WHAT'S NEW FOR 2022?

IT'S NEVER TOO EARLY TO ORDER Demand for plants was strong in 2021 and looks to continue into 2022. Please order early to secure plants for your projects.

ONE STOP SHOPPING for all your plant needs. We offer over 750 varieties of trees, shrubs, evergreens, and perennials. Our plants are suited to the rigors of Montana's climate and synchronized with Montana's seasons, late spring frosts, and early fall freezes.

WEEKLY DELIVERIES during the growing season throughout most of Montana. Orders received **by Thursday at 4:00 p.m.** are delivered by the following Friday afternoon (delivery location and order size affect this schedule).

COMPETITIVE DELIVERY COSTS Our 2021 freight charges on plant shipments averaged 8.8 percent of the total plant invoice.

UPDATES TO POLICIES AND PROCEDURES The current economic environment and scarcity of labor has necessitated updates to some of our business policies and procedures. Please review our Terms and Conditions as well as the Orders, Payments, and Pickup Information section on Pages 2, 3, and 4.

Thank you all for your past and future support!

PRICES:

TERMS AND CONDITIONS OF SALE

All prices are quoted in U.S. dollars, F.O.B. Kalispell, Montana and are subject to change without notice. The invoiced price per plant depends upon the number of plants ordered of a species and size on an individual order and delivered in one shipment to the same location. See Page 3 for specific pricing instructions.

- A two percent discount on plant material is offered to those with established credit who pay in full within 10 days of the invoice date (this does not apply to purchases made with credit cards).
- All payments go toward interest, freight, then the oldest invoices remaining (in that order).
- Special handling is charged at cost; see Cancellation, Restocking, and Late Season Pickup on Page 3.
- Glacier Nursery, LLC, charges freight on behalf of our carriers. A minimum freight charge will apply to
 orders we deliver through our carriers. Freight on deliveries will be computed on each individual truck
 and will be based on the volume of each customer and reflect rates at the time of shipment. Discounts
 are not offered on freight and all payments are applied toward freight first.
- Volume Rebate and an Early Order Discount is offered on the amount of the purchases made during the calendar year; see Rebate/Discount Schedule on Page 4.
- Interest of 1.5 percent per month equaling an annual rate of 18 percent (or the maximum allowable rate) will be charged on all accounts past 30 days. We appreciate your prompt payment.
- Prices in this catalog are effective for plants delivered after January 1, 2022.

TERMS:

- Customers should anticipate paying in advance, a week prior to shipment, until payment terms are established with completion of a credit application.
- Terms of 30 days net, from date of invoice, are extended to customers with established credit.
- Nursery stock travels at purchaser's risk and expense. Our responsibility ceases upon delivery to the carrier.
- Glacier Nursery, LLC, retains a vendor's interest in all goods until such goods have been paid for in full.
- Any legal actions by Glacier Nursery, LLC, shall be initiated in the jurisdiction of our choice. Glacier Nursery, LLC, will be entitled to all costs incurred enforcing this agreement, including attorney fees.
- A 50 percent deposit is required to hold stock for shipment or pickup after July 1, 2022. Trees held for
 pickup after July 1, 2022 with a deposit will be invoiced at the size they are at the time of delivery, not
 necessarily the size at which they were acknowledged. Deposits for plants held are applied to specific
 orders and will not be applied to any other orders, or to the account as a whole. Cancellation of the
 order will result in forfeiture of the deposit.

CLAIMS:

- Any claim regarding incorrect counts, breakage, or stock quality must be made in writing within 10 days of delivery of plants. Claims of stock viability for spring delivered material must be made no later than May 31, 2022. Claims for losses of goods while in transit must be filed with the carrier, not with Glacier Nursery, LLC. We will of course assist you, if necessary, in filing your claim with the carrier.
- · We cannot be responsible for the results secured in transplanting.
- Credits for nursery stock will be issued as replacement plants. Those situations where replacement plants are impractical will be subject to receiving replacement plants the following year.

GUARANTEE: We accept orders subject to crop conditions and with the understanding that we may cancel a portion of the order should injury befall our stock from causes beyond our control such as frost, hail, windstorms, drought, or other weather conditions, errors in count, disease and insect injury, or other natural causes. We warranty, to the extent of the purchase price only, that nursery stock sold is in good healthy condition when leaving our nursery, is true to name, and as described within recognized tolerances. Seller gives no further or other warranty, expressed or implied, and will under no circumstances be liable for more than the invoice value at the time of purchase. This warranty is not transferable and is void if payment is not made in full when due for the full contract price of all nursery stock shipped.

ORDERS, PICKUP INFORMATION, AND PAYMENTS

PLANT PRICING: All prices are quoted in U.S. dollars, F.O.B. Kalispell, Montana and are subject to change without notice. The invoiced price per plant depends upon the number of plants ordered of a species and size on an individual order and delivered in one shipment to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing.

ORDERS: Orders are placed with a scheduled ship date at the direction of the customer. The customer is responsible for informing us in writing of changes to the ship date. If the shipment or pick up of an order is delayed 30 days or more past the scheduled ship date, we will attempt to contact those with orders in excess of \$1000 to reschedule. Orders totaling less than \$1000 will be automatically cancelled. Failure to respond to our request for a revised ship date will result in cancellation of the order. Orders with a ship date extended beyond July 1, 2022 will require a deposit.

<u>PICKUP ORDERS</u>: NEW FOR 2022 is a MINIMUM ORDER OF \$200 FOR A CUSTOMER PICKUP. Orders that do not total \$200 or more will be subject to a \$25 surcharge. Customers picking up orders should arrive properly equipped with suitable tarps and rope to transport the stock. Failure to properly secure and cover your plants will nullify any guarantee of stock viability. We require at least 24 hours advance notice so we may have the order assembled and ready for pick up.

CANCELLATION, RESTOCKING, AND LATE SEASON PICKUP FEE: Plants that are readied and staged for shipping or pickup and subsequently cancelled less than 24 hours before scheduled pickup or delivery, or picked up by the customer and later returned will be assessed a 20 percent restocking fee. We begin covering our plants for winter during the third full week of October. Plants that are covered are unavailable for delivery or pickup. IF we can accomodate a late season delivery or customer pickup, the individual plants will be priced at 1-4 pricing regardless of the quantity ordered.

<u>CREDIT CARD PURCHASES</u>: Customers with prepayment terms as well as those with established credit may use a Visa, MasterCard, or Discover Card to purchase plants at Glacier Nursery, LLC. For customers with prepayment terms who choose to pay with a credit card, payment is expected within one day of pickup or receipt of delivery; payments made after that time will be subject to a 2.5 percent service charge. For customers with established credit, credit card payments must be made within 10 days of invoice; credit card payments made after 10 days will be subject to an additional 2.5 percent service charge. Payments made with credit cards **are not eligible** for the two percent discount for payment within 10 days. 4

DISCOUNT FOR PROMPT PAYMENT: A two percent discount is offered on plant material to those customers with established credit and credit applications on file who pay in full within 10 days of the invoice date. All payments go toward the **oldest** invoices remaining. **Payments made with credit cards are not eligible for the two percent discount for payment within 10 days.**

<u>ELECTRONIC PAYMENTS</u>: Checks may be mailed or sent via text message and are electronically deposited the day they are received. We can also accept credit card information or an account and routing number for a bank account over the phone.

REBATE/DISCOUNT SCHEDULE

VOLUME REBATE PLAN: The following Volume Rebate Plan is available to those who pay their accounts fully within 30 days of the invoice date **or** who pay **all** finance charges:

Total Volume of:	\$25,000 - 29,999	2%	\$70,000 - 79,999	7%
	\$30,000 - 39,999	3%	\$80,000 - 89,999	8%
	\$40,000 - 49,999	4%	\$90,000 - 99,999	9%
	\$50,000 - 59,999	5%	\$100,000 and up	10%
	\$60,000 - 69,999	6%		

The volume rebate will be computed on sales of plant material purchased in a calendar year. Those who do not pay in full within 30 days, do not pay all finance charges, or who make unreasonable claims will forfeit volume rebates. Rebate checks will be mailed before December 31 each year, or may be applied to your account as a credit for the following year. Volume rebate checks will not be issued for any account unpaid as of December 31, 2022. The Early Order Discount terms below are **in addition** to the Volume Rebate Plan.

EARLY ORDER DISCOUNT WITH EXTENDED TERMS: If you find yourself ordering next year's plants from this year's order, consider the advantage of our Early Order Discount. For all nursery stock ordered prior to September 30, 2021 and delivered between March 1, 2022 and May 15, 2022, you will receive:

- 2021 prices on your 2022 shipments.
- · Customers with approved credit will receive 60-day terms.
- Eligible for the Volume Rebate Plan as specified in the above paragraph.
- Early Order Discounts are based on the following schedule:

Total Early Order Volume:	\$20,000 - 29,999	2%	\$40,000 - 49,999	4%
	\$30,000 - 39,999	3%	\$50,000 and up	5%

- Only orders placed by September 30, 2021 and shipped **in full** by May 15, 2022 will be eligible for the above discounts. Plants delivered after May 15, 2022 will not be eligible.
- Customers who do not take their entire Early Order or who do not pay within 60 days will forfeit the Early Order Discount and will be re-billed at the current year's price, instead of the previous year's price.
- Early Order Discount customers will be mailed a check or receive a credit to their account upon payment in full for orders that are placed by September 30, 2021 shipped by May 15, 2022 and payment received as agreed. No discount will be offered on spring orders that are **not** paid as of July 15, 2022.
- To be eligible for the discount your order must be shipped as acknowledged.

PLANT INFORMATION

ACCLIMATED PLANT MATERIAL: In many cases, climatic conditions determine the success and failure of plants in the landscape. It is our aim to offer the customer plants that have been grown in our nursery for a period of years and have thrived under severe changes of weather. Please contact us and we will be able to assist you in determining a plant's suitability to your climate.

PICTURE TAGS: Picture tags are applied to plants bound for retail sales or per customer request. We do apply a "Grown in Montana" sticker to those plants that have been overwintered in Montana or have been spring planted and grown in the pot in which they are sold for three or more months. Our picture tags are purchased from suppliers and occasionally there is information on the tag that does not completely agree with our catalog descriptions. We may apply additional information stickers if the printed information is grossly inaccurate. We make every attempt to properly label all of our plants. If we should ever mislabel a plant, please notify us promptly and we will accept it for return and offer a full refund for the purchase price of the plant.

PLANTS PURCHASED FOR RESALE: Most of the deciduous trees, deciduous shrubs, and perennials we sell are overwintered at our nursery or have been grown in the pot in which they are sold for three months or more (two months for perennials). Most of our evergreens are grown by nurseries in our region; early spring shipments are generally overwintered here in Montana. We purchase plants for resale, paying strict attention to our sources both for plant quality and compatibility to our climate. We are more than willing to share information regarding the source of a plant purchased from Glacier Nursery, LLC.

We have tried propagating almost every species we sell here at Glacier Nursery, LLC, at one time or another and have found that some species grow fine in Montana **but** are not suited for production growing in our climate, our soil types, our watering regimes, or cannot be grown profitably by us. What we have found is that our customers **expect** quality first and accept the reality that Montana may not be where their plant was originally propagated and subsequently grown. As previously stated ask us; we are more than willing to share the location of where our plants were grown.

A WORD ABOUT HOW OUR CATALOG IS CONSTRUCTED AND SHOULD BE USED

NOMENCLATURE: We use the *Manual of Woody Landscape Plants* by Dr. Michael A. Dirr (fifth edition) as our primary source for botanical and common names. For native plants we use the USDA NRCS Plant Database.

HARDINESS: We have made an attempt, based on our experience and input from other knowledgeable nursery persons, to provide information on how these many species may perform here in Montana. Our experience suggests most of Western Montana would be classed as Zone 4, while much of Eastern Montana would be Zone 3, and other parts of Montana (due to elevation and especially exposure) would be Zone 2. Glacier Nursery, LLC, is located in Zone 4. Severity of winter temperatures does not completely predict hardiness in a state susceptible to extreme temperature fluctuations. The earliest severe cold in the fall and the plants preconditioning to winter also dictate hardiness.

One qualification regarding hardiness recommendations—there are numerous microclimates, both less severe (for example, sheltered areas around homes) and more severe (exposed/barren sites), where we can see a zone of hardiness different than within the general area. Please determine the zone where the plants are to be placed and use the enclosed information to help your customers attain the optimal level of success with their planting.

DESCRIPTIONS: The descriptions and uses of plants are based on our observations and experiences and, of course, are subject to your interpretation.

<u>SIZES</u>: These are cultivated as an average for what these plants might be expected to achieve as mature specimens here in the Montana landscape. As such, there are plants that may be larger or smaller; consequently these sizes should be used as guidelines.

<u>NATIVE PLANTS</u>: Native to us means **native to North America**. See Pages 22, 74, 87, and 114 for a list of our native plants. A website that helps determine the distribution of a species is available from the USDA Natural Resources Conservation Service Plant Database: <u>http://www.plants.usda.gov</u>.

<u>ORDERING HINTS</u>: It is more economical to order in quantities of **5 or more** whenever possible. At the beginning of each of the four product groups in the catalog is information noting the dimensions of the pots, weight of the finished plant in those pots, and a **general description** of the size of the plant to expect at delivery.

<u>CODE INFORMATION:</u> To expedite ordering, use the plant codes in our inventory system that are included just beneath the plant description in this catalog. You will notice the species is the first of the three characters. The second and third characters are selected from the species and/or cultivar on all but perennials. For perennials, the second and third characters represent the common name. Multi-stem and single-stem trees and shrubs are differentiated by the suffix 3 or 1, respectively, in the three-character code.

FALL PLANTING PRECAUTIONS: Our experience suggests that extra precautions need to be taken to successfully plant in the fall in Montana. Fall planting may result in higher plant mortality than spring planting due to variable fall weather **and** the care taken at planting.

All fall plantings require additional water <u>at planting</u> to settle the soil around the plants thus, eliminating air pockets and ensuring all the backfill and surrounding soils are saturated. **This needs to be repeated just before the ground freezes solid**. The following guidelines apply to the **minimum** volume of water required at each of these waterings: 10 gallons of water per caliper inch of the trees, 5 gallons of water per gallon of container.

Of additional concern, is that the plants need to be protected on the job site prior to planting. B&B material should be covered with wood chips or straw and watered. Container stock should be watered thoroughly and packed tight with the edges of the group insulated. All the plants should be stored on the ground, **not** on pallets, to avoid rapid freezing of the plants that happens when they are elevated above the ground. This will protect the plants from freezing rapidly or from drying out excessively. We would also recommend applying Wilt Pruf to all evergreens after planting to reduce the amount of moisture loss from the plant during the winter.

Any plant material that we need to special purchase for a fall planting should be in Montana by August 15 so it can acclimate to our colder climate. This will require a 50 percent deposit made on these plants by August 15 so that we can have them delivered to the nursery in a timely fashion.

As in our normal policy, our plants are warranted to be alive at the time of shipment. Every fall and winter is different and the success or failure of planting in the fall depends very much on the weather: how early it freezes, how much moisture we have before it freezes, and how much snow, cold, and sunshine we have during the winter. <u>We cannot be responsible for plant survival after delivery and transplanting</u>. We offer <u>no guarantee</u> that the plants will survive the winter and leaf out the following spring.

HOW TO USE OUR WEBSITE

7

www.glaciernursery.com: To assist our customers, we have a website to help with plant purchases.

Our availability is updated at least weekly. Our inventory numbers represent the present, not the future, so please contact us with orders that are for weeks or months in the future. Inventory is always changing, whether it is from the plants growing or orders being placed or adjusted. If you do not see what you are looking for on the availability list, feel free to give us a call, send us an email, or leave a comment in the 'Order Comments' box at checkout. We can let you know the status of that particular item. This is a quick and convenient way to order 24 hours a day. It is as easy as entering a number in the box to the right of the amount available and then adding it to your cart. Once you **submit** your order, you will receive an email confirmation and a call back from someone in the sales department confirming your order. We will not have a record of the plants you quoted unless you formally **submit** the order to us.

Another way to use the online ordering is for your bidding process when all you desire is an idea of what the plants will cost. Simply go through the ordering procedure and print your order out before submitting the actual order.

SUSTAINABILITY, MORE THAN A WORD TO US AT GLACIER NURSERY, LLC: Over the last 38 years we have instituted numerous cost saving procedures that also contribute to reducing our carbon footprint and allow us to operate in an environmentally friendly manner. Below are a list of the more significant procedures employed by Glacier Nursery, LLC.

- Reusing plastic pots that are returned from our customers (we pay four cents per gallon). Each year, over 60 percent of our plantings are into reused pots.
- Reusing all our cull and discarded plants by grinding them into compost, thus avoiding the need for topsoil and other potting media components that would need to be purchased and delivered.
- Chipping all our tree tops and eliminating plant material burning at Glacier Nursery, LLC. The chips are added to our potting mix. Diseased trees are chipped and disposed off site.
- Reusing all our runoff water from irrigation. None of our irrigation water drains off the farm; we reuse all runoff and mix the used water, after chlorine treatment, with fresh water in our irrigation system.
- Old pallets are dismantled and used as blocking on outbound shipments. Many of our outbound trucks return with the blocks that are used to stabilize the loads, reducing the need for new blocks.
- Cardboard boxes and pallets we receive with inbound plants are re-utilized as packing for outbound shipments. Used pallets and pots are made available to passersby on our highway frontage, keeping these products out of landfills.
- Pesticides and fertilizers are banded or applied on individual crops rather than broadcast applications. This reduces the quantity of pesticides and fertilizers used.
- We practice integrated pest management systems that reduce frequency of pesticide applications as well as minimizes the use of pesticides with a warning label.
- Use of electronic communication with customers for ordering, invoicing, and payments reduces paper usage and mail expenses.

SHADE, FLOWERING, AND FRUIT TREES

All plants are well branched and suited for either immediate sale in the retail yard or for planting into the landscape. Containerized plants are **established** and rooted into the media with roots to the edge of the plastic container. Potting media contains soil that helps retain moisture, nutrients, and reduces the number of plants that blow over in the wind. Below is a potting schedule guide:

4' trees are in #5 containers, 12" in diameter, 11" in depth; weighing ~ 25 pounds. Our most economical size. Lightly branched with four or more 12" or longer branches.

6' trees are in #7 containers, 14" in diameter, 11" in depth; weighing ~ 40 pounds. Generally 6' in height (species dependent) and nearing one inch caliper. Plants are not sized, therefore you pay one price for all plants of the same species in the same size container.

1.25" & 1.50" trees in #15 containers, 17" in diameter, 15" in depth; weighing ~ 100 pounds. 1.25" caliper and larger, trees have secondary branching and many are grown two growing seasons in the container, giving them a fuller appearance.

#20 containers, 19" in diameter, 17" in depth; weighing ~ 140 pounds. Intended to be comparable in fullness to small B&B trees of the same size. Many are grown two growing seasons in the container.

1.75" & 2" and larger trees are in #25 containers, 23" in diameter, 18" in depth; weighing ~ 200 pounds. Our largest container plants, which are grown to be comparable in size and fullness to mid-range B&B trees, 2" in caliper size. Most are grown for two growing seasons in the container. Approximately half are upshifts from #15 containers and the other half are field grown transplants.

For pricing, consider both the caliper (1.25" and up) of the plant **and** size of the container it is growing in. **Container size is trade designation only.**

Generally, 1.75" to 2.25" balled and burlap trees are in 28" baskets and 2.5" to 3" trees are in 32" baskets. There are exceptions to this criteria, please inquire for specific ball sizes. A trunk protector is applied for protection during handling.

The invoiced price per plant depends upon the number of plants ordered of a species and size on an individual order and delivered in one shipment to the same location. Orders are invoiced **individually** as they were placed and **are not combined** for volume pricing at shipping and delivery. Quantity column headings at the top of each page will help you price the quantity of plants you are looking for. Price breaks are offered at quantities of 5, 25, and 50+ for plants of the same species and container size. Only select items receive 25 or 50+ pricing.

Most of the trees are overwintered or have grown at Glacier Nursery, LLC for three months or more, though occasionally trees are purchased for resale to supplement plant availability. If you have any questions regarding the source of plants purchased from Glacier Nursery, LLC, feel free to ask, as we are more than willing to share that information with you.

Zone 3

5 - 24 25 - 49 50+ 1 - 4

PLANTING INSTRUCTIONS

It is imperative customers planting container trees remove the outer one inch of the root plug sides <u>and</u> bottom prior to planting. Cutting the root plug into a cube shape with a 12" prunning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

There are different guidelines for tree planting based on profession. Arborists differ from Landscape Contractors and Landscape Architects may differ from Nurserymen. Below are procedures that accommodate these differing professions. Dig the hole twice as wide as the container plug/root ball **but** only as deep as the root plug/ball. Preferably hand dig the last 3-6" so the root plug/ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom to the base of the tree trunk. Verify the top of the root plug/ball (as measured above) will be level, or slightly higher (3"), than the existing grade once placed in the hole. Trees are often killed, or have reduced vigor when planted too deep. Backfill with the native soil or a mix of no more than half soil amendments and native soil. Settle the soil with abundant water, mulch if desired, and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

For planting balled and burlap trees, follow the procedure outlined above. Additionally, handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment; this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters.

Abies - See Evergreens Page 76.

Acer ginnala, Amur Maple 15-20'

. . .

Small tree or large shrub with exceptional fall color and interesting bark. Irregular habit. Useful for smaller areas, especially beneath overhead utility lines. Multi-stem plants are grown with three or more stems.

AG1		#7	
		#15	1.25"
		#25	1.75"
AG3	multi-stem	#1	
	multi-stem	#2	
	multi-stem	#5	
	multi-stem	#7	~3'
	multi-stem	#15	4'
	multi-stem	#15	6'
	multi-stem	#25	8'
	multi-stem	B&B	10'

More trees are planted too deep than too shallow. Avoid placing the container plug/root ball on disturbed soil that might allow the plant to settle from its original planting depth. For a complete description of how we recommend planting trees, see Pages 8, 9, and 39.

A potentially hardier selection of the Silver and Red Maple hybrids. More of an upright grower and does not have such a sporadic or wild growing form as Autumn Blaze. This selection seems to have more Red Maple traits than Autumn Blaze which has more Silver Maple traits. Fall color is orange-red to burgundy.

Betula papyrifera, Paper Birch 40-50'

25 - 49

It is imperative customers planting container trees remove the outer one inch of the root plug sides <u>and</u> bottom prior to planting. Cutting the root plug into a cube shape with a 12" prunning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

More trees are planted too deep than too shallow. Avoid placing the container plug/root ball on disturbed soil that might allow the plant to settle from its original planting depth. For a complete description of how we recommend planting trees, see Pages 8, 9, and 39.

For B&B ball specifications and planting tips see Page 39.

Pollination of Apple Trees / Apple Color, Seasons and Uses Use two varieties from the same or similar flowering times. Early - Hazen, Norland, State Fair, Wealthy, Whitney Mid - Chestnut, Goodland, Honeycrisp, Honeygold, McIntosh, Red Barron, Sweet Sixteen Late - Haralred, Haralson (these two are not suitable pollinators for each other)									
Variety	Fruit Color	Flowers	<u>Ripening</u>	<u>Uses</u>					
Chestnut – Std (Crabapple)	Red	Early to Mid	Early Fall	Eating					
<u>Goodland – Std</u>	Red	Mid	Fall	Eating					
Haralred/Haralson – Std & Semi-Dwf	Red	Late	Fall	Eating					
Hazen – Std	Dark Red	Early	Summer	Eating and Baking					
Honeycrisp – Std & Semi-Dwf	Red	Mid	Early Fall	Eating					
Honeygold – Std	Yellow	Mid	Fall	Baking					
McIntosh – Std & Semi-Dwf	Red	Mid	Fall	Eating					
Norland – Std	Red	Early	Summer	Eating and Baking					
Red Barron – Std	Yellow-Red	Mid	Fall	Eating and Baking					
<u>State Fair – Std</u>	Red	Early	Summer	Eating and Baking					
Sweet Sixteen – Std & Semi-Dwf	Dark Red	Mid	Fall	Eating and Baking					
Wealthy– Std	Red	Early	Early Fall	Eating and Baking					
Whitney – Std (Crabapple)	Red	Early	Summer	Eating					

Standard Rootstock – All of our fruiting apples are available on a hardy rootstock (Zone 3). These trees generally attain a height of 20-25' and a width of 25' at maturity.

Semi-Dwarf Rootstock – Malling 7A – Some of our fruiting apples are available on a dwarfing rootstock that reduces the size of the tree by approximately 40 percent. Trees will be approximately 12-15' in height and width.

Mountain Ash should not be over watered, planted on sites with poor drainage, or planted deep. Planting slightly above grade (3-6") is beneficial for those selections that are slow to enter dormancy in the fall. This allows excess water to drain away from the tree and is especially useful where turf watering continues late into the fall. Mountain Ash, in particular, can benefit from this practice.

Fax: (406) 755-2249

www.glaciernursery.com

Trees planted in irrigated turf benefit from allowing the turf to dry in September, then water the trees heavily

before the ground freezes. This allows the trees to harden off for winter.

We grow a number of trees that are excellent for planting beneath overhead utility wires or on smaller sized properties. This list would include: Acer ginnala and tataricum; Amelanchier species; Crataegus species; Hydrangea paniculata species; Maackia amurensis; Malus species; Physocarpus opufolius 'Diabolo'; Prunus species; Pyrus usseriensis 'Bailfrost'; Sorbus decora; Syringa species; and Viburnum lentago.

<u>Caliper</u>	<u>Height</u>	Ball Diameter	<u> Approximate Wt Lbs</u>
1.75"	5'	28"	425
2"	6'	28"	475
2.25"	7'	28"	550
2.5"	8'	32"	550
3"	9'	32-36"	680
3.5"	10'	32-36"	680
4"	12'	36-44"	950

The above is only a guide. Plant species, root mass, soil type, and especially soil moisture are contributing factors to ball size and weight in addition to tree caliper.

TREE PLANTING INSTRUCTIONS

It is imperative customers planting container trees remove the outer one inch of the root plug sides and bottom prior to planting. Cutting the root plug into a cube shape with a 12" prunning blade seems the fastest and most complete method (a reciprocating saw does an excellent job). This reduces the opportunity for circling roots to grow unimpeded and potentially weaken or kill the tree as it matures.

There are different guidelines for tree planting based on profession. Arborists differ from Landscape Contractors and Landscape Architects may differ from Nurserymen. Below are procedures that accommodate these differing professions. Dig the hole twice as wide as the container plug/root ball but only as deep as the root plug/ball. Preferably hand dig the last 3-6" so the root plug/ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom to the base of the tree trunk. Verify the top of the root plug/ball, (as measured above) will be level, or slightly higher (3"), than the existing grade once placed in the hole. Trees are often killed, or have reduced vigor when planted too deep. Backfill with the native soil or a mix of no more than half soil amendments and native soil. Settle the soil with abundant water, mulch if desired and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

For planting balled and burlap trees follow the procedure outlined above. Additionally, handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment; this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters.

To provide a quality and properly established plant for customers, container Lilacs and specific Viburnums are grown for a second spring. These species are immature with only one year of growth in a container and a second year makes for a more robust plant.

Phone: (406) 755-2248

The #15 shrubs provide an excellent substitute and great value when used as a replacement for B&B shrubs. Glacier Nursery, LLC offers #15 shrubs selections in the following species: Acer, Amelanchier, Cornus, , Physocarpus, Prunus, Salix, Sorbaria, Syringa and Viburnums. We have added #25 container Acer ginnala, Amelanchier x. 'Autumn Brillance', Prunus virginiana, and Prunus virginiana 'Canada Red'.

Diervilla lonicera (Eastern U.S.)	Rhus typhina (Eastern U.S.)	Symphoricarpos occidentalis
Fothergilla gardenii (Eastern U.S.)	Ribes aureum	Viburnum lentago (Eastern U.S.)

Adapted Shrubs List

Selections of the native species or similar species (from other continents climatologically similar to North America) with many of the same attributes as the native selections, but with improvements such as uniformity, habit, fall color, flower, etc.

Acer ginnala	Prunus tomentosa
Amelanchier alnifolia selections	Prunus virginiana 'Canada Red'
Arctostaphylos uva-ursi 'Massachusetts'	Rhus aromatica 'Gro-low'
Aronia selections	Rosa 'Nearly Wild'
Cornus baileyi	Rosa rugosa
Cornus sericea selections	Salix alba 'Vitellina'
Philadelphus lewisii 'Blizzard'	Salix 'Flame'
Philadelphus lewisii 'Cheyenne'	Sambucus canadensis selections
Physocarpus opulifolius var. nanus	Sorbaria sorbifolia
Potentilla fruiticosa 'Katherine Dykes'	Spiraea betulifolia 'Tor'
Prunus besseyi 'Pawnee Buttes'	Viburnum trilobum 'Wentworth'

SUSTAINABILITY, MORE THAN A WORD TO US AT GLACIER NURSERY, LLC: Over the last 38 years we have instituted numerous cost saving procedures that also contribute to reducing our carbon footprint and allow us to operate in an environmentally friendly manner. Below are a list of the more significant procedures employed by Glacier Nursery, LLC.

- Reusing plastic pots that are returned from our customers (we pay four cents per gallon). Each year, over 60 percent of our plantings are into reused pots.
- Reusing all our cull and discarded plants by grinding them into compost, thus avoiding the need for topsoil and other potting media components that would need to be purchased and delivered.
- Chipping all our tree tops and eliminating plant material burning at Glacier Nursery, LLC. The chips are added to our potting mix. Diseased trees are chipped and disposed off site.
- Reusing all our runoff water from irrigation. None of our irrigation water drains off the farm; we reuse all runoff and mix the used water, after chlorine treatment, with fresh water in our irrigation system.
- Old pallets are dismantled and used as blocking on outbound shipments. Many of our outbound trucks return with the blocks that are used to stabilize the loads, reducing the need for new blocks.
- Cardboard boxes and pallets we receive with inbound plants are re-utilized as packing for outbound shipments. Used pallets and pots are made available to passersby on our highway frontage, keeping these products out of landfills.
- Pesticides and fertilizers are banded or applied on individual crops rather than broadcast applications. This reduces the quantity of pesticides and fertilizers used.
- We practice integrated pest management systems that reduce frequency of pesticide applications as well as minimizes the use of pesticides with a warning label.
- Use of electronic communication with customers for ordering, invoicing, and payments reduces paper usage and mail expenses.

Native Evergreens List

Abies concolor (Eastern U.S.)	Larix occidentalis	Pinus contorta var. latifolia
Abies lasiocarpa	Picea engelmannii	Pinus ponderosa
Juniperus scopulorum	Pinus aristata	Pseudotsuga menziesii

Adapted Evergreens List

Selections of the native species or similar species (from other continents climatologically similar to North America) with many of the same attributes as the native selections, but with improvements such as uniformity, habit, fall color, flower, etc.

Picea pungens glauca selections *Juniperus communis var. montana Juniperus horizontalis* selections *Juniperus scopulorum* selections *Juniperus virginiana* selections *Thuja occidentalis* upright selections

Yew is highly toxic to all animals, though some are less susceptible to the poison such as certain seed eating birds and white-tail deer. While Yew is toxic all year, it is most toxic later in the season because of toxin build up.

	B&B BALL SPECIFICATIONS	8
<u>Height</u>	Ball Diameter	Approximate Wt Lbs
4'	24"	250
5'	28"	425
6'	28"	475
7'	28"	550
8'	32"	550
9'	32-36"	680
10'	32-36"	680
12'	36-44"	950

The above is only a **guide**. Plant species, root mass, soil type, and especially soil moisture are contributing factors to ball size and weight in addition to tree caliper. Height of evergreen trees is determined from the ball up to one half the length of the terminal growth, or pulling up the first full whorl beneath the leader and measuring to that height. Ball depth is approximately 70 percent of the diameter.

There are many different guidelines for planting balled and burlap trees and what follows is a procedure which accommodates those requirements: Handle the plant by the root ball not the top, being careful to avoid tearing the burlap or distorting the shape of the root ball. Avoid handling if the root ball is waterlogged. Dig the hole twice as wide as the root ball **but** only as deep as the root ball. Preferably hand dig the last 3-6" so the root ball sits on compacted or undisturbed soil and will not settle deeper than originally planted. Measure the depth of the root ball from the bottom of the ball to the point where the burlap begins angling or flaring away from the tree trunk. Verify the top of the root ball (as measured above) will be level, or slightly higher (3") than the existing grade once placed in the hole. Trees are often killed or have reduced vigor when planted too deep.

Place the tree in the hole with the twine, burlap, and basket attached to verify the correct depth and alignment, this makes it easier to make adjustments if needed. Then remove the twine, burlap, and the top two horizontal rings of the wire basket using wire cutters. Backfill with the native soil or a mix of no more than half soil amendments and native soil. Settle the soil with abundant water, mulch if desired, and stake the tree to avoid wind damage, placing the stakes outside the planting hole.

88	Perennials 89

To maintain attractive plants throughout the selling season, the perennial program requires numerous plantings to stage the crops. Most crops have two planting dates and many have three planting dates. This ensures customers receive plants that are not overgrown, but rather appropriately sized throughout the entire selling season.

We **do not** force our perennials into flower in the greenhouse. This is best for most landscapers and some retail customers because our plants are synchronized with Montana's weather and therefore are not as vulnerable to early season frost as forced perennials or plants brought in from warmer climates.

We do not force our perennials into flower in the greenhouse. This is best for most landscapers and some retail customers because our plants are synchronized with Montana's weather and therefore are not as vulnerable to early season frost as forced perennials or plants brought in from warmer climates.

Heights: (In flower)

S=Short (<12")

M=Medium (12-24")

T=Tall (>24")

Form:

Clump - Forms a single clump that thickens with time. Small clump - Small clump that stays small over time. Upright clump - Taller than wide clump that thickens with time.

Runners - Spread by rhizomes or stolons, sod forming and spreading.

Cool season grasses - Starts growing early in spring and performs better when temperatures are cool and has sufficent water during warm season.

Warm season grasses - Slow to start growing, especially in our climate and perform better during drought. Cut plants back to 4-6" in the spring.

DEER RESISTANT AND SUSCEPTIBLE PLANTS

Deer resistant plants, now there is a conundrum. Deer are very resilient and their foraging abilities rival those of their smaller rodent cousins, mice. Are any plants truly deer resistant? If the deer population is large enough or if forage is limited, they will eat just about any plant, any place, any time.

There are, however, some plants deer prefer not to eat and some that are their plants of choice. That is how this list was compiled. We selected six different university or governmental agency sources from the internet and noted an 'X' for "Resistant to Deer" and an "A" for "Attracts Deer," for each reference that was found. Thus, with a plant like Digitalis or Lamium that has six 'X's it is a good bet that these will not be bothered by deer.

This list is not complete but just for the plants we grow. The sources probably overlap some; that is, one source lists resistance and another source copies the work and the myth or fact is perpetuated. So, use this at your discretion, ask others what has worked, look in the landscape. What has been browsed what has not? And above all realize no plant is ever completely deer resistant.

Deer Resistant and Susceptible Plants

FLATHEAD VALLEY MONTANA

Glaster Nursery is located approximately 10 miles east of Kallspell at milepost #42 on Montana Highway 35.

Centered in the beautiful Flathead Valley of Northwest Montana, Glader Nursery is surrounded by fantastic outdoor recreation. Whether it be fishing, hiding, golfing, boating, skiing, anowmobiling, or just looking at our spectacular scenery, you will not be disappointed.

Why buy from Glacier Nursery, LLC?

- ONE STOP SHOPPING FIND ALL YOUR PLANT NEEDS AT ONE LOCATION. We have approximately 750 varieties of trees, shrubs, evergreens and perennials available for immediate pickup or shipment in spring, summer, and fall.
- GET WHAT YOU WANT, WHEN YOU NEED IT. We offer convenient and timely deliveries to your yard or job site. We offer deliveries on a weekly basis throughout the planting season to help you stay on schedule. Orders received by Thursday at 4:00 p.m. are delivered by the following Friday afternoon (delivery location and order size affect this schedule).
- WE HAVE APPROXIMATELY 2,500 B&B TREES AND 200,000 CONTAINER PLANTS in our yard on May 1, ready for immediate shipping throughout the summer, saving you from having to maintain a costly inventory.
- **PREMIUM GRADE** Northern grown nursery stock you can depend on, and prices that will help you stay competitive.
- **LET US BE YOUR PERSONAL SHOPPER.** If you have specific requirements for plants, our trained plant professionals will personally select the plants you need.
- **VOLUME DISCOUNT!** The more you buy, the more you save.
