
VBB	#2	15.00		18.00	
<u>Vitis ‘Edelweiss’</u>, Edelweiss Grape					
Vigorous growing, disease resistant green-white grape. Dessert and wine grape.					Zone 4
VED	#2	SOLD OUT			
<u>Vitis ‘Frontenac Gris’</u>, Frontenac Gris™ Grape					
Copper-peach colored grape used for fresh eating, desserts and white wine making.					Zone 4
VFG	#2	SOLD OUT			
<u>Vitis ‘Kay Gray’</u>, Kay Gray Grape					
Hardy white wine grape.					Zone 4
VKG	#2	15.00		18.00	
<u>Vitis ‘Valiant’</u>, Valiant Grape					
An attractive blue grape that is good for juice or jelly.					Zone 3
VVG	#2	15.00		18.00	

Ground Covers (12” or less in height)

<i>Aegopodium p. ‘Variegatum’</i> , Snow on the Mountain	<i>Lysimachia</i> species, Moneywort

DEER RESISTANT AND SUSCEPTIBLE PLANTS

Deer resistant plants, now there is a conundrum. Deer are very resilient and their foraging abilities rival those of their smaller rodent cousins, mice. Are any plants truly deer resistant? **If** the deer population is large enough or **if** forage is limited, they will eat just about any plant, any place, any time.

There are, however, some plants deer prefer **not** to eat and some that are their plants of choice. That is how this list was compiled. We selected six different university or governmental agency sources from the internet and noted an ‘X’ for “Resistant to Deer” and an “A” for “Attracts Deer,” for each reference that was found. Thus, with a plant like Digitalis or Lamium that has six ‘X’s it is a good bet that these will not be bothered by deer.

This list is not complete but just for the plants we grow. The sources probably overlap some; that is, one source lists resistance and another source copies the work and the myth or fact is perpetuated. So, use this at your discretion, ask others what has worked, look in the landscape. What has been browsed what has not? And above all realize **no plant** is ever completely **deer resistant**.

Deer Resistant and Susceptible Plants
